Photographic Survey Corporation

Ottawa—chosen in 1857 by Queen Victoria to be Canada's National Capital.

The Parliament Buildings, in their jewel-like setting, now crown the height that was bare "Barracks Hill" a hundred years ago. Since that time each successive generation has played its part in the building of a city of interest and beauty and in the development of its all-important function as the administrative centre of a great and growing nation.

PREFACE

The Canada Year Book, the official annual compendium of information on the institutions and the economic and social development of the nation, may be said to have had its origin in the "Year-Book and Almanac of British North America for 1867", although this and succeeding volumes down to 1879 were published privately but with official blessing. Upon the passage of a general Statistics Act in 1886, an official reference volume was instituted under the title "Statistical Abstract and Record of Canada" and produced by the General Statistics Office of the Department of Agriculture. Upon the amalgamation of the General Statistics Office and the Census Office, the Year Book was remodelled in 1905 and issued under the title "The Canada Year Book, Second Series".

The new series of Canada Year Books witnessed the birth of the Dominion Bureau of Statistics in 1918 as the centralized statistical organization for Canada and, as the Bureau expanded its program of statistical compilation and analysis in keeping with the nation's development, the Canada Year Book has endeavoured to present the story through feature articles, statistical tables and analytical commentary designed to elucidate statistically and otherwise the essential social and economic elements in the progress of Canada. The present edition of the Canada Year Book has discarded its half-century-old cover for an attractive light blue buckram, bearing the Canadian coat of arms, and has widened its type measure and reduced the leading between the lines in order to accommodate more wordage per printed page, but its objective remains constant—to portray the essential elements of Canada's growth in a dignified, factual style within the covers of a single volume.

A number of special feature articles of current interest have been incorporated in the Canada Year Book 1956. These include "Mapping and Charting in Canada" (pp. 17-22); "The National Capital Plan" (pp. 30-34); "Scientific Management of Game Fish in Canada's National Parks" (pp. 35-39); "Geophysics in Canada" (pp. 43-49); "Astronomy in Canada" (pp. 49-55); "The Privy Council Office and Cabinet Secretariat in its Relation to the Development of Cabinet Government" (pp. 62-70); "Financial Administration of the Government of Canada" (pp. 101-107); "Mental Health" (pp. 248-253); "Tuberculosis" (pp. 254-257); "Poliomyelitis Vaccine" (pp. 258-260); "The Federal-Provincial Forestry Agreements" (pp. 459-466); "Canada's Mineral Industry 1954-55" (pp. 490-511); "Seasonal Unemployment in Canada" (pp. 758-766); "Traffic on the Great Lakes-St. Lawrence Seaway" (pp. 821-829); and "Marketing Farm-Produced Foods" (pp. 917-922).

In addition to the above-mentioned special articles, other features and revisions have been introduced in various chapters. Among these are a brief historical sketch of the Census with a statistical summary of the principal enumerations; an enlarged survey of scientific, medical and industrial research; line-maps showing concentration of pulp and paper manufacturing in Canada; an analysis of trends and developments in the fisheries industries; line-maps of manufacturing production in western Canada; a progress report on the construction of the St. Lawrence Seaway accompanied by a map; a further installment on oil and gas pipeline developments; a newly-integrated account of broadcasting in Canada, as well as the up-dating of basic material dealing with such subjects as agriculture, vital statistics, public health, forestry, mining, manufactures, domestic and foreign trade, hydro-electric power development, capital expenditure on construction, machinery and equipment, public finance, banking, insurance, labour, national income and expenditure, Canada's balance of international payments, and various aspects of national defence. Numerous charts and maps throughout the volume portray graphically the rapidly developing economy which is outlined in the Introduction (pp. viii-xix).

The concluding chapter presents much handy reference material listing Government information services, special articles published in earlier Year Books, federal legislation of the recent session of Parliament, official appointments, a Canadian chronology of events and a statistical table summarizing the economic progress of Canada since 1871.

In the Appendix certain material on Government (Chapter II) is brought up to date of going to press, including a listing of the personnel of the Ministries of five provincial governments elected to power during 1956.

A large folding map of Canada and a chart of the Federal Government are enclosed in the pocket on the inside back cover of the volume.

The present volume has been produced in the Canada Year Book Section by John F. McVea, Assistant Editor of the Year Book and Chief of the Section, with the assistance of Miss M. Pink, Miss C. Freeth and the Year Book Staff, under the general editorship and direction of Dr. C. C. Lingard, Director of the Information Services Division. Charts, graphs and all maps bound into the volume have been prepared for publication under the direction of J. W. Delisle, Senior Draughtsman of the Bureau.

The co-operation of numerous officials of the various Departments of the Federal and Provincial Governments and of this Bureau in the preparation of material for the Year Book is gratefully acknowledged. Credit by means of footnotes is given where possible either to the persons or to the branches of the public service concerned.

Information bearing on any errors or omissions and suggestions respecting methods of treatment are welcomed by the Director.

WEIGHTS AND MEASURES AND OTHER INTERPRETATIVE DATA

In Canada as a rule the Imperial system of weights and measures is followed. An exception however is the ton where, unless otherwise stated, the short ton of 2,000 lb. is meant. Billion where used represents 1,000 million.

The following table shows the weights and measures used in Canada in connection with the principal field crops and for wheat flour and fruits:—

	<i>Pounds per Bushel</i>		<i>Pounds</i>
Grains—		Fruits (standard conversions)—	
Wheat.....	60	Apples, per barrel.....	135
Oats.....	34	Apples, per box.....	43
Barley.....	48	Pears, per bushel.....	50
Rye.....	56	Plums “ “.....	50
Buckwheat.....	48	Cherries “ “.....	50
Flaxseed.....	56	Peaches “ “.....	50
Corn.....	56	Grapes “ “.....	50
Mixed grains.....	50	Pears, per box.....	42
All others.....	60	Strawberries, per quart.....	1·25
		Raspberries “ “.....	1·25
		Loganberries “ “.....	1·25

Wheat Flour—

1 barrel equals 196 pounds and approximately 4·5 bushels of wheat are used in the production of a barrel of flour.

Relative Weights and Measures, Imperial and United States

The following list of coefficients may be used to translate amounts expressed in one unit to the other. It must be borne in mind that where the list below refers to Imperial pint, quart and gallon, their equivalent in ounces is also in Imperial measure; likewise United States designations for these quantities are shown in the U.S. equivalent in ounces. The Imperial (or British) fluid ounce and the U.S. fluid ounce are different measures, 1 Imperial fluid ounce equalling 0·96 United States fluid ounce. Similarly 1 Imperial gallon equals 1·2 United States gallon.

1 Imperial pint=20 fluid ounces.	1 Imperial proof gallon=1·36 United States proof gallon.
1 United States pint=16 fluid ounces.	1 Short ton =2,000 pounds.
1 Imperial quart=40 fluid ounces.	1 Long ton=2,240 pounds.
1 United States quart=32 fluid ounces.	1 Barrel crude petroleum = 35 Imperial gallons.
1 Imperial gallon=160 fluid ounces.	
1 United States gallon=128 fluid ounces.	

FISCAL YEARS OF FEDERAL AND PROVINCIAL GOVERNMENTS

The fiscal year of the Federal Government and of each of the ten Provincial Governments ends on March 31.

Throughout the Year Book, fiscal year figures are indicated in the text and headings of tables; otherwise figures are for calendar years.

INTRODUCTION

THE CANADIAN ECONOMY IN 1955*

During 1955 economic activity in Canada recovered sharply from the mild contraction that had characterized the period mid-1953 to mid-1954. The output of goods and services, which had begun to rise in the latter part of 1954, expanded rapidly throughout 1955 and for the year as a whole was approximately 10 p.c. higher than in the full year 1954. The up-swing raised the Gross National Product to \$26,600,000,000 in 1955 compared with \$24,100,000,000 in the previous year. Since final product prices remained relatively stable, the increase reflected almost entirely an expansion in the volume of production, which showed the largest gain of any single postwar year. It may be recalled that in 1954 the volume of output declined by 3 p.c. while some increases in the labour force and productive capacity were taking place. These developments made possible the sharp increase in the volume of output in 1955. The increase over 1953, the previous peak year in terms of volume of production, was about 6 p.c.

Several important expansionary factors contributed to the 1955 growth in output. A rise of \$1,000,000,000 in personal expenditures on consumer goods and services led the advance in final purchases and, while all segments of consumer outlays increased, the major advance was recorded by the durable goods group. It is interesting to note that per capita personal consumption in volume terms in 1955 was about 12 p.c. above the 1949 level and that one-third of this increase occurred between 1954 and 1955. Per capita consumption of durable goods was 40 p.c. above the year 1949. Accompanying the 1955 advance in the consumer sector, residential construction outlays showed a gain of \$300,000,000 or about 25 p.c., reflecting both the sharp rise in personal incomes and the ready availability of mortgage funds. Consumer outlays and housing expenditures together accounted for more than half the increase in Gross National Expenditure in 1955.

Exports of goods and services, which declined in 1954, recovered strongly in 1955 rising by \$600,000,000 or 11 p.c. This strength in foreign demand for Canadian goods and services was associated with the marked recovery of business activity in the United States and the rising level of activity in overseas countries. The bulk of the gain in exports was concentrated in wood and wood products, iron and its productions and non-ferrous metals, with declines occurring in the agricultural products groups.

Turning to the investment sector, business outlays for plant, machinery and equipment absorbed \$300,000,000 of the \$2,500,000,000 increase in total output in 1955. It may be recalled that business investment outlays for new construction and machinery and equipment declined late in 1953 and early in 1954, after which time they remained relatively stable. During 1955, in response to a sharp rise in profits and the growing pressure of demand on existing capital facilities, business investment outlays began to rise and were moving upward strongly at year-end. Imports of machinery and equipment items were especially heavy in the last half of the year.

There were other expansionary factors in 1955: government expenditures for goods and services rose \$300,000,000, with gains occurring at all three levels; the larger grain crop contributed about \$300,000,000 to the gain in total Gross National Product; and the swing in business inventories from liquidation in 1954 to net accumulation in 1955 amounted to \$400,000,000. Under these stimuli, Canadian production rose at an uninterrupted pace throughout 1955, although a considerable part of both final and inventory demand was channelled into imports which rose by more than \$700,000,000 during the year. In the first half of 1955 the increase in final demand was closely paralleled by the rise in Canadian production and imports showed only a moderate increase. In the last half of the year however imports rose very sharply and a substantial portion of the gain in final purchases as well as the stepped-up inventory demand were met from foreign sources of supply. Thus the rise in Canadian production in the last half of 1955 was somewhat smaller than that occurring earlier in the year. This development reflected the fact that

* Prepared in the Research and Development Division, Dominion Bureau of Statistics.

in the latter part of 1955 the Canadian economy was approaching capacity production in some lines and the quarter-to-quarter increases in output were accordingly less substantial. At year-end, Gross National Product was running at a seasonally adjusted annual rate of \$27,400,000,000, about 3 p.c. above the annual average for 1955 as a whole.

In 1955 personal and business incomes continued to expand, mainly as a consequence of successive quarter-to-quarter gains in wages and salaries and in investment including corporation profits. Wages and salaries advanced approximately 7 p.c. above the 1954 level while investment income was up 20 p.c. and corporation profits 24 p.c. In addition there was an important increase in net income of farm operators resulting from the substantially higher level of crop production in 1955. National income as a whole was approximately 11 p.c. above the previous year.

The rising tempo of economic activity in 1955 was accompanied by a substantial increase in employment and a decline in unemployment. At year-end, the number of persons with jobs was about 4 p.c. higher than at the end of 1954 and the number of persons without jobs and seeking work was almost 20 p.c. lower. The number of persons with jobs in the non-agricultural sector rose by 7 p.c. during the year. Average hours worked per week in manufacturing increased in 1955 by about 1 p.c.

Prices on average were relatively stable during 1955. However, prices of non-agricultural primary materials began to edge upward more noticeably after mid-year while agricultural prices continued to decline. In particular prices of non-grain exports products (especially non-ferrous metals) showed increases, and the export price index of goods rose by 2 p.c. As the price of imported goods showed a smaller advance, a slight improvement in Canada's terms of trade took place in 1955. Construction material prices also increased somewhat in 1955, especially in the latter half of the year. The continued decline in agricultural prices in 1955 reflected the large stocks of grains and ample supplies of other agricultural products in Canada and abroad. The wholesale price index rose by 3 p.c. during the year while the consumer price index showed little change.

INDUSTRIAL PRODUCTION

All major industrial groups in the Canadian economy except fishing and trapping participated in the general expansion of economic activity during 1955. Contrasting with 1954 when production declined by about 3 p.c., the total physical volume of output in 1955 rose by 9 p.c., the largest advance of any postwar year. Contributing partly to this increase was the sharp gain in agricultural production, largely the result of the greater outturns of grain; output of livestock showed a more moderate advance.

Increased domestic and foreign demand for Canadian wood products resulted in greater activity in the forestry sector. Pulpwood production rose by about 4 p.c. and the output of sawmills 13 p.c. On the other hand, the fishing and trapping industries both declined. Landings of cod on the East Coast and of salmon, halibut and herring on the West Coast were considerably lower than in 1954.

The continued expansion of the mining industry was again a notable feature of the economic picture. The volume of mineral output attained a new record increasing nearly 16 p.c. above the 1954 level. This was the largest advance for any year since before the War and brought the volume of production index for the industry to a point 150 p.c. higher than in 1946. Supported by strong foreign demand, output of metals rose by 11 p.c. to surpass the previous record level established in 1941. Contributing substantially to the advance was the sharp gain in iron-ore shipments which increased 124 p.c. over 1954. Output of copper, nickel and zinc was also considerably greater, production of gold showed some improvement but lead and silver declined. The major non-metallics, asbestos and gypsum, reflected the tremendous construction activity both in Canada and abroad, rising 14 p.c. and 18 p.c., respectively, in 1955. Output of fuels as a whole advanced 28 p.c.; crude oil jumped 35 p.c. and natural gas 21 p.c. but coal, on the other hand, declined a further 1 p.c. Coal has shown a continuous decline since 1950 as the shift to other forms of energy has gained momentum.

Public utilities continued their expansionary trend; electric power production recorded a gain of more than 10 p.c. and gas distribution was up 7 p.c. compared with 1954.

In total, the volume of production of the primary industries, which account for about one-fifth of the Gross National Product, rose more sharply in 1955 than that of the secondary and service industries. Manufacturing production, representing about 30 p.c. of the total output, advanced by over 7 p.c. in 1955 and all major groups with the exception of transportation equipment contributed. As a result of the distinct gain in personal expenditure on consumer durables and in investment in new housing, plant, equipment and business inventories, output of durable manufactured goods rose by over 9 p.c.; non-durables increased 6 p.c. Among the durable industries, gains of between 10 and 15 p.c. were shown by wood products, iron and steel products, non-ferrous metal products, electrical apparatus and supplies and non-metallic mineral products. Production of primary iron and steel rose by 41 p.c. Despite a 30 p.c. increase in the output of motor vehicles, the transportation equipment industry was down by about 2 p.c. compared with 1954, largely as a result of major declines in shipbuilding, aircraft and railway rolling stock. All the principal industries within the non-durable manufacturing group increased their output, the major gains being shown by the rubber, textile and petroleum and coal industries. Beverages and tobacco products each advanced about 9 p.c. and pulp and paper nearly 6 p.c. Increases in other non-durable industries were more moderate.

Related indicators suggest that the construction industry recorded a marked gain over the preceding year. Residential starts and completions rose by 22 p.c. and 25 p.c., respectively. Reflecting the sharp advance in industrial activity and the accompanying pressure on existing capacity, the value of new non-residential construction rose by 7 p.c. in the same comparison.

The service industries as a whole continued their steady expansion as activity in all groups was at a higher level in 1955. The volume of retail trade was up about 9 p.c.; all major trades recorded increases, motor vehicle dealers showing the sharpest gain, followed by furniture and appliance stores and department stores.

The transportation, storage and communication group of industries was at a considerably advanced level of activity in 1955. The number of railway revenue cars loaded was 10 p.c. higher than in the preceding year as a result of major increases in the transportation of iron ore, motor vehicles, building materials, lumber and timber, woodpulp, fertilizers and petroleum products; by contrast, grain, grain products and farm machinery were down from a year earlier. Among the other transportation industries, air transport and oil pipelines continued their spectacular growth while trucking and shipping showed more moderate advances. Storage activity was at a lower level because of reduced receipts and shipments of grain. The communications group continued to expand as the result of increased demand for telephone and telegraph service and further major advances in radio and television transmission services.

The majority of other service industries recorded advances over 1954; among these were finance, insurance and real estate services, government service, education and health services and business services.

NATIONAL INCOME AND GROSS NATIONAL PRODUCT

Labour income rose to nearly \$12,900,000,000 in 1955 or more than 7 p.c. above the level of 1954, after having gained only 2 p.c. between 1953 and 1954. The rise in 1955 was associated with a 5 p.c. increase in the number of paid workers and a 3 p.c. advance in average weekly earnings in the major non-agricultural industries. The 3 p.c. gain in average weekly earnings reflects both an increase in average hours worked per week and in average rates of pay. Since average consumer prices remained relatively unchanged in 1955, the increase in labour income from the previous year represented a further advance in "real" earnings.

SELECTED ECONOMIC HIGHLIGHTS 1954 AND 1955

GROSS NATIONAL PRODUCT (Seasonally Adjusted Annual Rate)

GAINS IN WAGES AND SALARIES AND CORPORATION PROFITS (Seasonally Adjusted Annual Rate)

CONSUMER GOODS AND SERVICES AND INVESTMENT IN NEW HOUSING (Seasonally Adjusted Annual Rate)

EXPORTS AND IMPORTS (Seasonally Adjusted Annual Rate)

* Note that, in this Chart and in those on the following three pages, where reference is made to "seasonal adjustment", this means that, to facilitate comparison between quarters and to indicate at what levels the various sectors of the economy are operating, the data have been adjusted for seasonal variation. That is, the average amount that activity normally rises or falls as a result of changing seasons has been eliminated, so that the underlying movements stand out more prominently.

THE RISE IN INDUSTRIAL PRODUCTION IN 1955 WAS WIDESPREAD, WITH MAJOR GAINS IN DURABLE GOODS MANUFACTURING AND IN MINING

The changes in production were paralleled to a large extent by changes in the industrial components of labour income in 1955. Wages and salaries in construction experienced the largest relative gain, rising 14 p.c. over the 1954 level. The increase in the finance and service industries amounted to approximately 10 p.c. and in the manufacturing and the distributive trades to 6 p.c. The primary industry group showed contrasting movements; substantial increases occurring in the mining and forestry industries were offset in part by some fall-off of wages and salaries in agriculture and fishing. These variations had no appreciable effect on the distribution of income earned by the main industrial groups.

The quarter-to-quarter movement of labour income was continuously upward in 1955 although the rate of growth slowed somewhat after mid-year. In the fourth quarter, labour income was running at a seasonally adjusted annual rate of \$13,300,000,000, or 3 p.c. above the annual average for the year as a whole.

Investment income amounted to \$4,500,000,000 in 1955, an increase of 20 p.c. over 1954. Almost three-fourths of that gain is attributable to a sharp advance in corporation profits which are estimated to have risen by about 24 p.c. to reach a new peak of \$3,000,000,000. This is the first increase in corporation profits since 1951 when, responding to the up-swing in industrial activity following the outbreak of hostilities in Korea, they amounted to \$2,800,000,000. It may be noted that in 1951 inventory valuation gains attributable to rising prices accounted for a substantial part of total profits, whereas in 1955 inventory gains of this nature were much more moderate.

All other elements of investment income showed gains in 1955. Interest and net rental receipts of persons rose by about 10 p.c., reflecting increases in average rents, growth in the number of housing units, and higher deposit interest paid by banks. Government investment income also increased 10 p.c., associated in large part with higher profits of government business enterprises.

Accrued net income of farm operators from farm production in 1955 amounted to \$1,400,000,000, compared with \$1,100,000,000 in the previous year. This increase is entirely attributable to the higher value of crop production but it may be noted that a large proportion of the total grain crop went into inventory accumulation in 1955 and much of the increase in production is represented by net additions to farm stocks of grain. Farm cash income declined slightly in 1955, increased returns from wheat, flax, potatoes and cattle being more than offset by lower returns from oats, barley, rye and hogs.

Net income of other unincorporated business advanced by about 7 p.c. in 1955 to a level of \$1,800,000,000. This rise was concentrated in construction and retail trade, the former reflecting a higher volume of residential housing construction.

Indirect taxes less subsidies amounted to \$3,200,000,000 in 1955, an increase of 9 p.c. over 1954. At the federal level the increase in indirect taxes amounted to 8 p.c. The largest single increase occurred in customs import duties which rose by 17 p.c. responding to the sharp rise in merchandise imports of 15 p.c. Excise taxes and excise duties increased by 6 p.c. and 8 p.c., respectively, reflecting a marked increase over the previous year in shipments of goods subject to these types of taxes.

Provincial indirect taxes were higher by 13 p.c. in 1955. Increased expenditures by consumers were mirrored in higher collections of general retail sales and gasoline sales taxes at the provincial level, while higher activity in the extractive industries such as mining and forestry contributed to an increase in public domain revenues. The increase of 5 p.c. in municipal indirect taxes in 1955 can be ascribed mainly to higher real estate and personal property taxes, which continued to move upward as investment in residential and non-residential construction increased.

COMPONENTS OF GROSS NATIONAL EXPENDITURE

As in 1954, the major expansionary force in the economy in 1955 was personal expenditure on consumer goods and services, which rose by 7 p.c. during the year to reach \$16,800,000,000. The increase was associated with a sharp rise in the level of personal

income which recorded the largest per capita gain (in real terms) of the postwar period. The rise in durable goods purchases in 1955 was especially marked, with a gain of about 11 p.c., while non-durable goods purchases and outlays for services showed gains of 6 and 7 p.c. respectively. Non-durable goods purchases accounted for about one-half of the total gain in consumer outlays, although in percentage terms the increase was only about half as great as that for durable goods purchases. While there were marked shifts in the composition of consumer prices in 1955, on average they showed little change, so that the volume increase in total consumer expenditure paralleled the value increase of 7 p.c.

In the durable goods group, some of the more striking increases in 1955 occurred in the following items: unit sales of new passenger cars were up by 25 p.c. over 1954 (the gain from the first to second quarter was particularly noteworthy); refrigerator shipments were up 14 p.c.; washing machine shipments 25 p.c.; and television set shipments 22 p.c. Sales of furniture and appliance stores also showed major gains. Prices of durable goods in 1955 were about 5 p.c. below the average for 1954 so that the volume gain in durable goods purchases amounted to about 17 p.c. compared with a value gain of 11 p.c. The advance in total durable goods sales over 1954 was accompanied by an increase in instalment credit outstanding.

The major gain in non-durable goods purchases in 1955 was in the food component, which rose by 5 p.c. In contrast to 1954 when purchases of clothing declined, there was a modest gain in that item in 1955. Gains in other sub-components of the non-durable goods group were widespread. Since prices of non-durable goods were relatively stable, the volume gain in non-durable expenditure in 1955 was approximately the same as the value increase of 6 p.c.

Consumer outlays for services continued to move upward during the year. The advance was accompanied by a price increase, so that the volume of consumer services in 1955 was somewhat less than the value increase.

In the fourth quarter of 1955 personal expenditure on consumer goods and services was running at a rate of \$17,200,000,000, about 2 p.c. above the average for the year 1955 as a whole.

Purchases of goods and services by all levels of government (federal, provincial and municipal) amounted to \$4,600,000,000 in 1955, 6 p.c. above the 1954 level. The increase over 1954 reflected gains in federal and provincial capital investment outlays, the expansion of municipal facilities associated with the high level of house-building activity, higher outlays for salaries and wages and slightly higher defence expenditures. Defence outlays did not constitute a major expansionary influence in 1955 but continued to provide an important sustaining element.

Gross domestic investment in fixed durable assets reached an alltime peak of \$5,300,000,000 in 1955, 13 p.c. above 1954. This gain provided an important stimulus to final demand in 1955, in contrast to 1954 when declines occurred in non-residential construction and investment in machinery and equipment. The year-end level of gross domestic investment was at a seasonally adjusted annual rate of \$5,800,000,000, 9 p.c. above the 1955 yearly average. The year-to-year increase over 1954 was spread among the three major groups—housing, non-residential construction, and new machinery and equipment. The advance in housing contributed about one-half of the total gain; new investment in machinery and equipment accounted for less than one-third, and non-residential construction provided the remainder.

The rise in construction activity was matched by increased employment in the construction industry as measured by the labour force survey. For 1955 as a whole, total construction employment was 10 p.c. above the 1954 average, while in the fourth quarter of 1955, the gain was 13 p.c. over the corresponding period of the previous year. Slightly higher prices for construction materials and an increase in wage rates accompanied these developments in 1955. In the fourth quarter comparison, the increase in both wage rates and building material costs was substantially greater than the average gain for the full

year. Towards the end of 1955 the supply of certain building materials, such as cement and steel was becoming rather tight, though the shortage did not appear to have held back the investment program to any appreciable extent.

A variety of influences was responsible for the increase in investment in 1955. In the field of housing construction, the larger supply of mortgage funds made available by the banking system, along with a rising level of personal disposable income, made possible a striking gain in the number of housing units built. The value of housing construction in 1955 was estimated at \$1,476,000,000, up 27 p.c. from 1954.

The influences affecting investment in non-residential construction and machinery and equipment were somewhat different from those affecting housing. The downturn in late 1953 and early 1954 made available excess capacity in some portions of the economy, and this slack was gradually utilized as the recovery gained ground. However, as 1955 progressed the expansion began to press upon existing capacity, and plant and equipment investment programs were sharply increased to meet current and anticipated demand.

New non-residential construction was valued at \$1,775,000,000 in 1955, up 7 p.c. from the preceding year. However, the pick-up did not appear strongly until the last half of the year, when the seasonally adjusted annual rate was running at about \$1,900,000,000, or 13 p.c. above 1954.

Investment in new machinery and equipment amounted to \$2,017,000,000 in 1955, up 10 p.c. from 1954 but still slightly below the 1953 peak year. However, by the fourth quarter of 1955 the annual rate of investment in machinery and equipment reached \$2,300,000,000 and was at a rate equal to the previous high in the third quarter of 1953. The volume of machinery investment in the fourth quarter was still below the 1953 peak, inasmuch as prices of these items have risen somewhat over the past two years. Most of the increase in machinery investment in 1955 was met through larger imports, which rose sharply over the previous year.

Total inventory investment amounted to \$450,000,000 in 1955, compared with a liquidation of \$280,000,000 in the previous year. This swing in inventory investment of \$730,000,000 made a substantial contribution to the higher level of Gross National Product in 1955. The turn-around was partly a reflection of the larger grain crop in 1955 and partly a reflection of the pronounced up-swing in final demand which appeared to require higher levels of business inventory holdings to prevent a further fall-off in stock sales ratios. It should be noted, however, that certain industrial and wholesale prices were rising in 1955 and that about one-half of the value swing in business inventories can be accounted for by these price factors. In terms of volume change, the shift in total inventories from liquidation in 1954 to accumulation in 1955 amounted to about one-third of the real increase in Gross National Product.

The major part of the business inventory build-up in 1955 occurred in manufacturing and in wholesale and retail trade. The first two of these sectors had experienced marked liquidations of inventory in 1954, so that they also accounted for the largest share of the turn-around in business inventories between 1954 and 1955.

The accumulation of business inventories in 1955, amounting to \$257,000,000, took place at different rates throughout the year. In the first quarter there was a very substantial build-up reflecting in large part the accumulation of automobile inventories at the factory level. In the second and third quarters final purchases of goods were increasing sharply and additions to inventories were moderate. By the fourth quarter of the year, while final purchases continued to expand, the combined supply of goods coming from domestic production and the high rate of imports in the later part of the year were sufficient to add substantially to business stocks on a seasonally adjusted basis. This accumulation in the fourth quarter was spread fairly generally throughout the industrial groups, with increases occurring (after allowing for seasonal variation) in motor vehicles, parts and accessories, iron and steel products, electrical apparatus and supplies, clothing, paper products and in a wide range of other commodities.

Responding to the recovery of industrial activity in the United States, strong overseas demand for Canadian goods, a rising level of Canadian production and higher consumer and investment outlays, exports and imports of goods and services rose to new levels in 1955. The gain in exports was 11 p.c., and in imports 14 p.c., bringing the annual levels to \$5,700,000,000 and \$6,300,000,000, respectively. These advances in exports and imports of goods and services were mainly attributable to a sharp recovery in commodity trade in 1955, following the declines of the previous year. However, payments and receipts on invisible items were also up sharply in 1955.

In the export group, gains in forest products, minerals, metals and chemicals were especially noteworthy. Sharp increases occurred in exports of iron ore, chemicals and crude petroleum, made possible by new industrial capacity in Labrador and Western Canada. Gains in wood and wood products, and non-ferrous metals were of particular significance in the total export increase, the latter group reflecting to a large extent higher prices. The sharp advances in the commodity exports more than offset a decline in shipments of grain and in some types of manufactured products in 1955. In the fourth quarter of 1955, the annual rate of exports of goods and services was \$5,800,000,000, 2 p.c. above the average for the year 1955 as a whole.

Even more striking than the gain in exports in 1955 was the sharp advance in commodity imports, particularly in the latter half of the year. The major part of the increase in imports was from United States sources, and in the third and fourth quarters of 1955 imports from that country were 23 p.c. and 28 p.c., respectively, above the same period of 1954. While the increase in imports was widespread, the major gains occurred in metal products including primary steel, industrial machinery and equipment, automobiles and parts, aircraft, electrical apparatus and other kinds of hard goods. These increases were related to the recovery of investment in plant and equipment and consumer outlays for durable goods in 1955. Imports of textile materials and products also rose sharply in 1955, associated with a pick-up in clothing and textile production, and higher consumer expenditure on clothing. In the fourth quarter, imports of goods and services were running at a seasonally adjusted annual rate of \$7,000,000,000, almost 10 p.c. above the annual average for the full year 1955.

Personal income amounted to \$19,800,000,000 in 1955, a gain of 9 p.c. over the previous year. The difference in this increase and the 11 p.c. gain in national income, was mainly a reflection of the fact that corporation profits, included in national income, rose much more sharply in 1955 than dividend payments to Canadians. It may be recalled that in 1954 personal income showed a small advance in the face of a decline in national income. This difference was again partly a reflection of the relatively greater stability of dividend payments, which continued to be maintained at a time when profits were declining.

All components of personal income were higher in 1955. Of the \$1,600,000,000 increase over the previous year, \$900,000,000 was accounted for by higher wages and salaries, \$300,000,000 by higher farm income, and the balance by government transfer payments, interest, dividends and net rental income, and net income of non-farm unincorporated business.

Turning to the expenditure side, personal expenditure on consumer goods and services rose by 7 p.c. in 1955; personal direct tax collections were about 4 p.c. higher reflecting for the most part a sharp increase in succession duty collections; personal income tax collections were level with the preceding year, reflecting mainly the inter-action of a higher level of personal income in 1955 and a reduction of the personal income tax rate effective from mid-year.

Personal saving in 1955 amounted to \$1,500,000,000 compared with \$1,000,000,000 in 1954, an increase attributable in large part to the higher grain crop in 1955. As a percentage of personal income, personal saving made up 7.5 p.c. of the personal income total in 1955 compared with 5.3 p.c. in 1954. Gross national saving rose by 30 p.c. in 1955, from \$4,000,000,000 in 1954 to \$5,200,000,000. This increase was attributable to

higher levels of personal and business saving, each of which contributed about \$500,000,000 to the total gain of \$1,200,000,000 and to a larger consolidated government surplus, which contributed an additional \$200,000,000. National saving was 20 p.c. of gross national product in 1955 compared with 17 p.c. in 1954 and 20 p.c. in 1953. Despite the sharply increased level of the nation's saving in 1955, the amount available was nevertheless insufficient to support the expanded program of capital investment in housing, plant, machinery and equipment, and inventories. Thus, while national saving was at a rate of \$5,200,000,000, the total domestic investment program including inventories amounted to \$5,700,000,000. The short-fall in the nation's saving was met again by drawing upon foreign resources, and the deficit on current account in 1955 amounted to \$651,000,000, an increase of \$225,000,000 over the deficit sustained in 1954.

PART I.—GEOGRAPHY*

Canada comprises the greater part of the northern half of North America lying between the United States, Alaska and Greenland. In longitude Canada extends from Cape Spear, Newfoundland, at 52°37'W, to Mount St. Elias, Yukon Territory, at 141°W, a distance of 88°23'. In latitude it stretches from Middle Island, Lake Erie, at 41°41'N, to the North Pole. The northernmost point of land is Cape Columbia on Ellesmere Island, at 83°07'N. Thus Canada is essentially a western and a northern country, a fact of increasing strategic significance. Moreover the climatic, vegetation and soil belts are drawn out into broad east-west zones, thereby supporting the east-west orientation of the main frontier of the country and aiding Canada's historic east-west development.

The shape of Canada is like a distorted parallelogram with its four corners making important salients. In the north the salient formed by the Arctic Archipelago, which penetrates deep into the Arctic basin, guards the northern approaches to the continent from Europe and Asia and makes Canada neighbour to the Union of Soviet Socialist Republics. In the south the salient of peninsular Ontario thrusts far into the heart of the United States. In the east the salient of Labrador and the Island of Newfoundland commands the shortest crossings of the North Atlantic Ocean and links Canada geographically with the United Kingdom and France. In the west the broad arc of land between Vancouver in southern British Columbia and Whitehorse in Yukon Territory provides

* Prepared by the Geographical Branch, Department of Mines and Technical Surveys, Ottawa.

the shortest crossings of the North Pacific Ocean between continental North America and the Far East. Canada thus stands at the crossroads of contacts with the principal powers and some of the most populous areas of the world.

In size, Canada is the largest country in the Western Hemisphere and the second largest country in the world. Its area of 3,845,774 sq. miles may be compared with that of the Union of Soviet Socialist Republics, 8,598,701 sq. miles,* the United States of America (including Alaska), 3,608,653 sq. miles,* and Brazil, 3,288,050 sq. miles.* It is more than forty times the size of the United Kingdom and eighteen times the size of France. This immense size however while multiplying certain resources and seeming to afford much scope for settlement has imposed its own burdens and limitations, particularly because much of the land is mountainous and rocky or is under an Arctic climate. The developed portion is probably not more than one-third of the total; the occupied farm land is only 7.6 p.c. and the currently accessible forested land 16.1 p.c. of the total. The population of Canada, estimated at 15,601,000 on June 1, 1955, may be compared with 162,414,000* for the United States (1954) and with 57,098,000* for Brazil (1954).

1.—Approximate Land and Freshwater Areas by Province and Territory

NOTE.—A classification of land area as agricultural, forested, etc., is given at p. 23.

Section 1.—Physical Geography

Subsection 1.—Physiographic Divisions

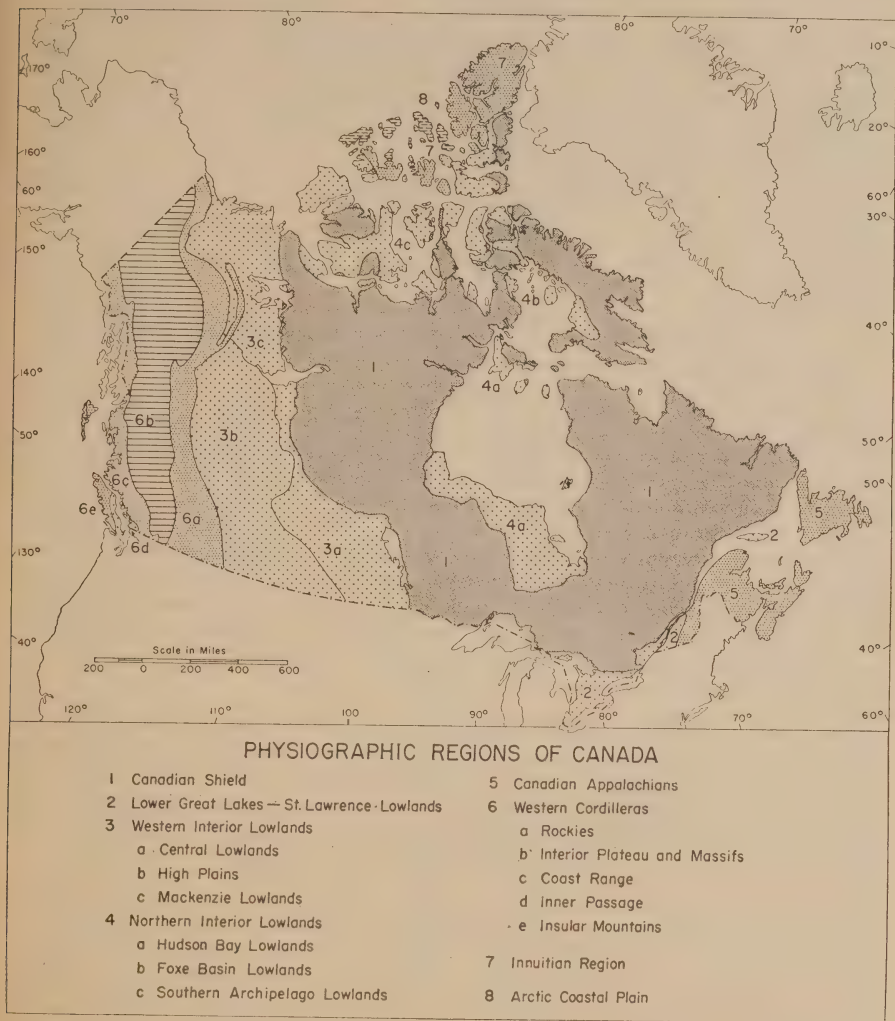

Canada includes each of the major characteristic structures of the North American continent with the exception of the Atlantic coastal plain. Structure tends to dominate relief to a remarkable degree even though its effects have been modified by glacial and river erosion or deposition. Consequently structural regions have become main physiographic divisions. Basically Canada consists of a central rocky upland, or shield, sloping down to flanking basins filled with sedimentary strata and rising again at its margins to mountains of folded rocks, interspersed with igneous intrusions.

Eight physiographic regions dominate the country: (1) The Canadian Shield; (2) the Lower Great Lakes-St. Lawrence Lowlands; (3) the Western Interior Lowlands of the Prairies and the Mackenzie basin; (4) the Northern Interior, that is, Hudson Bay,

* *United Nations Statistical Yearbook, 1954.*

Lowlands and those of the southern Arctic Archipelago; (5) the mountains of the Canadian Appalachians; (6) the Western Cordilleras; (7) the Arctic ranges, the name for which is the Innuition Region; and (8) the Arctic Coastal Plain.

A comprehensive treatment of these eight regions is given in the 1955 Year Book, pp. 3-10.

Subsection 2.—Inland Waters

The inland waters of Canada (not including salt water areas that are a part of Canada) are extensive, constituting over 6 p.c. of the total area of the country. They are best studied by segregating the main drainage basins as shown in Table 2.

2.—Drainage Basins

Drainage Basin	Area Drained ¹	Drainage Basin	Area Drained ¹
	sq. miles		sq. miles

¹ Areas are approximate and are exclusive of those portions of the basins of all rivers that lie in United States territory.

During the early period of exploration and development the waterways of Canada were the sole means of access to and travel in the interior. This function is still of importance to much of the country particularly in the north where most traffic moves by water or by air. In the settled areas however the construction of roads and railways has reduced the role of the waterways as transportation routes but they have assumed other functions. Some, particularly in the Canadian Shield area and the Cordilleran region, have been harnessed for the production of electric power. Others, mainly in southern Alberta and Saskatchewan, have been dammed to provide water for irrigation purposes. In Eastern Canada many of the rivers have been controlled in an over-all program of flood prevention and conservation of renewable resources or to provide dependable supplies of water for industrial and domestic purposes.

In Eastern Canada the Great Lakes and St. Lawrence drainage basin dominates all others and forms an unequalled system of navigable inland waterways through a region rich in natural and industrial resources. From Duluth, Minn. at the head of Lake Superior to Belle Isle at the entrance to the Gulf of St. Lawrence the distance is 2,280 miles. The St. Lawrence waterway and its tributaries, most of which have lakes available for reservoiring, have very large developed and potential power resources.

The greater part of Canada drains into Hudson Bay and the Arctic Ocean; the Nelson River drainage is exceptional in running *through* the most arable and the most settled part of Western Canada but otherwise the rivers of the West, east of the Rockies, run *away* from the settled areas towards the cold northern salt waters and this adversely affects their industrial utility. The Mackenzie River, which drains Great Slave Lake, is, with its headwaters, the longest river in Canada (2,635 miles) and its valley constitutes the natural transportation route through the Northwest Territories to the Arctic Ocean. From Fort Smith on the Slave River large river boats run without any obstruction to Aklavik on the delta of the Mackenzie, a distance of 1,292 miles. Table 3 gives the lengths of the principal rivers with their tributaries classified according to the four major drainage basins.

3.—Lengths of Principal Rivers and Their Tributaries

NOTE.—In this table the tributaries and sub-tributaries are indicated by indentation of the names. Thus the Ottawa and other rivers are shown as tributary to the St. Lawrence, and the Gatineau and other rivers as tributary to the Ottawa.

Drainage Basin and River	Length miles	Drainage Basin and River	Length miles

The outstanding lakes are of course the Great Lakes, though only part of these are in Canadian territory. The International Boundary between Canada and the United States passes through Lakes Superior, Huron, St. Clair, Erie and Ontario. Details are given in Table 4.

4.—Elevations, Areas and Depths of the Great Lakes

There are no tides in the Great Lakes although considerable variation in water levels is occasioned by strong winds.

Other large lakes of Canada, ranging in area from 9,000 to 12,000 sq. miles, are Lake Winnipeg, Great Slave Lake and Great Bear Lake. Apart from these, notable for size, there are innumerable lakes scattered over that major portion of Canada lying within the Canadian Shield. In an area of 6,094 sq. miles, accurately mapped, south and east of Lake Winnipeg, there are 3,000 lakes. In an area of 5,294 sq. miles, accurately mapped, southwest of Reindeer Lake in Saskatchewan, there are 7,500 lakes.

5.—Elevations and Areas of Principal Lakes by Province

NOTE.—Areas given are for mean water levels. For those reservoirs and lakes for which two elevations are given, HW means high water, LW low water, and N normal level.

Subsection 3.—Coastal Waters

The coast line of Canada, one of the longest of any country in the world, comprises the following estimated milages:—

Mainland—

Atlantic, 6,110; Pacific, 1,580; Hudson Strait, 1,245; Hudson Bay, 3,155; Arctic, 5,770; total, 17,860 miles.

Islands—

Atlantic, 8,680; Pacific, 3,980; Hudson Strait, 60; Hudson Bay, 2,305; Arctic, 26,785; total, 41,810 miles.

A comprehensive description of the coastal waters of Canada would require information from sciences such as oceanography, marine biology and meteorology. However, the basic factor in any study of the oceanic-continental margin is the physical relief of the sea floor and the scope of the information presented here is therefore restricted to this and a few salient features of the Atlantic, Arctic and Pacific marginal seas surrounding Canada. Further details are given in the 1947 Year Book, pp. 3-12.

Atlantic.—Along this coastal area, the sea has inundated valleys and lower parts of the Appalachian Mountains as well as those of the Canadian Shield. The submerged Continental Shelf, protruding seaward from the shore, effects the transition from continental

to oceanic conditions. This Shelf is distinguished by great width and diversity of relief. From the coast of Nova Scotia its width varies from 60 to 100 miles, from Newfoundland 120 to 50 miles (at the entrance of Hudson Strait), and northward it merges with that of the Arctic Ocean. The outer edge of the Shelf, known as the Continental Shoulder, is of varying depths of from 100 to 200 fathoms before the Shelf suddenly gives way to the steep declivity leading to abyssal depths. The over-all gradient of the Atlantic Continental Shelf is slight but the whole area is studded with shoals, plateaux, banks, ridges and islands and the coasts of Nova Scotia and Newfoundland are rugged and fringed with islets and shoals. Off Nova Scotia the 40 fathom line lies at an average of 12 miles from the shore and constitutes the danger line for coastwise shipping. The whole floor of the marginal sea appears to be traversed by channels and gullies cutting well into the Shelf.

The main topographical features of the Atlantic marginal sea floor are attributed to glacial origin but land erosion is an important factor. Eroded materials are carried seaward by rivers, ice and wind, and wave action against cliffs and shorebanks washes away enormous masses that are deposited over the surrounding sea floor. The topography of the continental sea floor is therefore constantly changing and navigation charts of Canada's eastern seaboard must be continuously revised.

Arctic.—The submerged plateau protruding from the northern coast of North America is a major part of the Great Continental (or Polar) Shelf surrounding the Arctic Ocean on which lie all the Arctic Islands of Canada, Iceland, Greenland and most of those of Europe and Asia. This Shelf develops its maximum width on the 80th meridian of west longitude where it extends from the south of James Bay to the north coast of Ellesmere Island, a distance of over 2,000 miles.

The floor topography of this continental margin is somewhat hypothetical but sufficient has been charted to indicate an abrupt break at the northern oceanward edge. This steep continental terrace borders the whole western side of the Canadian Archipelago and constitutes one of the most striking and significant features of the Polar regions. From this declivity, deep well-developed troughs cut by glaciers enter between the western group of islands. A ridge across Davis Strait on which the depth is about 200 fathoms separates this basin from the open Atlantic.

Hudson Bay and Hudson Strait bite deeply into the continent. Hudson Bay is an inland sea 250,000 sq. miles in area having an average depth of about 70 fathoms; the greatest charted depth in the centre of the Bay is 141 fathoms.

Hudson Strait separates Baffin Island from the continental coast and connects Hudson Bay with the Atlantic Ocean. It is 430 miles long and from 37 to 120 miles wide and its greatest charted depth of 481 fathoms is close inside the Atlantic entrance. Great irregularities of the sea floor are indicated but except in inshore waters few navigation hazards have been located.

Pacific.—The marginal sea of the Pacific differs strikingly from the other marine zones of Canada. The hydrography of British Columbia is characterized by bold, abrupt relief—repetition of the mountainous landscape. Numerous inlets penetrate the mountainous coast for distances of 50 to 75 miles. They are usually a mile or two in width and of considerable depth, with steep canyon-like sides. From the islet strewn coast, the Continental Shelf extends from 50 to 100 sea miles to its oceanward limit where depths of about 200 fathoms are found. There the sea floor drops rapidly to the Pacific Deep, parts of the western slopes of Vancouver Island and the Queen Charlotte Islands lying only four miles and one mile respectively from the edge of the declivity. These great detached land masses are the dominant features of the Pacific marginal sea. Along the whole coast continuous navigation is afforded through an inside passage sheltered from the sea by a protective barrier of islands. As is to be expected in a region so irregular in hydrographic relief shoals and pinnacle rocks are numerous, necessitating great caution in navigation.

Subsection 4.—Islands

The largest islands of Canada are in the north. They all experience an Arctic climate and extend from the islands in James Bay to Ellesmere Island which reaches 83°07'N. Those in the District of Franklin lie north of the mainland of Canada and are generally referred to as the Canadian Arctic Archipelago. Those in the extreme north however which lie north of the M'Clure Strait—Viscount Melville Sound—Barrow Strait—Lancaster Sound water passage are known as the Queen Elizabeth Islands.

On the west coast Vancouver Island and the Queen Charlotte Islands are the largest and the most important but the coastal waters are studded with many small rocky islands.

The Island of Newfoundland forming part of the Province of Newfoundland, the Province of Prince Edward Island, Cape Breton Island forming part of the Province of Nova Scotia, Grand Manan and Campobello Islands forming part of the Province of New Brunswick, Anticosti Island and the Magdalen group included in the Province of Quebec are the chief islands off the eastern coast.

Notable islands of the inland waters include Manitoulin Island (1,068 sq. miles in area) lying in Lake Huron, the so-called Thirty Thousand Islands of Georgian Bay and the Thousand Islands in the outlet from Lake Ontario into the St. Lawrence River.

Subsection 5.—Mountains

The predominant orographical feature in Canada is the Great Cordilleran Mountain System which contains many peaks over 10,000 feet in height. The highest peak in Canada is Mount Logan in the St. Elias Mountains of Yukon Territory, which rises 19,850 feet above sea level. The highest elevations in other parts of the country are shown in Table 7.

Section 2.—Main Physical and Economic Features of the Provinces

Politically Canada is divided into ten provinces and two territories. Each of the provinces is sovereign in its own sphere, as set out in the British North America Act 1867 and its amendments, and as new provinces have been organized they have been granted political status equivalent to that of the original provinces. The Yukon and Northwest Territories, with their present boundaries, are administered by the Federal Government. The chief physical and economic features of each of the provinces and of the territories are reviewed below. Details of resources and their development are given in later chapters.

Newfoundland.—Newfoundland, once the oldest colony of the British Empire, is the newest and most easterly province of Canada. It comprises the Coast of Labrador, an area of 112,630 sq. miles on the mainland, and the Island of Newfoundland. Separating the two portions is the Strait of Belle Isle, $9\frac{1}{2}$ miles in width at its narrowest point. From Nova Scotia across Cabot Strait the distance is 70 miles. The Island is triangular in shape, the three sides each being about 320 miles long, and it has an area of 42,734 sq. miles. The climate of the Island is temperate, having cool summers and mild winters. Climatic conditions in Labrador are more severe.

The Island has low, rolling relief, with its highest elevations in the west where summits in the Long Range Mountains exceed 2,500 feet. Much of the surface is barren and rocky and has innumerable ponds and swamps. Most of the land is unsuitable for farming. The river valleys and the west coast are thickly forested and support a thriving woodpulp industry. The deeply indented coast line has many harbours providing safe anchorage for the fishing vessels that support the important fishing industry. Fishing, mainly for cod, is carried on along the coasts of Newfoundland and Labrador and on the Grand Banks. The Province of Newfoundland has extensive mineral deposits. Iron ore is mined from the huge Wabana deposits on Bell Island and production of iron ore from the large hematite deposits in the Labrador-Quebec region commenced in 1954 following completion of the 360 mile railway to connect the deposits with the port of Seven Islands. Lead-zinc-copper ore is mined at Buchans in the interior of the Island. The vast water-power resources of Labrador are in the first stages of development.

Prince Edward Island.—This, the smallest province of Canada, is about 120 miles in length with an average width of 20 miles and an area of 2,184 sq. miles. Prince Edward Island lies 10 to 20 miles off the mainland, east of New Brunswick and north of Nova Scotia, and is separated from these Provinces by Northumberland Strait.

The Island attains an altitude of about 450 feet above sea level and is almost trisected by the deep indentations of Malpeque Bay and by the mouth of the Hillsborough River, which nearly meets Tracadie Bay on the north side. Its rich, red soil and red sandstone formations are distinctive features. The climate is tempered by the surrounding waters of the Gulf of St. Lawrence and, combined with fertile soil and sheltered harbours, offers great inducements to the pursuits of agriculture and fishing. The Province is noted for its production of seed potatoes, its lobster canneries, oyster beds and fur farms.

Nova Scotia.—The Province of Nova Scotia is 381 miles in length by 50 to 105 miles in width and has an area of 21,068 sq. miles almost surrounded by the Bay of Fundy, the Atlantic Ocean and the Gulf of St. Lawrence. The mainland is connected with the Province of New Brunswick by the Isthmus of Chignecto. Cape Breton Island forms the northeast portion of the Province. It is separated from the mainland by the narrow Strait of Canso (which is now however traversed by a permanent causeway) and includes the famous saltwater Bras d'Or Lakes. On the Atlantic side the mainland is generally rocky and open to the sweep of Atlantic storms; it is extensively indented and has numerous harbours providing safety for the large fishing fleets that support the extensive fishing industry of the Province. The slopes facing the Bay of Fundy and the Gulf of St. Lawrence are sheltered from the Atlantic by low ridges not exceeding an altitude of 1,500 feet and running through the centre of the Province. In striking contrast to the rocky Atlantic side they present fertile plains and river valleys especially adapted by climate and situation to the growth of apples, pears and other fruits.

Nova Scotia is one of the leading provinces in the production of good quality bituminous coal suitable for the production of coke and excellent for domestic use and for steam-raising purposes. The chief coalfields are in the Sydney and Inverness areas on Cape Breton Island and in Pictou and Cumberland Counties on the mainland. Nova Scotia is also an important producer of salt, gypsum and barite.

New Brunswick.—New Brunswick is nearly rectangular in shape with an area of 27,985 sq. miles. The Bay of Chaleur on the north, the Gulf of St. Lawrence and Northumberland Strait on the east, the Bay of Fundy on the south, and Passamaquoddy Bay on the southwest provide the Province with a very extensive sea coast. It adjoins the United States on the west and the Province of Quebec on the north and northwest.

The surface of New Brunswick is mostly undulating, its highest elevation of 2,690 feet being in the vicinity of Grand Falls on the St. John River. In the northeastern half of the Province extensive areas of Crown lands carry valuable stands of merchantable

timber and numerous rivers provide access to the lumbering areas. The Province is watered to the west and south by the St. John River which in its course of 400 miles runs through country famed for its beauty.

Economically the forest resources are of first importance, followed by the fisheries, although large areas of rich agricultural land are found in the numerous river valleys, especially that of the lower St. John, and in the broad plains along the Bay of Fundy coast. The mineral resources of the Province include moderate amounts of coal, natural gas and petroleum and an extensive orebody with an excellent grade of lead-zinc ore is now under development southwest of Bathurst. In addition in 1954 announcement was made of the discovery of several extensive zinc-lead-copper-pyrite orebodies northwest of Newcastle.

Quebec.—Quebec, the largest province of Canada, lies east and southeast of Hudson Bay; adjoining it on the south are the United States and New Brunswick, with Ontario on the west. It has an area of 594,860 sq. miles, and most of the surface is made up of Precambrian rocks of the Canadian Shield. North of the St. Lawrence is the broken rim of the Canadian Shield, rising sharply to the Height of Land (varying from 1,000 to 3,000 feet) from which it descends gently to sea level at Hudson Bay and Hudson Strait. The Gulf of St. Lawrence and the River St. Lawrence penetrate the entire width of Quebec and divide the Eastern Townships and the Gaspé Peninsula to the south from the larger area of the Province to the north.

With the exception of the treeless zone extending north of latitude 58°, most of the Province supports a valuable tree growth varying from the mixed forests in the southwest to the coniferous forests in the east and north. In addition to extensive timber limits which form the basis of a great pulp and paper industry Quebec is the foremost of the provinces in the development of hydroelectric power and has available waterpower resources at ordinary minimum flow almost equal to those of Ontario and Manitoba combined. Quebec has made exceptionally rapid progress in the development of its mineral resources and ranks next to Ontario in annual value of mineral output. In 1953 the Province produced about 70 p.c. of the world output of asbestos and is a leading Canadian producer of copper, gold and zinc. In the Quebec-Labrador region are huge deposits of hematite from which production commenced in 1954. Also, important discoveries of iron ore have been made on the west side of Ungava Bay. At Allard Lake in eastern Quebec are large deposits of ilmenite, an ore of titanium and iron, output from which is shipped to Sorel for treatment. The fisheries in the St. Lawrence River and Gulf are important and inland waters abound in game fish. The climate and soil of the upper St. Lawrence Valley and of the Eastern Townships are well suited to general farming operations including dairying and the production of vegetables and maple products.

Ontario.—Lying between Quebec on the east and Manitoba on the west, Ontario has an area of 412,582 sq. miles. Though usually regarded as an inland province its southern boundary has a freshwater shore line of 2,362 miles on the Great Lakes and its northern limits have a saltwater shore line of 680 miles on Hudson and James Bays.

The surface of Ontario is characteristic of the Canadian Shield, except in the southern triangle lying between the lower lakes and the Ottawa River where the surface is undulating to rolling, being higher to the west of the Niagara Escarpment, northwest of which the highest elevations are obtained. The highest point in Ontario is 2,120 feet, on the promontory at the northeastern corner of Lake Superior. Northwest from the Height of Land the slope descends very gently to Hudson Bay where a large marginal strip (the Hudson Bay Lowlands) is less than 500 feet above sea level.

Ontario has long been Canada's leading producer of minerals and accounts for practically all the Canadian production of nickel and for about 82 p.c., excluding USSR, of the world output of this metal. It is a leading world source of copper and the platinum metals and mainly as a result of developments in the Steep Rock and Michipicoten areas

it is rapidly gaining prominence as a source of iron ore. Ontario also produces several of the industrial minerals, a fairly recent addition to the list being asbestos from the Matheson area. The Province produces substantial quantities of natural gas and relatively small amounts of crude petroleum.

The Great Lakes waterways system permits economic international transportation of iron ore and coal for Ontario's basic iron and steel industries. This advantage together with an abundance of natural resources has made Ontario the foremost manufacturing province of Canada. Vast forest resources in proximity to hydroelectric power form the basis of a large pulp and paper industry, while the forests of the north are a rich fur preserve.

The lands along the St. Lawrence and the lower lakes possess excellent soil and constitute a highly productive farming district catering to the needs of a large urban population. In the Niagara Peninsula fruit farming has been scientifically developed into a highly specialized industry.

Manitoba.—Manitoba, covering 246,512 sq. miles, is the most central of the provinces. Its southwestern portion together with the southern portions of Saskatchewan and Alberta constitutes the Prairie section of the Western Interior Lowlands Region—world-renowned for the quality of its wheat. Manitoba is a land of wide diversity, combining 400 miles of sea coast along its northeastern boundary bordering Hudson Bay with great areas of mixed forests, large lakes and rivers covering an area of 26,789 sq. miles, a belt of treeless prairie extending to the southeastern corner of the Province and patches of open prairie underlain by very fertile soil of great depth. The average elevation of the Province is between 500 and 1,000 feet. The greatest height—2,600 feet—is Duck Mountain, northwest of Lake Dauphin.

Most of that part of Manitoba lying north and east of Lake Winnipeg is underlain by rocks of the Canadian Shield. Within this area are numerous deposits of base metals and gold and from the mines in this area Manitoba obtains all its metal output. The largest operation is at Flin Flon where copper-zinc deposits are located. These deposits straddle the Manitoba-Saskatchewan boundary and for a number of years most of the output has come from the Saskatchewan portion. Large copper-nickel deposits are being developed at Lynn Lake.

From the southern portion of the Province Manitoba obtains its output of several non-metallic minerals. Crude petroleum was discovered in the Virden district a few years ago and a number of wells are now in production in this general area.

Saskatchewan.—Saskatchewan, 251,700 sq. miles in area, lies between Manitoba and Alberta and extends, as do those Provinces, from the International Boundary on the south to the 60th parallel of latitude on the north. The Canadian Shield extends over the northern third of the Province. This portion is abundantly watered by lakes and rivers and is generally of low relief. It is rich in timber resources and from it comes Saskatchewan's metal output which is practically all obtained from the large copper-zinc deposits straddling the Saskatchewan-Manitoba boundary. The discovery of deposits of uranium ore in the Beaverlodge area north of Lake Athabasca has brought Saskatchewan prominently to the forefront as a potential world source of this ore; production in this area commenced in 1953.

The southern two-thirds of the Province forms part of the Western Interior Lowlands Region and is generally fertile, with soil of great depth. Normally there is sufficient moisture for rapid growth and the abundant sunshine during the long summer season in this northern latitude quickly ripens the crops. This portion of Saskatchewan is rich in non-metallic minerals including fuels and is the source of all of Canada's output of sodium sulphate. During the past few years extensive exploration for crude petroleum and natural gas has been conducted here with increasingly successful results.

Alberta.—This Province covers 255,285 sq. miles and lies between Saskatchewan and British Columbia. The southern part of the Province is dry, treeless prairie, changing to the north into a zone of poplar interspersed with open prairie and giving way to mixed forests. The Canadian Shield extends only into the northeast corner of Alberta, so that excepting the fringe of mountainous country on its western border, practically the whole of the Province is underlain by arable soil of great depth. Alberta has three marked physical features—the plains, the foothills, and the portion of the Rocky Mountains within its boundaries. Overlying these is the marked difference in vegetation of the arid southwest and the more humid parklands of the remainder of the Province which merge with mixed and coniferous forest. Permanent agricultural settlement reaches its farthest northern point in Canada in the Peace River Valley of Alberta. The southern half of the Province, rising towards the west, lies at a general elevation of from 2,000 to 4,000 feet but in the northern half the slope descends until elevations of well under 1,000 feet are reached at Lake Athabasca in the northeast corner.

Alberta has the most extensive coal resources of any of the provinces and following the discovery of the Leduc oil field about 20 miles southwest of Edmonton in 1947 it is rapidly becoming a major world source of crude petroleum. Huge reserves of natural gas have been disclosed, mostly as a result of oil drilling operations, and prospects are bright for further large discoveries of petroleum and natural gas. These resources provide the basis of Alberta's industrial development. Lumbering is important in the more mountainous western parts and in the north and ranching is carried on in the dry sections of the south and west. In some southern prairie areas the quantity and distribution of the natural precipitation make permanent agriculture precarious and a number of large irrigation projects have been developed which take their water supply from rivers rising in the mountains that form the western boundary of the Province. The climate of Alberta is particularly pleasant, warm and dry generally during the summer, and during the winter the cold is moderated in the south by the chinook winds.

British Columbia.—British Columbia, 366,255 sq. miles in area, is the third largest and the most westerly province of Canada. It includes many islands of the Pacific, notably Vancouver Island and the Queen Charlotte Islands, the area of the former being 12,408 sq. miles.

The predominant feature of the Province is the parallel ranges of mountains that cover all except the northeast corner—resulting in a set of parallel linear valleys. Many of these are extremely fertile with climatic conditions well adapted to mixed agriculture or fruit growing. Generally the agricultural areas of these valleys are relatively small and broken. Two large areas in the Peace River Block and the Stuart Lake District have great agricultural possibilities. The shoreline of the Pacific is deeply indented with many inlets that are ideal for harbourage.

The wealth of the forest resources supports the lumbering and pulp and paper industries and places British Columbia first among the provinces in the production of lumber and timber. The Province excels in fishery products chiefly on account of the famous Pacific salmon. The mineral resources are remarkable for their variety and wealth. Production of lead, zinc, silver, gold and to a lesser extent copper has played an important role in the economic life of the Province since its early days and valuable coal deposits on Vancouver Island and at Crowsnest and Fernie in the interior have been worked for many years. The Province is one of the chief sources of tungsten ore in the free world and asbestos has been added recently to the list of minerals produced. Huge supplies of natural gas have been disclosed in the Peace River section of the Province. In waterpower resources, British Columbia ranks second in Canada.

The Yukon and Northwest Territories.—These vast northern territories extend over an area of 1,511,979 sq. miles from the 60th parallel of latitude to the northernmost limits. They comprise about 39 p.c. of the surface of Canada.

The Territories are areas of contrast and extremes in topographical characteristics, flora and fauna, and climate. Surface features vary from the treeless plains of the far north, the rolling hills of the Canadian Shield in the east, and the forested valley of the Mackenzie River, to some of Canada's highest mountain peaks in the west; from small streams and lakes to the longest rivers in Canada—the Mackenzie, over 2,600 miles in length, the Yukon, approximately 2,000 miles long, and Great Slave and Great Bear Lakes, both of which are over 11,000 sq. miles in area.

Since the Klondike gold rush near the close of the nineteenth century the Yukon Territory has been an important producer of placer gold. Rich deposits of lead-zinc-silver ore occur in the Mayo area from which a substantial production of these metals is obtained. Interest in the mineral possibilities of the Yukon has been increasing steadily in recent years.

Mineral production in the Northwest Territories is still relatively small considering the size of the region but the prospects for a substantial increase seem to be bright. Oil from the Norman Wells area, pitchblende products from deposits at Port Radium on the east shore of Great Bear Lake and gold from the Yellowknife area are the chief minerals produced.

The agricultural land of the Territories lies almost entirely in the extension of the central plains of the Prairie Provinces into the Mackenzie Valley and crops are confined to vegetable gardens. In the northern regions the flora and fauna have their own peculiar patterns. There are immense areas of lichens which at first sight appear to be stretches of broken greyish rock. These, along with sedges, grasses, crowberries, ground-willow, etc., provide food for the caribou and muskoxen.

The winters along the Mackenzie River are bitterly cold, averaging 16° to 25° below zero but in Yukon they are surprisingly mild and vary from 2° to 21° below zero.

Hunting of caribou, seals, walrus and whales and fishing and trapping form the principal basis of existence for the native Eskimos, providing food and hides for the manufacture of clothing, sleeping bags, etc. The introduction of reindeer by the Federal Government in the Mackenzie District of the Northwest Territories has provided an important local industry to serve the people's needs.

MAPPING AND CHARTING IN CANADA*

Maps and charts are a necessity in the development of a country. They are required for natural resources development, for defence, administration, educational and recreational purposes, and for extending trade and commerce. In fact they are required in most of the activities of present day life.

In Canada government and public demand for maps and charts has grown at such a rate that Federal Government distribution of these in 1955 was well over the million mark—or over five times that of prewar years and double that of 1947. This has been mainly owing to Canada's rapid industrial expansion, the country's large defence needs, and because, at work or at play, Canadians are a map-conscious people.

This article outlines the work of the Surveys and Mapping Branch of the Department of Mines and Technical Surveys and of the Geological Survey of Canada, together with that of the Forestry Branch of the Department of Northern Affairs and National Resources. It is planned, in future editions of the Year Book, to give more detailed descriptions of the mapping responsibilities of the agencies dealt with here as well as to cover the work of other mapping authorities.

THE DEPARTMENT OF MINES AND TECHNICAL SURVEYS

The formidable task of mapping Canada's vast area of 3,800,000 sq. miles and of charting the thousands of miles of its coast line and its inland waters is being carried out by the Federal Department of Mines and Technical Surveys. On this Department rests

* Prepared by the Department of Mines and Technical Surveys, Ottawa, except as otherwise indicated.

the responsibility of compiling topographical, geological and aeromagnetic maps, aeronautical and hydrographic charts, electoral maps and such specialized maps as those that appear in the *Canada Air Pilot*.

The Department's mapping policy is to provide as soon as possible complete topographical coverage of all of Canada on a scale of approximately 1 inch to 4 miles and coverage of the settled and developed parts on a scale of approximately 1 inch to 1 mile; geologically, to provide maps of all land areas on scales of 1 inch to 4, 8, or 16 miles.

At mid-1955 over 50 p.c. of Canada excluding the Arctic Islands had been covered topographically by published maps or maps in hand on the 4 mile scale, and almost 25 p.c. at the more detailed scale. This mapping is being carried out by the Department's Surveys and Mapping Branch. In its geological mapping the Department, through the Geological Survey of Canada, is giving top priority to reconnaissance work and to the development of more rapid reconnaissance methods. It is doing this to provide within the foreseeable future vital geological data on Canada's vast northland for use by the mineral industry and those concerned with the planning and guidance of Canada's economic development. The Department's Geographical Branch meanwhile is carrying out surveys of the physical geography of northern regions and of the economic and social geography of selected areas in southern Canada.

SURVEY METHODS

The mapping* of Canada presents many challenges to federal mapmakers, the chief being the ever present problems of great distances and of areas that are practically impossible of access. In meeting these challenges the Department has been greatly assisted in recent years by the use of the aeroplane and the helicopter, of air photography and various modern devices such as shoran trilateration—an electronic method of measuring distance—and by the development of modern photogrammetric plotting instruments for the plotting and compilation of maps from air photos.

Air Transport.—The Department uses the aeroplane to carry men and supplies to distant points and in its application of shoran trilateration. The helicopter is being used more and more in areas which, because of muskeg or mountains, are sometimes difficult or impossible to survey or map by ground parties or other methods. It is also used for geological reconnaissance mapping in Canada's northland and in mountainous areas to speed up the pace of mapping.

Since World War II aerial photography has become a necessity in mapping: in fact no mapping is attempted today without air photography. Much of the pioneer work in using and adapting aerial photography to mapping in Canada was done by the Department's Topographical Survey. Today aerial photographs are taken for the Department mostly by contract with commercial companies.

Air Photography.—The use of air photography has made the mapping of the Canadian north on a 1 inch to 4 mile scale practicable. During World War II the north was covered by trimetrogon pictures which consist of one vertical and two lateral oblique photographs taken at the same time. These pictures allowed the preparation of general maps on the scale of 1 inch to 8 miles. Such maps were satisfactory for air navigation and for reconnaissance investigations of the geology and mineral deposits, but were too limited in accuracy for more detailed studies. Consequently all areas that were covered in a preliminary way by trimetrogon photographs are now gradually being covered by vertical photography. Much of the flying is done at about 30,000 feet to give wider coverage; lower flying is required in areas where greater topographic detail is required for special purposes.

Shoran and Other Methods.—Use of shoran trilateration to measure distance has greatly facilitated the fixing of triangulation nets of points—more simply, the setting up of the framework of control for mapping—throughout the country. This control framework is necessary in order to place map sheets in their proper relationship to one another and in their proper place with reference to longitude and latitude. Moreover the elevations of these points must be determined with precision so that the surveyed altitudes of the points have true relations to one another and to the datum of sea level. Before the advent of shoran trilateration the Department of Mines and Technical Surveys erected signalling towers and by a rather slow process of observing angles between stations, built up a triangulation net in which all points of observations were accurately determined. Since World War II the Department has replaced this older method, in the north particularly, by shoran trilateration by which it is possible to measure lines 300 miles in length within an error of 20 feet.

Canada's work in shoran trilateration, which is done by the Department's Geodetic Survey, has become a model for geodetic work in all undeveloped parts of the world. Its use has allowed Canada in a few years to extend a triangulation net for accurate mapping from southern Manitoba to the Arctic and across the Arctic Islands to Labrador, where it is being joined to a net from the St. Lawrence. Because of the remoteness and isolation of most of the areas covered much of this work would have been impossible by the older methods. Shoran has also been applied to the location in relation to the ground stations of the position, at the instant of exposure, of the aeroplane taking air photographs. The establishment of the positions along certain control lines by this means provides the necessary horizontal control for maps and air charts of the scale required throughout large areas of the north.

Another electronic measuring device, the radar altimeter, measures the approximate distance from an aeroplane to the surface of the ground. The idea for this device originated in the Department of Mines and Technical Surveys and was developed by the Department with the co-operation of the National Research Council. Radar altimetry is being used in contouring air charts and is being developed for use in larger scale mapping.

Great progress has been made in using various types of plotting instruments to transfer information from air photos to a map surface and the older methods of plotting topography in the field by the use of the plane table have wholly disappeared. The use of the elaborate present day photogrammetry equipment has effected an appreciable saving both in time and cost in the field, particularly in view of the short field season and the transportation difficulties encountered in many areas in Canada, and has resulted in an increased production of maps.

THE SURVEYS AND MAPPING BRANCH

The Surveys and Mapping Branch of the Department of Mines and Technical Surveys placed 73 parties in the field in 1955: 18 of these came from the *Geodetic Survey of Canada* which provides the framework of control for all mapping carried out in Canada; 25 were from the *Topographical Survey* which surveys Canada's actual physical features and maps them with the aid of aerial photographs; 12 were from the *Legal Surveys and Aeronautical Charts Division* which carries out all land boundary surveys on Dominion Lands and produces all the necessary aeronautical charts to meet civilian and defence needs—and electoral maps as well; 18 were from the *Canadian Hydrographic Service* which charts Canada's coastal and inland waters, measures tidal currents and levels and issues charts and tables for shipping.

Highlighting the 1955 field program were two helicopter projects carried out by the Topographical Survey over areas totalling 60,000 sq. miles in New Quebec-Labrador and along the lower Mackenzie River in the Northwest Territories. In New Quebec-Labrador six topographical engineers mapped four areas totalling 24,000 sq. miles on a scale of approximately 1 inch to 1 mile. The areas comprised the western coastal region of Ungava Bay, the central portion of the peninsula east of Ungava Bay, an inland area in central northern Labrador, and a small area in the Lake Manuan district about 130 miles south of Ungava Bay. In the Northwest Territories six other topographical engineers mapped, on the same scale, a 35,000 sq. mile area straddling the lower Mackenzie River from Fort Good Hope to the Mackenzie delta. The party used two helicopters and one conventional aircraft for transportation.

In the charting of Canada's coastal and inland waters, the Canadian Hydrographic Service is replacing older techniques with newer sonic methods. In 1955 for instance it determined the positions of soundings in offshore areas south of Anticosti Island electronically rather than by direct shore observation. The Service has three vessels on the Pacific Coast and four on the Eastern Coast. During the past several years it has chartered an additional two boats for northern work. It also has several smaller boats on inland waters including the Great Lakes and Great Slave Lake. In all it uses about 16 craft in the task of making soundings for charts.

The increasing interest being shown in Canada's Far North has pointed up the need for the establishment of safe routes of travel through Canadian Arctic waters, and the seeking out and charting of possible harbours for use in connection with the development of newly discovered resources and for the safe sea supply of various stations recently established in the Arctic Islands. The keel for *The Baffin*, a \$4,000,000 ship specially designed for this type of Arctic work, was laid in the spring of 1955 and the ship is expected to be in commission in 1956.

THE GEOLOGICAL SURVEY OF CANADA

The Geological Survey of Canada sends 70 to 90 parties in to the field each year. Since the Survey started operations in 1842 it has provided a general picture of the country's geology and has mapped over 1,000,000 sq. miles of Canada's 3,800,000 sq. mile area on scales adequate to meet the requirements of mineral development.

It maps areas on different scales depending largely upon the interest and the extent of activity in the areas. It does reconnaissance mapping for instance to sort out the more favourable areas for prospecting in a region, which are then mapped on a detailed scale. Areas under development are mapped on detailed scales ranging as a rule from 1 inch to 1 mile, to 1 inch to 1,000 feet. This provides industry with the key to the geology of a particular area and thus guides it in the development of other mineral deposits. Areas being studied in this manner include the rich silver-lead Mayo area in central Yukon, the Beaverlodge uranium area in northern Saskatchewan and the extensive iron ore fields of New Quebec-Labrador.

Aerial reconnaissance mapping of Canada's northern regions now under way will soon place in the hands of the mineral industry geological information on the more favourable prospecting areas. The Survey began this reconnaissance mapping in 1952 with *Operation Keewatin* in the Northwest Territories when five geologists mapped a 57,000 sq. mile area by helicopter in the southern part of the District of Keewatin west of Hudson Bay. Use of the helicopter allowed the Survey to crowd into one field season mapping that would have taken it 20 to 25 years by the more conventional methods—and the work

was done at a much lower cost. *Operation Keewatin* showed that 25 p.c. or approximately 14,000 sq. miles of the area mapped is favourable for prospecting, a high percentage when compared with some of the better known favourable areas in more southerly regions.

In *Operation Baker* in 1954 five geologists, using helicopters, mapped 67,000 sq. miles of territory in the central part of the District of Keewatin just north of the territory covered in *Operation Keewatin*. In 1955 the Survey carried out two similar projects, *Operation Franklin* in the Queen Elizabeth Islands, the largest operation of its kind ever attempted, and *Operation Thelon* in the District of Mackenzie in the Northwest Territories.

In *Operation Franklin* seven departmental geologists, four seasonal geologists and ten student assistants trained in geology mapped 100,000 sq. miles of land on the Queen Elizabeth Islands in the District of Franklin. The entire project was airborne, the two helicopters used for the geological mapping being among the largest in commercial operation. Working from its main base at Resolute Bay the party set up subsidiary bases east of Resolute Bay, moving northward and then westward as the sea ice broke up. It examined the main geological zones of the Islands, investigated local geology for possibilities of mineral occurrences particularly of oil and gas and made detailed studies at scores of points, some within 600 miles of the North Pole. The party found numerous coal seams and several extensive areas that could be explored for oil. In *Operation Thelon* five geologists mapped a 60,000 sq. mile area in the southeast part of the District of Mackenzie in the Northwest Territories and reports on the findings in both operations are being prepared. The Survey has thus gained in a few years a considerable knowledge of the prospects for minerals in areas totalling 184,000 sq. miles north of the 60th parallel of latitude and between Hudson Bay and Great Slave Lake in the Northwest Territories, and of 100,000 sq. miles of territory in the Arctic Islands.

The Geological Survey has also met with considerable success in using helicopters for reconnaissance mapping in the rugged mountain areas of British Columbia where ground methods are impracticable. It also used helicopters to map a timbered area of Cape Breton Island in Nova Scotia in 1954, affording operational experience in the use of these machines in such areas.

The Survey does a certain amount of airborne magnetometer work each year. In this work the aeroplane is equipped with instruments that record total magnetic force of the rocks over which the aircraft is flown, even if the rocks are buried beneath heavy overburden. Areas of high magnetic intensity or 'anomalies' may indicate the presence of mineral deposits. The Geological Survey publishes the information thus secured in the form of aeromagnetic maps and these have proved to be valuable guides in the search for mineral wealth. The iron ore deposits now being mined at Marmora in southeastern Ontario were brought to light as a result of such a survey. They were covered with 100 feet of limestone which had to be removed to permit mining.

Although the Geological Survey placed fewer parties in the field in 1955 the increased use of aircraft resulted in the coverage of an area greatly in excess of that of any previous year and almost completed the geological reconnaissance of the Canadian Shield south of latitude 66°.

In its survey of the physical geography of northern regions the Geographical Branch makes extensive use of aerial photography to study, in the office, key areas so as to interpret the character of the terrain. This work, which is supplemented with ground studies to prove the correctness of the deductions, has proved particularly useful for selecting base and station locations in the construction of northern defence lines.

At the request of the Civil Defence Division of the Department of National Health and Welfare the Branch is making detailed studies of the industrial, commercial and residential areas of the major Canadian cities in relation to civil defence needs. Several of these studies have been completed.

Much has been accomplished to date in mapping and charting in Canada but the task ahead of the Department of Mines and Technical Surveys of providing the various maps and charts required in the development of Canada's wealth of natural resources is great. This is particularly true of the Canadian north which is receiving increasing attention in recent years. If the greater part of this task is to be accomplished in this generation continued emphasis must be placed on the use of the newer methods of mapping. Need for its accomplishment in the not too distant future is seen in the rapid pace of industrial development in Canada today.

THE FORESTRY BRANCH, DEPARTMENT OF NORTHERN AFFAIRS AND NATIONAL RESOURCES*

The application of aerial photography to mapping of forest cover in Canada has been widely developed in recent years by the Forestry Branch of the Federal Department of Northern Affairs and National Resources. Under the terms of the Canada Forestry Act 1949 the Federal Government offers financial support to the provinces to assist them in completing an inventory of their forest resources by aerial photographic methods. It is hoped thereby to prepare a national forest inventory. Data from air photographs are correlated with field work to develop new techniques of timber estimating. Research is being continued in methods for measuring tree images and tree shadows to determine heights, crown widths, canopy density and other data from photographs taken in different seasons of the year under various conditions. The use of large scale photography of sample areas is also being investigated and studies are being made in the identification of species and sub-types. Construction of suitable photogrammetric and other scientific apparatus includes those required by the forestry tri-camera method of air photography, which has been developed to provide maximum forestry information at minimum cost, and the shadow-height calculator, constructed to facilitate the determination of tree heights from shadows in air photographs.

PART II.—LAND RESOURCES AND PUBLIC LANDS

Section 1.—Land Resources

Information at present available regarding Canada's vast land resources is shown in Table 1, where the land area is classified as occupied agricultural, forested and 'other' land, the latter including urban land, road allowances, grass and brush land and all waste land such as open muskegs, swamp, or rock. Soil surveys now under way by the Department of Agriculture will make it possible in the future to estimate the amount of arable land Canada possesses and as provincial inventories are completed more information will be available regarding land now non-forested but not productive in an agricultural sense. The Forestry Branch of the Department of Northern Affairs and National Resources estimates that about 44 p.c. of the land area of Canada is forested and, according to the Census of 1951, less than 8 p.c. is classed as occupied farm land. A great part of the 1,738,986 sq. miles of 'other' land is located in the Yukon and Northwest Territories which together have a land area of 1,458,784 sq. miles. The occupied farm land in these Territories is practically nil and the forested area is estimated at 275,800 sq. miles.

* Contributed by the Forest Inventories Section, Forestry Branch, Department of Northern Affairs and National Resources.

1.—Land Area Classified as Occupied Agricultural or Forested by Province

NOTE.—Figures for occupied agricultural land were obtained from the 1951 Census; areas of forested land were compiled by Forestry Branch, Department of Northern Affairs and National Resources from estimates supplied by the Forest Service in each province and were released Feb. 22, 1956.

¹ Less than one square mile.

² Included in *Forested Land*; duplication eliminated in the item *Net Productive Land*.

³ Areas incapable of producing crops of merchantable timber because of adverse climatic, soil or moisture conditions.

⁴ Includes only occupied agricultural land (less forest woodland), plus productive forested land.

⁵ Comprises all urban land, road allowances, grass and brush land and all waste land such as open muskegs, swamps and rock.

⁶ *Net Productive Land*.

Section 2.—Public Lands

In Table 2, classifying the area of Canada by tenure, items 2, 3, 4 and 5 are obtained from Federal Government sources and items 1, 6, 7 and 8 from Provincial Government sources.

2.—Area classified by Tenure (circa) 1955

¹ Includes Gatineau Park (70 sq. miles) and Quebec Battlefields Park (0.36 sq. mile) which are under Federal jurisdiction but are not technically National Parks. ² Less than one square mile. ³ Includes 952,849 sq. miles set aside by Order in Council as native game preserves in which only Indians and Eskimos may hunt, as game sanctuaries in which hunting and trapping is otherwise forbidden, and as reserves for reindeer grazing, but which are not regarded as National Parks. ⁴ Includes Wood Buffalo Park (13,675 sq. miles) which, although reserved by the Federal Government, is not administered as a National Park. ⁵ That part of Wood Buffalo Park in N.W.T. ⁶ A forest experiment area of 25 sq. miles is included in National Parks figure. ⁷ Provincial Park development is carried out in two provincial forest reserves of Manitoba having a total area of 1,668 sq. miles; duplication is omitted from totals.

Subsection 1.—Federal Public Lands

Public lands under the administration of the Federal Government comprise lands in the Northwest Territories including the Arctic Archipelago and the islands in Hudson Strait, Hudson Bay and James Bay, lands in Yukon Territory, Ordnance and Admiralty Lands, National Parks and National Historic Sites, Forest Experiment Stations, Experimental Farms, Indian reserves and in general all public lands held by the several Departments of the Federal Government for various purposes connected with federal administration. The Dominion Lands Act (R.S.C. 1927, c. 113) and the Ordnance and Admiralty Lands Act (R.S.C. 1927, c. 58) were repealed in 1950, and the Territorial Lands Act (R.S.C. 1952, c. 263) and the Public Lands Grants Act (R.S.C. 1952, c. 224) were enacted to replace them and became effective June 1, 1950.

The largest areas under federal administration are the Northwest Territories and Yukon Territory amounting to 1,511,979 sq. miles or about 40 p.c. of the surface of Canada. This part of the national domain, which, with the exception of the islands in Hudson Bay and James Bay, is all north of the 60th parallel of latitude, is under the administration of the Northern Administration and Lands Branch of the Department of Northern Affairs and National Resources.

Subsection 2.—Provincial Public Lands

Public lands of Nova Scotia, New Brunswick, Quebec, Ontario and British Columbia (except the Railway Belt and Peace River Block) have been administered since Confederation by the Provincial Governments. In 1930 the Federal Government transferred the unalienated portions of the natural resources of Manitoba, Saskatchewan, Alberta and of sections of British Columbia to their respective governments and all unalienated lands in the Province of Newfoundland, except those administered by the Federal Government, became provincial public lands under the Terms of Union on Mar. 31, 1949.

All land in the Province of Prince Edward Island has been alienated except 126 sq. miles under federal administration.

Information regarding provincial public lands may be obtained from the respective provinces. (See the Directory of Sources of Official Information, Chapter XXIX, under "Lands".)

Certain areas in most of the provinces have been set aside for parks and reserves; these are dealt with in Subsection 3.

Subsection 3.—National and Provincial Parks

The future of Canada in the field of outdoor recreation is being wisely provided for by the establishment of National and Provincial Parks. Many of these Parks are easily accessible by highway, rail or air and offer every type of accommodation from camping facilities to cosy cabins and palatial hotels. A wide variety of summer and winter recreational attractions are available in mountain, lakeland, woodland and seaside areas of exceptional scenic beauty.

The areas of the Parks are given in Table 2 on p. 24; location, year of establishment, area, and main characteristics of each National Park are given in Table 3, followed by a brief description of the Provincial Parks.

National Parks.—From 1885, when the first National Park was established around the mineral hot springs at Banff, Alta., until 1954, 29 areas covering more than 29,000 sq. miles have been set aside as National Parks.

These Parks are maintained by the Federal Government for the protection of their flora, fauna and natural phenomena, for the preservation of their scenic beauty and interest and, in some, the marking of their historical significance in the building of the nation. They are supervised by the National Parks Branch, Department of Northern Affairs and National Resources and are developed and maintained in such a manner as to provide perpetual inspiration, education and healthful recreation for present and future generations.

The National Parks are Canada's greatest single tourist attraction. Accommodation in privately owned hotels, bungalow cabins, chalets, lodges and cottages is available and modern cabins have been built in several of the Parks by the National Parks Administration to afford low rental accommodation to Park visitors. Recreational facilities include heated outdoor swimming pools with dressing-room buildings; equipped camp grounds, some with trailer-park facilities; golf courses in superb scenic settings; tennis courts; bowling greens; well equipped children's playgrounds; athletic fields; horseshoe pitches; outdoor checker-boards; and, in some of the Parks, amphitheatres where plays, concerts and film shows are held in the open. For winter sports there are downhill and slalom ski courses, ski jumps, ski tows and a chairlift.

A Park warden service protects the forests and wildlife and maintains constant vigilance for the safety and comfort of visitors. Stocking and transfer of game fish are carried out extensively and successfully in order to improve angling opportunities in Park waters; fish hatcheries are operated in three of the mountain National Parks. The Scientific Management of Game Fish in Canada's National Parks is the subject of a special article on pp. 35-39 of this volume. (A special article on Game Fish in Canada's National Parks is given in the 1952-53 Year Book, pp. 34-36.) Two of the National Parks are largely big-game preserves where herds of buffalo and other animals find sanctuary.

In addition to the scenic, recreational and wild animal parks Canada has twelve national historic parks. The National Parks and Historic Sites Service of the Department of Northern Affairs and National Resources is also responsible for the marking, preservation and restoration of places of great historic interest in Canada. More than 500 such sites have been marked on the recommendation of the Historic Sites and Monuments Board of Canada.

3.—Location, Year Established, Area and Characteristics of National Parks

Park	Location	Year Estab- lished	Area	Characteristics
			sq. miles	
Scenic and Recreational Parks				
Banff.....	Western Alberta, on east slope of Rockies.	1885	2,564.0	Magnificent scenic recreational area; noted resorts, Banff and Lake Louise. Mineral hot springs; summer and winter sports. Accessible by rail and highway. Hotel and bungalow cabin accommodation. Equipped camp grounds.
Yoho.....	Eastern British Columbia, on west slope of Rockies.	1886	507.0	Lofty peaks, magnificent waterfalls, colour- ful lakes. Yoho and Kicking Horse Valleys. Accessible by rail and highway. Hotel and bungalow cabin accommo- dation. Equipped camp grounds.
Glacier.....	Southeastern British Col- umbia, on summit of the Selkirk Range.	1886	521.0	Superb alpine region, towering peaks, glaciers and forests. Accessible by rail only. Climbing, skiing, camping.
Waterton Lakes.....	Southern Alberta, adjoin- ing Glacier Park in Mon- tana, U.S.A.	1895	204.0	Canadian section, Waterton-Glacier Inter- national Peace Park. Mountain play- ground with spectacular peaks and beau- tiful lakes. Accessible by highway. Hotel and bungalow cabin accommo- dation. Equipped camp grounds.
Jasper.....	Western Alberta, on east slope of Rockies.	1907	4,200.0	Mountain playground and noted wildlife sanctuary. Majestic peaks, ice fields, beautiful lakes and famous resort, Jasper. Mineral hot springs, summer and winter sports. Accessible by rail and highway. Hotel and bungalow cabin accommo- dation. Equipped camp grounds.

3.—Location, Year Established, Area and Characteristics of National Parks—continued

Park	Location	Year Estab- lished	Area sq. miles	Characteristics
Scenic and Recreational Parks —concluded				
Mount Revelstoke.....	Southeastern British Columbia, on west slope of Selkirks.	1914	100.0	Rolling mountain-top plateau. Colourful alpine meadows. Accessible by rail and highway. Summer accommodation in Park; all-year accommodation in town of Revelstoke. Championship ski runs and ski jump. Equipped camp grounds.
St. Lawrence Islands...	In St. Lawrence River between Morrisburg and Kingston, Ont.	1914	189.4 (acres)	Mainland area and 13 islands among Thousand Islands. Recreational and camping area. Accessible by highway; by boat from nearby mainland points.
Point Pelee.....	Southern Ontario, on Lake Erie.	1918	6.0	Recreational area. Remarkable beaches, southern flora. Resting place for migratory birds. Accessible by highway. Hotel and bungalow cabin accommodation. Equipped camp grounds.
Kootenay.....	Southeastern British Columbia, on west slope of Rockies.	1920	543.0	Encloses Vermilion-Sinclair section of Banff - Windermere Highway. Broad valleys, deep canyons, mineral hot springs. Hotel and bungalow cabin accommodation. Equipped camp grounds.
Prince Albert.....	Central Saskatchewan, north of Prince Albert.	1927	1,496.0	Forested region dotted with lakes and interlaced with streams. Summer playground and recreational area. Accessible by highway. Hotel and bungalow cabin accommodation. Equipped camp grounds.
Riding Mountain.....	Southwestern Manitoba, west of Lake Winnipeg.	1929	1,148.0	Playground and wildlife sanctuary on summit of escarpment. Fine lakes. Accessible by highway. Hotel and bungalow cabin accommodation. Equipped camp grounds.
Georgian Bay Islands..	In Georgian Bay, north of Midland, Ont.	1929	5.4	Recreational and camping area. Unique pillars on Flowerpot Island. Accessible by boat from nearby mainland points. Equipped camp grounds and annual youth camps on Beausoleil Island.
Cape Breton Highlands.	Northern part of Cape Breton Island, N.S.	1936	390.0	Rugged Atlantic coast line with mountain background. Fine seascapes. Recreational opportunities. Hotel and bungalow cabin accommodation. Equipped camp grounds.
Prince Edward Island..	North shore of Prince Edward Island.	1937	2.0	Strip 25 miles long on shores of the Gulf of St. Lawrence. Recreational area, fine bathing beaches. Accessible by highway. Hotel and bungalow cabin accommodation. Equipped camp grounds.
Fundy.....	On Bay of Fundy between Moncton and Saint John in New Brunswick.	1948	79.5	Delightful recreational area. Forested region, wildlife sanctuary, rugged terrain. Bungalow cabin accommodation. Equipped camp grounds.
Wild Animal Parks				
Elk Island.....	Central Alberta, near Edmonton.	1913	75.0	Fenced preserve containing large herd of buffalo; also deer, elk and moose. Popular recreational area. Accessible by highway. Bungalow cabin accommodation and equipped camp grounds.
Wood Buffalo ¹	Partly in Alberta and partly in Northwest Territories, between Athabasca and Slave Rivers.	1922	17,300.0	Immense region of forests and open plains. Home of largest remaining herd of bison on the Continent. Other wildlife abundant.

¹ Administered by the Northern Administration and Lands Branch, Department of Northern Affairs and National Resources.

3.—Location, Year Established, Area and Characteristics of National Parks—concluded

Park	Location	Year Estab- lished	Area	Characteristics
			sq. miles	
Historic Parks				
Fort Anne.....	Nova Scotia, at Annapolis Royal.	1917	acres 31.0	Site of early Acadian settlement. Museum and well preserved earthworks.
Fort Beauséjour.....	New Brunswick, near Sackville.	1926	81.3	Site of French fort erected in middle of 18th century. Museum.
Fortress of Louisbourg.	Cape Breton Island, N.S., 25 miles from Sydney.	1941	239.5	Ruins of walled city erected by the French, 1720-40. Interesting excavations. Museum.
Port Royal.....	Port Royal, N.S., 8 miles from Annapolis Royal.	1941	20.5	Restoration of "Habitation" or first fort built in 1605 by Champlain, DeMonts and Poutrincourt.
Fort Chambly.....	Chambly, Que.....	1941	2.5	French fort on Richelieu River, first built in 1665. Museum.
Fort Lennox.....	Ile-aux-Noix, Que., near St. Johns.	1941	210.0	Site of early French fort built in 1759.
Fort Wellington.....	Prescott, Ont.....	1941	8.5	Defence post built 1812-13. Museum.
Fort Malden.....	Amherstburg, Ont.....	1941	5.0	Site of defence post built 1797-99. Museums.
Fort Prince of Wales....	Northern Manitoba, near Churchill.	1941	50.0	Ruins of fort built 1733-71 to secure control of Hudson Bay for England.
Lower Fort Garry.....	Manitoba, 20 miles north of Winnipeg.	1951	12.8	Stone-walled fort built by the Hudson's Bay Company between 1831 and 1839.
Fort Battleford.....	Saskatchewan, 4 miles south of North Battleford.	1951	36.7	North West Mounted Police post built in 1876.
Woodside.....	Kitchener, Ont.....	1954	11.0	Boyhood home of the Rt. Hon. William Lyon MacKenzie King, former Prime Minister of Canada.

Provincial Parks.—In addition to the National Parks described above, most of the provinces have established Provincial Parks. These Parks, in the same way as the National Parks, are areas of great scenic or other interest maintained for the benefit of the public. The Provincial Parks are administered by the provincial governments concerned; most have not yet reached the degree of development that marks the National Parks.

A detailed list of the Provincial Parks, showing location, year established, area and a short description of each is given in the 1954 Canada Year Book, pp. 26-30. The more important Parks in each province are mentioned briefly in the following outline.

Newfoundland.—Provincial park area in Newfoundland was increased recently from 42 sq. miles to 48 sq. miles. In addition to the 42 sq. miles on the west coast of the Province, which was set aside as Serpentine Park and is still undeveloped, 6 sq. miles on the Upper Humber River will be developed in the near future as a Provincial Park.

Quebec.—The Province of Quebec has established five Provincial Parks and four fish and game reserves. Four of the Park areas are quite extensive in size. La Vérendrye Park, 140 miles northwest of Montreal, covers an area of 4,747 sq. miles; Laurentides Park, 25 miles north of Quebec City is 3,613 sq. miles in area; Mont Tremblant, 80 miles north of Montreal, 1,223 sq. miles; and Gaspesian Park, Gaspe Peninsula, 514 sq. miles.

Mount Orford Park, situated 15 miles west of Sherbrooke, is 16 sq. miles in extent. The fish and game reserves together cover an area of more than 10,000 sq. miles—the Chibougamau Reserve, 3,400 sq. miles and the Mistassini Reserve, 5,200 sq. miles, both northwest of Lake St. John; the Kipawa Reserve, 1,000 sq. miles, in the Témiscamingue district, and the Shickshock Reserve, adjoining the Gaspeian Park, 314 sq. miles. These Parks and reserves are wilderness areas of great scenic interest, for the most part mountainous country threaded with many rivers, lakes and streams and abounding in wildlife. In all of them, except Mount Orford, excellent fishing may be found and the Parks are organized to accommodate sportsmen and tourists in camps, cottages and lodges. Mont Tremblant is a famous resort area, in both summer and winter, and is easily reached by highway the year round from Montreal. The Department of Game and Fisheries administers the Parks and reserves as well as four salmon streams which are open to anglers.

Ontario.—There are six Provincial Parks in Ontario administered by the Department of Lands and Forests, all of which are Crown game preserves. Three of these Parks—Algonquin, 105 miles west of Ottawa (2,750 sq. miles), Rondeau, 70 miles east of Windsor (8 sq. miles), and Ipperwash, 50 miles north of Chatham (109 acres)—are easily reached by car and contain facilities for camping, picnicking, swimming, dancing, fishing, hiking and boating. Boys', girls' and adults' commercial camps are established in Algonquin Park. Quetico Park, in the Rainy River district of northwestern Ontario (1,720 sq. miles), and Sibley Park, on the north shore of Lake Superior (63 sq. miles), are accessible by car but are not developed. Superior Park, about 70 miles north of Sault Ste. Marie (540 sq. miles), may be reached by boat or rail and is undeveloped.

Manitoba.—Three areas in the Province may be considered as Provincial Parks, although they are not set up as such. Whiteshell Forest Reserve (1,088 sq. miles) and Cormorant Forest Reserve (580 sq. miles) are used as recreational areas. Another area known as the Northern Recreational Area (936 sq. miles) has not as yet been designated by Order in Council as either a forest reserve or a provincial park, but it too is used as a recreational area and has been included in the total of 2,605 sq. miles designated as provincial park area in Manitoba. Recently a recreational area called Lynch Point, which covers one square mile, has also been added to the total.

Saskatchewan.—Saskatchewan has ten Provincial Parks having a total area exceeding 1,000,000 acres. Cypress Hills, Duck Mountain, Greenwater Lake, Moose Mountain, Little Manitou and Valley Centre are operated as summer resorts with chalet, lodge, cabin and trailer accommodation, and camping and picnic facilities. Recreational activities include fishing, boating, swimming, golf, tennis, dancing, baseball, hiking, horseback riding, etc., and the Parks are all well fitted with playground and beach equipment for children. In Cypress Hills Park, elk, antelope, deer and beaver are plentiful and brook and other trout abound in the streams and lakes. Heavy stands of tall, straight lodgepole pine provide forest cover in this area. In Duck Mountain, Moose Mountain and Greenwater Lake Parks, moose, elk, deer, bear and beaver are common as well as several varieties of grouse. Heavy stands of spruce, poplar and white birch provide excellent cover for wildlife and pickerel, pike and perch are prevalent in the lakes.

Alberta.—In Alberta 28 Provincial Parks have been established by proclamation or Order in Council but only 20 of them are being developed at the present time. Cypress Hills Park, an area of over 77 sq. miles situated in the southern part of the Province near the Saskatchewan border, is the largest of these Parks. The others include Aspen Beach, Beauvais Lake, Crimson Lake, Dillberry Lake, Pembina River, Gooseberry Lake, Kinbrook Island, Ma-Me-O Beach, Park Lake, Red Lodge, Rochon Sands, Saskatoon Island, Sylvan Lake, Taber, Little Bow, Woolford, Writing-on-Stone, Garner Lake and Vermilion. Picnic shelters, playground equipment and camp stoves are provided in these Parks which are maintained primarily for the recreation and enjoyment of residents of the Province.

British Columbia.—There are 69 Provincial Parks in British Columbia covering an area of about 12,496 sq. miles. These Parks are classified A, B, C and Special. Class A Parks are those considered most highly for immediate recreational development and are strongly protected. Class B Parks are areas slated for development, valuable wilderness areas or places set aside for a specific reason. Class C Parks are intended primarily for the use of local residents and are generally managed by a Board. Special Parks, of which only one remains, were created in the past by Special Acts of the Legislature. The Parks are in all stages of development and dedicated to a variety of recreational uses. There are immense wilderness areas such as Tweedsmuir and Wells Gray Parks and outstanding scenic and mountain places which include Garibaldi, Mount Robson and E. C. Manning Parks. Thousands of city dwellers throng to the ski slopes of Mount Seymour or picnic at Cultus Lake Park. The formal gardens of Peace Arch are a monument to the goodwill between two nations. Vancouver Island has a chain of small forest parks that have achieved a tremendous popularity with tourists—the best known are Little Qualicum Falls and Miracle Beach. In addition, 68 areas are included in a roadside camp-site system, many of them located in the Provincial Parks.

THE NATIONAL CAPITAL PLAN*

Ottawa, the city selected by Queen Victoria in 1857 to be the permanent seat of the legislature of the United Provinces of Upper and Lower Canada, was designated the National Capital of the Dominion upon Confederation in 1867. The community grew out of the military and construction camp which served as headquarters for the building of the Rideau Canal—a military project carried out between 1826 and 1832 which utilized the Rideau and Cataraqui Rivers to link Kingston on Lake Ontario with the Ottawa River to provide a safe interior military waterway between Lake Ontario and Montreal, by-passing the vulnerable international section of the St. Lawrence River. Originally known as Bytown, after Col. John By, R.E., builder of the Canal, the settlement prospered with the development of the lumber trade. The Act of Incorporation, changing Bytown to the City of Ottawa, was proclaimed on Jan. 1, 1855.

The city remained a self-governing municipality in the Province of Ontario after it became the National Capital and no provision was made to equip or plan it in keeping with its new status and functions. When the need for beautification and improvement became apparent, Parliament established the Ottawa Improvement Commission in 1899, (renamed the Federal District Commission in 1927), an honorary organization empowered to co-operate with the city in the development of a system of federal parks and driveways. A parks and parkway plan was prepared in 1903 by the Canadian landscape architect Frederick Todd, and his recommendations guided the Commission over the past half-century in the development of some 22 miles of scenic driveways and 900 acres of parks throughout the urban area.

There was still no over-all plan to guide the Capital's growth however and much of the natural beauty of the city's site was destroyed by industrial, railway and commercial development. A Federal Planning Commission was established by Parliament in 1913 to prepare a comprehensive plan but World War I intervened and the report was never implemented. A plan prepared in 1922 by an Ottawa city planner, the late Noulan Cauchon, was not officially adopted. In 1937 the Government retained the services of the eminent French city planner, Jacques Gréber of Paris to replan the city centre and the grounds of the government buildings. The first project, the siting of the National War Memorial in Confederation Square, was just completed when World War II broke out. For the second time the planning of the Capital was prevented by war.

THE MASTER PLAN

In 1945 Jacques Gréber was invited to return to act as consultant-in-chief on the preparation of a long range Master Plan for Ottawa and Hull as the urban centre of a National Capital District of 900 sq. miles, the boundaries of which had been defined by

* Prepared by the Federal District Commission, Ottawa.

Parliament in 1944. One-third of the District lies in the Province of Ontario and the remainder in Quebec. The co-operation of the cities of Ottawa and Hull, 28 other autonomous municipalities and the two provincial governments is essential to the successful implementation of the Plan, as there is no federal planning or administrative control over the Capital or its District.

In 1946 the Federal District Commission was appointed the federal agency to implement the Plan, amendments to the FDC Act of 1927 providing the necessary powers. The Commission was made responsible for co-ordinating federal construction and development within the National Capital District, and the location, siting and exterior design of federal buildings or other developments on Crown property within the District became subject to Commission approval. The Commission also became the recognized federal agency for negotiating and co-operating financially with the provincial and municipal authorities in the preparation and implementation of the Master Plan. Its membership, hitherto composed of Ottawa and Hull residents, was increased from ten to twenty to permit the appointment of a commissioner resident in each province of Canada so as to bring the experience and points of view of all parts of the country to bear upon the planning problems and proposals. The chairman and members serve without remuneration.

A technical planning group, the National Capital Planning Service (now a branch of the FDC), was established by Jacques Gréber, and made responsible to a National Capital Planning Committee established in 1946 by the FDC to act as the Commission's permanent honorary advisory body on the preparation and implementation of the Plan. The final report* was completed and presented to Parliament in 1949.

The Master Plan is designed to guide the development of the Capital's urban area over the next half-century and to protect the beauty of the surrounding National Capital District. Within its framework it is capable of adjustment to meet new requirements and changing conditions. The largest single project, and the key to the Plan, is the removal of the network of railway lines and their attendant industrial developments from the central area to the outskirts of Ottawa and Hull and, as part of this scheme, the conversion of the abandoned rights-of-way from rail to roadway use. Railway, highway and arterial roadway proposals are therefore treated in detail, as are proposals for governmental development of parks, parkways, sites for departmental buildings and national institutions, etc. The Plan predicts and provides for an ultimate population of about one-half million within a five mile radius of Parliament Hill and recommends that development, on a regional basis, follow the nucleus system of neighbourhoods and communities. It encourages the latter by the planned decentralization of government departmental buildings and institutions throughout the urban area. For economical urban development and other reasons the Plan would limit the population to the above figure (contained in an urban area of 44,000 acres) and to achieve this recommends surrounding the urban area with a controlled rural fringe, or green belt. The belt, three to five miles wide, is designed to mark the limit of extension of urban municipal services (and therefore dense housing development within it is not recommended); to prevent dangerous and uneconomical ribbon housing development along roads radiating out from the urban area; and to preserve the market garden areas at the urban fringe which supply the city market. Excess population would reside in towns and villages beyond the green belt but within easy commuting distance of the Capital.

The Ottawa-Hull area is treated as one physical, social and economic whole. Comprehensive zoning—a municipal responsibility—is strongly recommended to control industrial, commercial and residential development in the best interests of each; to preserve the amenities of the area; and to protect the large and growing national investment in public buildings, national institutions, parks and parkways.

* Plan for the National Capital of Canada, with Atlas. J. Gréber. Queen's Printer, Ottawa, 1950.

Developments under the Master Plan, apart from private construction, fall into four categories:—

- (1) Federal District Commission responsibilities, such as the re-location of the railways, development of the park and parkway system and some bridges;
- (2) Federal building projects, for whose construction the Department of Public Works, Crown companies or certain departments of government are responsible;
- (3) Federal-provincial-municipal projects, mainly roads and bridges and municipal services, in which the Federal District Commission is the federal planning and financial agent; and
- (4) Purely municipal works in planning and development in which the Commission and its planning staff are available for technical assistance.

PROGRESS OF THE PLAN

Railway Re-location.—This is now about two years ahead of schedule, although it is expected to take another 25 years to complete. One of the first steps taken by the FDC was the acquisition of about 3,000 acres of land at the south and east fringes of Ottawa for future rail and industrial use. A rail line was built along the Walkley Road area to link existing lines at the southern outskirts and in 1953 CNR Montreal-Winnipeg manifest freights began to use the bypass instead of crossing the centre of the Capital. Yard facilities were completed in 1955 and the CNR transferred its freight marshalling and repair and maintenance operations from the downtown Bank Street yards on the CNR crosstown tracks to the new Walkley yards. Plans were made for utilization of the right-of-way thus freed for a crosstown limited-access roadway running 19 miles across the Capital and its rural fringes from east to west, to link with Highway 17 at each end. The "Queensway", as it is known, is a federal-provincial-municipal project, and is expected to be completed by 1960.

It is planned to establish a terminal company to operate all rail facilities within the National Capital District on behalf of the CNR, CPR, and New York Central Railway. This will remove the need for duplicate rail lines and yards within the district and greatly expedite the railway re-location project.

Parks and Parkways.—A vigorous policy of land acquisition begun by the FDC in its early years before extensive suburban development increased property values to the point where it would have been almost financially impossible to carry out the program, resulted in practically all the necessary land being obtained for extensive additions to the Commission's park and parkway system. The approximately 40 miles of future parkways planned will do much to restore the beauty of the Ottawa River and Rideau River waterfronts, and at the same time add about 4,000 acres of open space to the Capital's urban area.

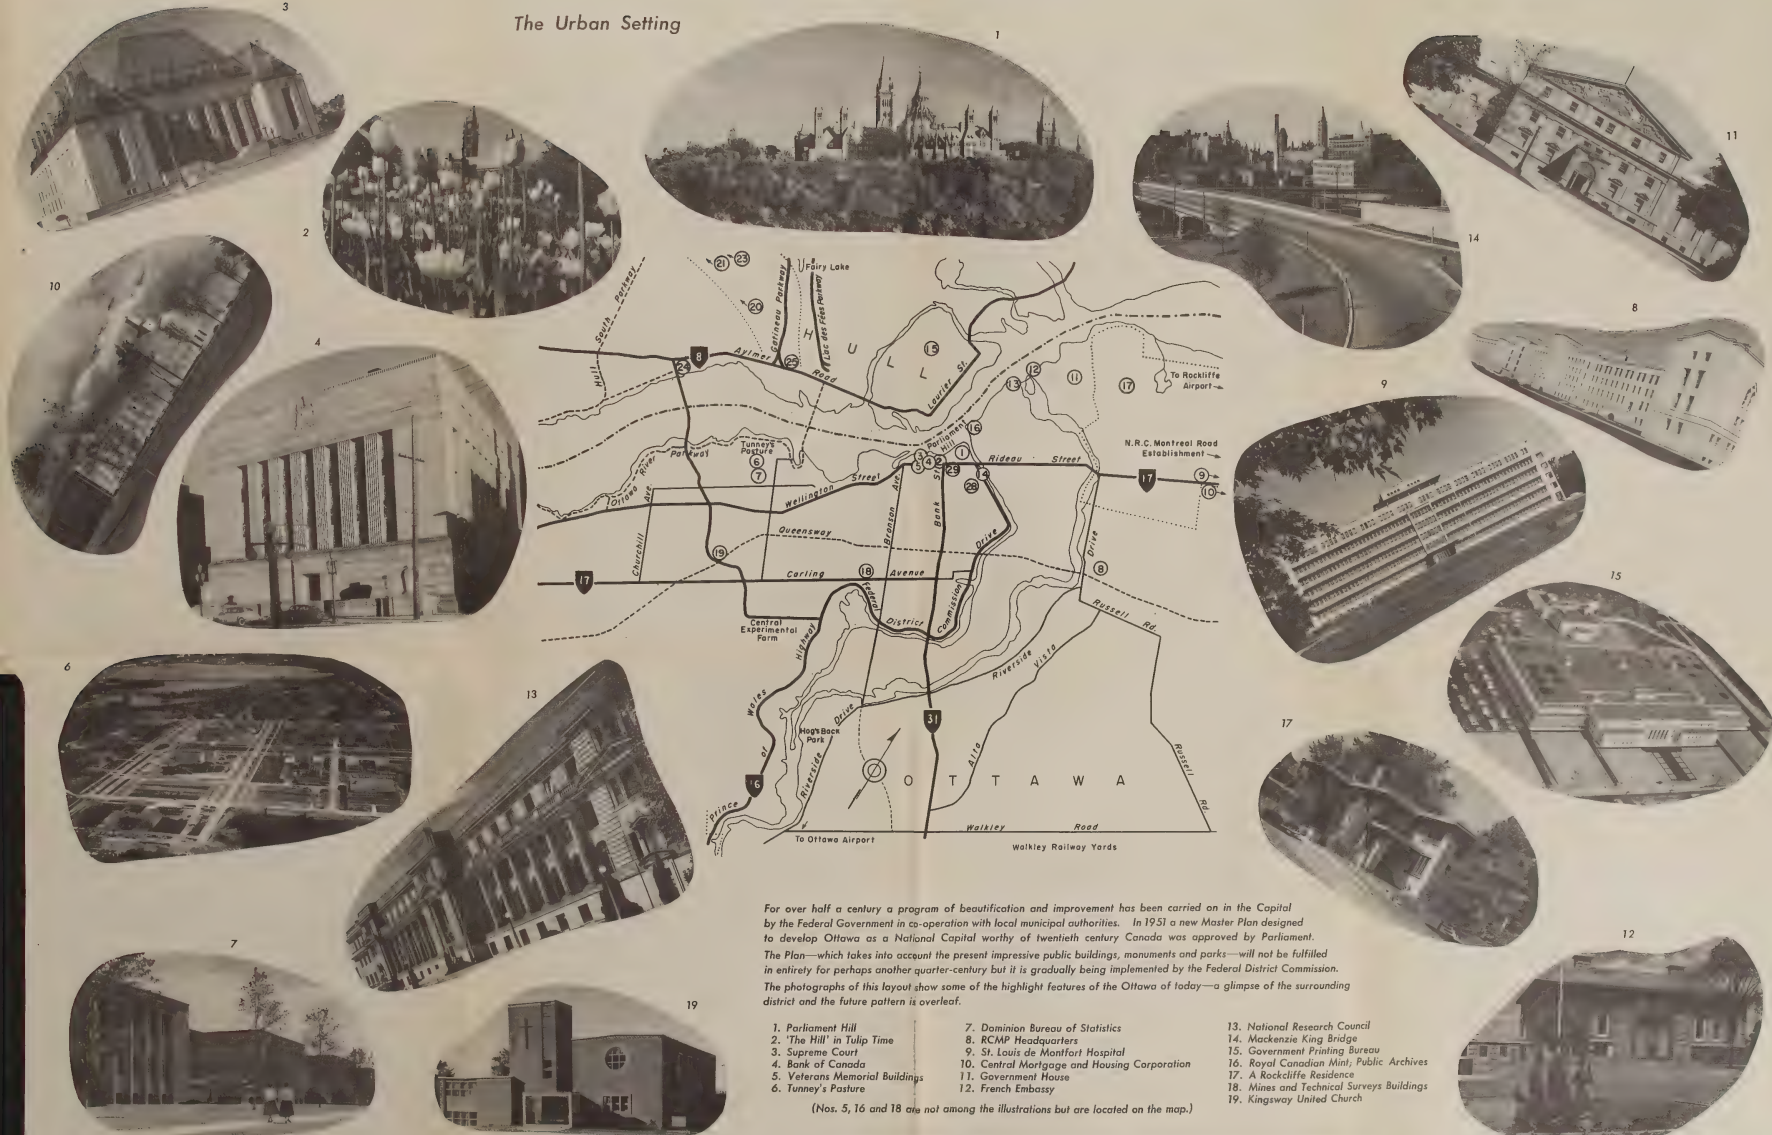

A start has been made on two new parkways in Hull—the local Fairy Lake Parkway in the western section of Hull; and Gatineau Parkway, the first two miles of which have been constructed northwest from the Aylmer Road at Val Tetreau on the Ottawa River-front, eventually to be extended into a 45 mile scenic parkway through Gatineau Park.

Some waterfront park improvements have been made in Hull but the Commission's largest single project of this nature has been the development of the 170 acre Hog's Back Park on the Rideau River and Canal in the southern section of Ottawa.

Gatineau Park.—An integral part of the National Capital Plan is Gatineau Park, situated in the beautiful hill and lake country of the Laurentians north and west of Hull. The FDC began acquiring land for the Park in 1937, and by 1955 had purchased 50,000 acres of the planned 75,000 acre area. With its bathing beaches, hiking trails, camping and trailer sites, youth camps and large and small scale picnic facilities, fishing and boating and excellent winter skiing, the Park is becoming increasingly popular as the summer and winter playground of the Capital area. In the Kingsmere section of the Park is located the 600 acre Mackenzie King Estate, bequeathed to the nation by the late Prime Minister and noted for its picturesque artificial ruins. The Commission plans extensive development of the Park in a way that will preserve the natural beauties of the area.

CANADA'S CAPITAL AND THE NATIONAL CAPITAL PLAN

The Urban Setting

For over half a century a program of beautification and improvement has been carried on in the Capital by the Federal Government in co-operation with local municipal authorities. In 1951 a new Master Plan designed to develop Ottawa as a National Capital worthy of twentieth century Canada was approved by Parliament. The Plan—which takes into account the present impressive public buildings, monuments and parks—will not be fulfilled in entirety for perhaps another quarter-century but it is gradually being implemented by the Federal District Commission. The photographs of this layout show some of the highlight features of the Ottawa of today—a glimpse of the surrounding district and the future pattern is overlaid.

The Sylvan Setting

Ottawa, Hull and neighbouring communities have a magnificent natural setting of woods, rivers and lakes, with the Laurentian highlands overlooking the area to north and northwest. To enhance this natural beauty and provide reader access to famed Gatineau Park, the National Capital Plan calls for many miles of parkways and roads and for the provision of

20. Map of Lower Gatineau Park, showing progress of parkway construction.

21. Champlain Lookout, Gatineau Parkway

22. Skiing in Gatineau Park

23. Lac Philippe

camping, sport and other facilities and improvements. Gatineau Park itself will have an eventual 75,000 acres of planned area and will provide a scenic playground and backdrop to a functionally designed capital of outstanding beauty. Some of the completed or current projects are pictured below.

The Capital of Tomorrow

Canada's Capital of Tomorrow will feature easy access throughways, the construction of many new public buildings for administrative and cultural purposes, the decentralization of the public service, residential zoning, a greenbelt and other planned improvements—all in a setting of great natural beauty.

A National Auditorium, National Zoological and Botanical Gardens, a National Sports Centre and a new National Museum are recommended in the Master Plan. Glimpses of that future program are given below.

Federal Building Projects.—Carrying out the policy of decentralizing departmental buildings where possible, as a means of avoiding increased downtown congestion and of permitting civil servants to live in residential areas near their offices, as well as for Civil Defence reasons, the Government has acquired or designated large building sites in all sections of the Capital; land now available will meet federal building needs for the foreseeable future. The FDC, as required by law, has approved and in some cases co-ordinated development of a dozen major site plans and has approved architects' plans for about 150 federally constructed buildings. Some of the sites, such as that for the new Government Printing Bureau in Hull, contain one major building. Others, such as Tunney's Pasture in west Ottawa contain a number of buildings for different branches of the Government.

Departments or Crown agencies re-located, or to be re-located within the next two or three years, include: the Department of Public Works; Department of Public Printing and Stationery; Dominion Bureau of Statistics; Department of Veterans Affairs; branches of the Department of National Health and Welfare; National Research Council; Defence Research Board; National Aeronautical Establishment; airport operations of the Department of Transport and the RCAF; Department of Mines and Technical Surveys; Post Office Department; Department of Agriculture; Atomic Energy of Canada. Largest department still to be re-located is National Defence, which is housed in wartime temporary buildings in central Cartier Square. A permanent National Art Gallery will be constructed on this site on the south edge of Confederation Park when National Defence Headquarters is re-located. In the meantime the Gallery will be re-housed temporarily in a new dual purpose building on the west side of the Park. A new institution, the National Library, will be constructed at the west end of downtown Wellington Street overlooking the Ottawa River.

The Master Plan also contains recommendations for the location and construction some time in the future of a National Auditorium, National Zoological and Botanical Gardens, National Sports Centre and a new National Museum.

Federal-Provincial-Municipal Projects.—Though federal-municipal joint projects were not uncommon prior to the advent of the National Capital Plan (the siting of the National War Memorial in Confederation Square and the widening and boulevarding of part of Elgin Street in 1939 was one of the largest; and some federal parks have been developed on city owned land leased to the FDC), since 1946 their number and importance have increased considerably. Such projects may be initiated either by the civic or federal authorities. Following are some large scale examples:—

- (1) The Mackenzie King Bridge, over the Rideau Canal in Confederation Park, first completed project in the Master Plan, was an FDC project to which Ottawa contributed 10 p.c. of the cost.
- (2) The reconstruction of Sussex Street and the building of the Colonel By Bridges over the Rideau River at Rideau Falls was a city project, to which the FDC contributed \$1,010,000.
- (3) The Dunbar Bridge extending Bronson Avenue over the Rideau River was a city project, with the FDC contributing 16.6 p.c. of the cost.
- (4) The Queensway, the east-west limited-access roadway on the CNR crosstown tracks right-of-way is a federal-provincial-municipal project, with the FDC providing most of the right-of-way, a contribution valued at about \$5,500,000. Actual construction is being carried out by the Ontario Department of Highways with the Trans-Canada Highway Authority of the Federal Department of Public Works and the City of Ottawa contributing financially.

The policy in the Master Plan of decentralizing federal departmental buildings required extension of water and sewage services in advance of actual municipal need, and the FDC is using about \$2,500,000 of the National Capital Fund to pay interest on debentures for these works over the eight to ten year period calculated as being "in advance of need". Other projects are as follows:—

- (1) The widening of Carling Avenue by the city involves a contribution of federally owned land valued at about \$500,000.
- (2) Improvements to the Chaudière crossing of the Ottawa River between Hull and the Capital were carried out by the Commission.
- (3) In Quebec the first two miles of the Fairy Lake Parkway, a local parkway serving Hull's west end, have been constructed by the FDC on land provided by the City of Hull.

Affecting many waterfront municipalities in the District is the problem of pollution of the Ottawa River by the discharge of raw sewage and industrial waste by communities along its shores. A solution for this and other problems is being sought by federal, provincial and municipal authorities concerned.

Municipal Projects.—In the purely municipal category, Ottawa and Hull have had to meet the demands for very costly services, schools and roads for new residential areas rapidly developing under the pressure of increasing population. Ottawa annexed 21,000 acres of the adjoining municipalities in 1950, and considerable progress has been made on a sewage and waterworks extension program to service the new areas.

Section 3.—Wildlife Resources and Conservation*

The Canadian Wildlife Service.—The Canadian Wildlife Service of the National Parks Branch, Department of Northern Affairs and National Resources is responsible for attending to wildlife matters coming within the jurisdiction of the Federal Government, except those within the purview of the National Museum and certain activities closely related to Indian affairs.

Its functions include acting in an advisory capacity with regard to conservation and management of wildlife in the Northwest Territories; advising and co-operating with the National Parks and Historic Sites Division regarding fish and wildlife problems in the National Parks; and administration of the Migratory Birds Convention Act in conjunction with the Royal Canadian Mounted Police and in co-operation with the provincial game authorities. The Canadian Wildlife Service also handles national and international problems relating to Canada's wildlife resources and co-operates with governmental and other agencies having similar interests and problems in Canada and elsewhere.

The Service issues permits for bird-banding in Canada and is the Canadian clearing-house for bird-banding information. It issues permits to qualified persons to take migratory birds for scientific purposes; to take and possess migratory birds for propagating purposes; to collect eiderdown; and to engage in the business of taxidermy.

The Canadian Wildlife Service plans and carries out research into the ecology, numbers, food, shelter, migration, reproduction, diseases, parasites, predators, competitors and uses of wild creatures in Canada. In certain of these investigations, e.g., the mid-winter waterfowl inventory, it works in close co-operation with United States Fish and Wildlife Service and with federal, provincial and private agencies in Canada. The Service is responsible for the establishment and administration of bird sanctuaries under the Migratory Birds Convention Act. On Dec. 31, 1954 there were 88 bird sanctuaries with a total area of more than 1,800 sq. miles.

The Limnology Section of the Service concerns itself with research leading to the maintenance and improvement of sport fishing, the control of aquatic and semi-aquatic insects, the control of algae, and with other biological problems that arise in regard to water areas in the National Parks. It also acts in an advisory capacity to the Northern Administration and Lands Branch in connection with aquatic biological matters.

A series of special articles relating to the wildlife resources of Canada are being carried in the Year Book. Articles on Migratory Bird Protection in Canada, Game Fish in Canada's National Parks, The Barren-Ground Caribou and Migratory Bird Legislation

* Prepared by the Canadian Wildlife Service, Department of Northern Affairs and National Resources, Ottawa.

were carried in the 1951, 1952-53, 1954 and 1955 editions respectively. The following article on Scientific Management of Game Fish in Canada's National Parks describes the methods by which, through research, angling opportunities are maintained and improved in the National Parks.

SCIENTIFIC MANAGEMENT OF GAME FISH IN CANADA'S NATIONAL PARKS

One of the main attractions of Canada's National Parks as resort areas is the game fish to be found in their myriad lakes and streams. Each year an increasing army of anglers find relaxation and enjoyment fishing these waters. Some of the most popular lakes were, by nature, well supplied with fish when the Parks were established but many of them were without fish stocks of any kind. Their present fruitful state is the result of a policy of management and of years of research into the problems encountered in maintaining fish stocks and improving them in lakes and streams of diverse physical conditions in all parts of the country.

The solution of problems affecting National Park waters is undertaken by two Federal Government agencies working in close co-operation. The Canadian Wildlife Service acts in an advisory capacity regarding all fish and wildlife matters in the National Parks and its officers conduct scientific investigations as and where required. Officers of the National Parks Service guided by the results of these investigations, operate hatcheries and egg collecting stations, distribute fish, collect data from anglers and perform other related duties.

BIOLOGICAL INVESTIGATIONS

Before fish are introduced into a lake or when a change in the fish population of a lake seems desirable, a biological survey of the area involved is conducted. A basic biological survey consists of obtaining as much information as possible regarding the fish present in a lake, the chemical composition of the water including the presence and concentration of dissolved gases, the amount and type of microscopic food available in the water, and the numbers and kinds of food animals present on the shores and in the bottom mud. From this basic information it is frequently possible to determine which species of fish might be most easily introduced into a given lake, which should be encouraged when several species are present, and which are most suitable in lakes heavily or lightly fished.

The first step in an investigation is to observe and record the physical properties of a lake. Soundings are made with a calibrated line attached to a weight or through the use of a small portable electronic echo sounder. In either method the soundings are made from a boat propelled across the surface in straight lines between fixed points on opposite shores. Using these soundings a contour map is prepared from which may be calculated the areas and volumes of the water strata of different depths. A temperature series is taken from the surface of the lake to the bottom at the deepest point. A common method is to suspend a reversing thermometer at the desired depth until it has assumed the temperature of the water. A release slipped down the line supporting the instrument turns it upside down, thereby breaking the mercury column so that it does not change position while being drawn to the surface through intervening layers of water. A more recently perfected method uses an electrical resistance thermometer which, when lowered to the desired depth, gives an immediate reading on a dial in the boat. This instrument can be used to take a series of temperatures without handling between observations and thus like the echo sounder saves a great deal of time.

Light is usually a necessity for fish life because aquatic plants, on which some fish feed, depend on light for their growth. In a clear lake light may penetrate to great depths but in a heavily silted glacial lake it may penetrate only a few inches. Food plants grow as poorly in a heavily silted lake as do vegetables under heavy shade. Where the plants are scarce small water animals can find little or no food and the fish feed chiefly on insects that drop into the water near the shore.

The transparency of water to light of different colours and the colour of the water itself may be measured with portable equipment. A rough determination of transparency may be made by suspending a white pie plate or similar-sized object from the end of a calibrated line, lowering it into the water and observing the depth at which the plate is just visible. Unless silt or other non-organic matter is present a low transparency usually indicates high productivity because the heavy growth of microscopic plants in a productive lake reduces the transparency of the water.

The next step of investigation is to study the water itself and the dissolved gases it contains. Chemical factors, dissolved gases particularly, may change quite rapidly after a water sample has been obtained so that immediate chemical analysis is made by the use of a small portable chemical kit carried in the field. The amount of oxygen dissolved in the water is of the same importance to fish as the amount of oxygen in the air is to human beings. Determinations of dissolved oxygen and of other chemical factors of the water are made at various depths so that the portions of the lake suitable for occupancy by game fish of various species may be located. The examination of water is often extended to include an analysis of total dissolved materials, dissolved carbon dioxide, total hardness and other factors.

Plankton, the microscopic plants and animals found in the open waters of lakes at all depths, is the food of practically all young fish and minnows and even of some large fish which can collect it efficiently. Samples of plankton are secured by allowing the water to pass through nets of fine silk or mechanical traps containing silk filters (30,000 openings per square inch) and the tiny creatures retained are preserved for laboratory examination. Shrimps, snails, small clams, immature insects and similar organisms that inhabit the bottom deposits of a lake are also the food of many fish. A box-like dredge, usually six or nine inches square, secures samples of mud from an area of bottom. This mud is washed through a screen and the live animals remaining are preserved for laboratory analysis. The number of animals thus secured from 36 sq. inches of bottom mud may vary from a few to more than 1,000.

Fish for analysis are usually secured through the use of nets or traps or other types of equipment commonly used in the commercial fishing industry. For most purposes gill nets of selected sizes set in a standard manner are used. By operating standard sets of nets under standard conditions it is possible to compare populations of fish in different bodies of water and thus secure information by relating unknown fish populations to those made familiar through previous experience. The fish are measured and weighed, their sex, condition and stomach contents examined, parasites observed and finally a number of scales are removed for use in determining the age and history of the specimen.

The type of information secured for streams is much the same as for lakes. Streams however are somewhat more difficult to deal with because their flow varies, the fish may migrate and the amount of food and shelter for fish is seriously reduced at times. Mountain streams because of their cold water, severe freshets and steep changing rocky beds, offer additional difficulties.

Some types of observations of fish and their environment cannot be made with conventional limnological equipment. Diving equipment may sometimes be useful. At great depths in cold water with light penetration reduced by silt it has been desirable to use underwater television equipment for extensive observations. The first North American use of such equipment in freshwater fisheries research was made by the limnologists of the Canadian Wildlife Service in Banff National Park in 1952. The closed circuit television system used was designed, built and operated by the National Research Council. Since this pioneer effort there has been a rapid expansion of the use of television in limnological and oceanographic research in several countries.

LABORATORY STUDIES

After the summer field investigations have been completed the laboratory takes over. Plankton samples are examined and the kinds and numbers of organisms enumerated. The weight of these organisms, though slight, is determined and, through a knowledge of the amount of water filtered to obtain the sample, the total numbers and weights of the organisms in the whole or any part of the lake may be calculated. When a series of samples is taken throughout the year calculations are made of the annual production of microscopic fish food in the lake and the rate at which it is produced. The samples of bottom animals are treated in a similar manner and the amount of animal fish food per acre of bottom determined. This may vary at any time during the summer from a few pounds to more than 30 pounds per acre. Because the crop is renewed several times each season the yearly production may amount to more than one hundred pounds per acre of bottom.

A detailed examination of preserved whole fish specimens provides information regarding life history and racial characteristics of the fish as well as a means of comparing the relative condition of fish from various water areas. An analysis of stomach contents provides an index of the food of the fish and, taken in conjunction with samples of plankton and bottom fauna from the same area, may indicate preference for certain food items or actual selection of one particular type of food from among many. Food selection by some species of fish is well marked and, since some species feed at night, it appears that senses other than sight are involved in some types of selection. An examination of the reproductive organs of the fish indicates whether it is mature or immature and if mature, whether or not its reproductive potential is normal. Internal parasites in fish are common and the kinds of parasites may have some bearing on the health and reproductive capacity of the fish.

Fish scales offer one of the most important items for laboratory study. Not only can the age of a fish and its growth rate be determined from an examination of its scales but, by careful measurement of the various year zones on the scales, it is possible to calculate the size of the fish at previous ages and thus the growth rates for various periods in its past history. Through careful examination of many fish and their food organisms and an evaluation of their physical and chemical environment it is possible to detect the ills of the fish population and to make plans to improve its future welfare.

HATCHERIES AND OTHER MANAGEMENT METHODS

Improvement of a fish population may involve improvement of the habitat to furnish more food, more shelter, more or better spawning facilities, less competition from other species of fish, or any combination of these activities. It is sometimes desirable to add additional fish to a body of water or to replace those present with members of a different species. To perform these latter functions hatcheries furnish a convenient method. The National Parks and Historic Sites Service operates three fish hatcheries for the production and distribution of fish, under desirable circumstances, in National Park waters. On occasion fish from other sources, both provincial and federal, are made available for release in National Parks.

According to the limits imposed by distance, means of transportation, requirements for fish introduction and other factors, fish for release in Park waters vary in size from unhatched eyed eggs through several sizes of fingerlings to five pound adults. Where weight is a problem, as in transportation by air, the Canadian Wildlife Service has perfected a technique of anaesthetizing fish to reduce their requirement for dissolved oxygen and then transporting them packed in crushed ice without water. The saving in weight results in a substantial saving in cost and the fish can be transported long distances with no ill effects.

Based on modern ideas of hatchery use, the present game fish policy of the National Parks Service is to carry out stocking operations only where natural reproduction is limited or absent, where a population of fish is wiped out through winter-kill or other catastrophe, or where a species more adapted to local conditions is being introduced. The introduction and maintenance of populations of exotic species are carried on only under special conditions. A program of marking fish by tagging and fin clipping makes it possible to study the history of a fish from release to capture by anglers. Through this program it is possible to demonstrate the rapid growth attained in some waters and the high return to anglers from fish stocked under certain conditions. This information permits planning for the most satisfactory use of hatchery products. An increasing proportion of fish distributed from National Parks hatcheries consists of large fingerlings and yearlings, as experience has shown excellent survival for fish of this size.

In addition to the introduction of additional stock from hatcheries other methods of maintenance and improvement are used. In areas where no spawning grounds exist, artificial spawning areas are sometimes created by dumping loads of gravel in appropriate places on the ice of a lake during winter; when the ice melts, the gravel falls to the bottom.

In some waters food is scarce and fish are crowded and stunted. The removal by poison or nets of some of the fish reduces the competition for food and permits the remaining fish to grow to a size more attractive to the angler. Another way of improving conditions for a stunted fish population is either to increase the amount or to change the form of food available in the lake. This may be done by introducing forage fish which feed on microscopic animals and are themselves eaten by game fish. Where conditions are suitable the water may be fertilized thus permitting the increased growth of microscopic plants and the animals that feed on them. Competition for food between desired game fish and undesirable coarse fish may be controlled by removing or reducing the latter thus leaving more food available for the desired species. Competition with and predation by other species may be reduced by the introduction of desirable fish of suitably large size. Production of varieties of fish with new and useful characteristics is being carried on through cross-breeding. The "Splake" or "Wendigo" developed in the National Parks by crossing eastern brook and lake trout is now in successful use in the fish cultural programs of several provinces in Canada and in states of the USA as well as in the National Parks. Work is now in progress in National Parks hatcheries on the production of other varieties of hybrid trout more adaptable to certain conditions than species or hybrids now known.

Protection of forests in the National Parks from fire is an important part of fish management. Alteration of a watershed by fire results in a more rapid runoff and more serious flooding and silt problems in streams. Removal of forest cover also permits water temperatures to rise through exposure to the sun. This may render areas unsuitable for game fish.

Angling regulations offer an excellent means of managing fish populations. A wise choice of close season, minimum legal length and daily catch limit result in the best use of the available supply of game fish and its equitable distribution among the angling public.

CREEL CENSUS

Although much information may be secured regarding fish, their food, their reproduction and other phases of their life histories through field and laboratory examination of them and of the water areas in which they are found, it cannot always be predicted what size or species of fish an angler will take from a lake or even that he will catch anything. Because the game fish populations in National Parks waters are largely used for public enjoyment and because a knowledge of the fish removed from them is of vital importance in the maintenance of the fish populations, recourse is made to a creel census to secure data regarding the fish taken by anglers.

The creel census is based on voluntary completion by anglers of special cards designed to secure data regarding the numbers, species and lengths of fish caught, the type of lure used, the time of day and, most important, the time in hours and minutes required for the capture. Each angler is requested to complete a return for each day's fishing. Returns are regarded as confidential in order to overcome the traditional reluctance of an angler to report a small or nil catch. During 1954 creel census cards were returned reporting the capture of more than 50,000 fish from 125 lakes and 84 streams in 11 National Parks.

An analysis of this information and its correlation with corresponding data for earlier years is of inestimable value to fish management policy and practice. If the creel census data indicate that too large a proportion of the angling catch consists of immature fish, then steps may be taken to protect the desired portion of the fish population by changing the regulations. If the fishing effort or number of hours required to capture a fish becomes progressively greater for a given species during succeeding years, this is considered an indication of imminent depletion of this species and steps are taken to check it.

The maintenance of good angling in the National Parks of Canada depends largely on the co-operation of the anglers. Experience has shown that this co-operation is always freely available from those who understand the purposes for which this great natural heritage is maintained.

PART III.—CLIMATE AND TIME ZONES

Section 1.—Climate

A comprehensive discussion of the climatic regions of Canada is available in the 1948-49 Year Book, pp. 41-62, and detailed tabulations of climatic factors covering 36 meteorological stations located mostly at well known or populous centres are given in the 1950 Year Book, pp. 35-70. Other articles appearing in previous editions are listed under "Climate and Meteorology" in Chapter XXIX of this volume.

Table 1 gives long term temperature and precipitation data for 35 representative Canadian stations; Tables 2 and 3 provide monthly temperature and precipitation data during 1954 for these same stations. These are mostly well-sited or populous places with climates fairly representative of a considerable area. Each of the figures given under "Temperatures" are of course averages obtained over the period of observation. Under "Precipitation", in calculating the annual total, inches of rain is considered the total depth of water accumulated on a hypothetical horizontal impervious surface without evaporation. Similarly the depth of snow given is that which falls on a horizontal surface without settling, melting or sublimation. Because the depth of water obtained from melting newly fallen snow is roughly one-tenth of the depth of the snow, the total precipitation is obtained by adding together the total rainfall and one-tenth of the depth of the newly fallen snow. A day with rain is, for the purpose of these tables, one on which 1/100 of an inch or more falls and a day with snow is one with at least 1/10 of an inch of newly fallen snow. Whenever the temperature four feet above the ground falls to 32°F. or lower the day is counted as a day with frost. The average date of the last spring frost and of the first frost in autumn marks the approximate period continuously free from frost.

1.—Long Term Temperature and Precipitation Data for 35 Representative Stations

¹ Day-degrees represent the difference in temperature between the mean temperature of the air and the temperature of 65°F. multiplied by the number of days during which the outside temperature was lower than that figure, computed for the period Sept. 1 to May 31.

² Total is number of days rainfall plus number of days snowfall.

Fuel consumption for heating purposes will be proportional to these totals.

2.—Temperature Data for 35 Weather Stations by Month 1954

Section 2.—Standard Time and Time Zones

Standard time which was adopted at a World Conference held at Washington, D.C. in 1884, sets the number of time zones in the world at 24, each zone extending over one twenty-fourth of the surface of the earth and including all the territory between two meridians 15° longitude apart. Standard time is Greenwich time, all other time zones being a definite number of hours either in advance of or behind Greenwich.

Canada has seven time zones, the most easterly being Newfoundland standard time, three hours and thirty minutes behind Greenwich mean time. In the west, Pacific standard time, used throughout British Columbia and part of the Northwest Territories, is eight hours behind Greenwich, and Yukon standard time, used throughout the Yukon Territory, is nine hours behind Greenwich. Some municipalities adopt the time used by the local railways which, in certain cases, differs from the standard. There are also villages that adopt such time as seems best to suit their convenience but in general the legal boundaries of the different time zones are actually in use.

Daylight Saving Time.—For some years before World War I there was active propaganda, particularly in the cities, for the use during the summer months, of an earlier time usually referred to as 'daylight saving time', one hour ahead of standard time. It was considered from the economic as well as from the health point of view that people in industrial towns and cities would gain by having longer periods of sunlight at their disposal for recreation. Canada adopted daylight saving time in 1918 but the Canadian Act lapsed at the end of that year. Since that date however various towns and cities have adopted daylight saving bylaws for varying periods in the summer months.

Legal Authority for the Time Zones.—Most of the regulations made in Canada concerning standard time have been passed by the provincial legislatures and the Northwest Territories Council. The exceptions include: the Daylight Saving Act of 1918; an Order in Council (P.C. 4994) issued in 1940 requiring the continuation, for an additional period, of daylight saving time in a number of places in Ontario and Quebec where it had already been in force for the summer; and an Order in Council in 1942 (P.C. 547) making daylight saving time nationwide—later revoked by Order in Council (P.C. 6102), ending the observance on Sept. 30, 1945. Legislation, besides determining the boundaries of zones, regulates such matters as the times of coming into effect or expiration of Acts, ordinances, contracts and agreements, times of opening and closing registration offices, law courts, post offices and other public offices, times of open or close seasons for game, and times of opening and closing business houses and places of amusement.

PART IV.—GEOPHYSICS AND ASTRONOMY

The research activities carried on in Canada in the fields of geophysics and astronomy together with the modern application of such studies is dealt with in the two special articles that follow.

GEOPHYSICS IN CANADA*

Man's relation to the earth is such an intimate one that throughout the centuries he has studied it intensely for many different purposes. In ancient times his purposes were mainly connected with travelling, surveying, mining and navigating, and from such investigations have descended the modern studies of geography, geodesy, geology and geophysics, respectively.

Geophysics began with the observations made by early navigators of the weather, ocean tides and the lodestone. These studies gradually developed into modern meteorology, physical oceanography and terrestrial magnetism. Besides being of interest to

* Prepared by Dr. C. S. Beals, Dominion Astronomer, Ottawa, and Dr. J. T. Wilson, Department of Physics, University of Toronto.

navigators these subjects had in common a need for precise measurement and thus came to be studied by physicists. To them were added other physical studies of the earth so that geophysics now includes also seismology—the study of earthquakes; hydrology—the study of waters in rivers, lakes, glaciers and underground (but not in the oceans); volcanology—the study of volcanoes and the earth's heat; tectonophysics—the study of the forces which build mountains and slowly cause changes of level of land and sea; the study of the earth's gravity; and several minor studies such as the determination of the ages of ancient rocks and minerals from their content of radioactive elements.

Furthermore during the past thirty years it has been realized that many of the methods first developed for studying the earth as a whole can be used to seek deposits of petroleum and useful minerals. Thus there are now magnetic, electrical, gravitational, seismic and radioactive methods of geophysical prospecting and these are used to direct drilling in almost all the searches going on in Canada for oil and gas. Both airborne and ground devices are widely used by mining companies to prospect for metals.

It may at first sight seem surprising that hidden deposits of minerals and petroleum can be found by investigations carried out above them on the surface of the ground and even more surprising that anything can be discovered about a place so remote and unapproachable as the interior of the earth. A moment's reflection will suggest that in physics the study of remote objects has become commonplace. Astronomers speak every day about galaxies which are unimaginably distant from earth and about conditions in the interior of inconceivably hot and dense stars. So also nuclear physicists discuss the behaviour of the interior of atoms while newspapers freely discuss such things as electrons, neutrons and isotopes which are only physical concepts to explain indirect observations about things much too small ever to be seen. In comparison with these wonders the interior of the earth is almost prosaic. The centre is no farther from Western Canada than is Ireland (4,000 miles), the temperature there is probably about that of an electric arc (4,500°C.) and the pressure there (3,600,000 atmospheres) is only ten times as great as that already obtained in laboratories.

Thus geophysics is the name given to all those studies, by physical means, of the whole earth including its solid part, its waters and its atmosphere and it includes, as a very important aspect, methods of geophysical prospecting. The examinations of surface rocks, minerals and ores where they are exposed on land remains the field of geology. It is obvious that there should be close co-operation between studies so intimately related as geology and geophysics. Geological methods are more direct, they are often cheaper, but they are limited in scope to the land surface only, whereas geophysics embraces the study of all the earth from its centre to its outermost atmosphere.

This article however deals only with phenomena on and beneath the earth's solid surface. Atmospheric phenomena such as the aurora, the ionosphere and the weather as well as physical oceanography are excluded for reasons of simplification. The Dominion Observatory and the Geological Survey at Ottawa and the Physics Department of the University of Toronto are carrying out major programs of geophysical research. Several other universities across the country and various provincial governments are also doing geophysical work and the major oil companies as well as numerous geophysical prospecting concerns have developed geophysical techniques as their most effective approach to the problem of finding oil fields and mineral deposits.

THE DOMINION OBSERVATORY

Terrestrial Magnetism.—Studies of the earth's magnetism have been carried on by the Dominion Observatory at Ottawa since its founding in 1905. For many years the main effort was in the field of magnetic mapping and this is still a major effort of the Observatory. In order to construct accurate magnetic maps of Canada, observations of the direction and strength of the magnetic field at ground level have been made at 1,500 stations distributed as uniformly as possible over the whole country and observations at certain of these locations are repeated every few years in order to detect the slow

continuous changes in the earth's magnetism known as secular variation. Owing to the difficulty of covering a country of so large an area as Canada with ground observations, a gyro-controlled airborne magnetometer has been developed which is able to make the necessary observations of magnetic intensity and direction from the air. Although this instrument is dependent on ground observations for calibration and standardization, it has the great advantage of making continuous records of the magnetic elements along the line of flight and can accumulate in a few hours magnetic mapping information which would otherwise take years to obtain. It is also able to operate in the Arctic regions and over bodies of water where observations at ground or water level are difficult to secure. Magnetic maps of Canada showing the horizontal, vertical and total force, the declination, the rate of secular change and the position of the north magnetic pole, are issued every five years. In addition to purely magnetic maps, more detailed information on magnetic declination is provided for all large scale maps and especially for marine and air navigation charts issued by the Government of Canada. Special surveys are frequently undertaken to provide base stations for geophysical surveys in mineralogically important regions and detailed magnetic data are made available to those requiring them for scientific or commercial purposes.

In addition to the work on mapping, magnetic observatories are maintained at Agincourt, Ont., Meanook, Alta., Baker Lake and Resolute Bay, N.W.T. These observatories are for the purpose of studying the daily and seasonal changes in the earth's magnetism as well as the sudden and unpredictable phenomena known as magnetic storms. One major function of the magnetic observatories is to act as controls for ground and airborne observations which would otherwise be difficult of interpretation when the earth's field is rapidly changing.

An equally important aim of the Observatory work is a study of the causes of short term magnetic variation which appear to be largely dependent upon the effects of the sun's radiation on the upper atmosphere of the earth. Close co-operation with other magnetic observatories throughout the world is maintained, particularly in connection with the interpretation of magnetic storms and their relationship to sunspots, auroras and other phenomena of the upper atmosphere. An additional type of observation now being undertaken is the measurement of earth currents which are closely associated with atmospheric magnetic phenomena.

Supplementing the activities outlined above, studies now in progress are aimed at a clearer understanding of the origin of the earth's magnetic field (now considered to be a consequence of motions in the earth's liquid core) and its long term variations. Evidence for such variations is found not only in the familiar secular changes which are confirmed on the basis of a few years of observation but also in the magnetization of rocks deposited in previous geological epochs, some of which indicate a direction of the earth's field very different from that prevailing today. An extensive investigation is now in progress to examine the magnetization of sedimentary and igneous rocks of known geological age throughout Canada to see whether the information which they give can be used to construct a more complete theory of the earth's magnetism.

Gravity.—Variations of gravity over the earth's surface are both common and of great scientific and commercial importance. Measurements of gravity were first made by observing the frequency of vibration of a pendulum, the frequency increasing with increasing gravity. It is still the standard method of comparing the force of gravity at widely separated points on the earth's surface. In recent years it has been supplemented and to some extent superseded by the use of an instrument called the gravimeter or gravity meter which operates on the principle of the spring balance and has great advantages from the point of view of portability and speed of operation.

Dominion Observatory studies of gravity are aimed at achieving a clear understanding of the major variations over the surface of Canada as a whole. In order to do this the following types of observations have been carried out:—

- (1) Using pendulum equipment, gravity has been observed at a series of primary base stations suitably located across the country. These bases have all been connected to the national base at Ottawa and it, in turn, has been compared with the international standard at Potsdam, Germany. The system of pendulum bases has been extended beyond the borders of Canada to include 20 stations located from Mexico City across the United States and Canada to Fairbanks, Alaska. Similar bases in Canada have been occupied by United States scientists.
- (2) Using the primary bases for purposes of calibration and as points of departure, a system of 100 secondary bases has been set up from Newfoundland to British Columbia and extending well into the Arctic and Subarctic regions of Canada. The values of gravity of these secondary bases are of high accuracy, comparable to the primary bases, and their purpose is to ensure that regional gravity surveys in all provinces and in the Northwest Territories are on a uniform system.
- (3) Utilizing the primary and secondary bases, a series of regional surveys has been carried out with the aid of gravimeters and a substantial proportion of the land area of the country has been covered. In southern Canada the regional surveys have been carried out by automobile, gravimeter observations being made every eight miles. In northern Canadian Shield areas where lakes are numerous, light aircraft have been used for transportation. The actual observations of gravity are made on the shores of the lakes and the stations are on the average about 20 miles apart. The total number of observations made up to the end of 1954 was 11,244. Observations have been extended to all provinces of Canada and as far north as Great Bear Lake in the west and Baffin Island in the east. The observations are being used as bases for commercial geophysical surveys (especially in the Prairie Provinces), for studies of isostasy and geodesy, for the investigation of the roots of ancient mountain ranges and for general studies of the character of the earth's crust in different parts of Canada.
- (4) Detailed surveys aimed at discovering or outlining geological features of anomalous density and moderate size are frequently carried out in limited areas. Such features include ore-bodies, salt deposits, lava flows, geological fault lines, igneous intrusions and ancient meteor craters. Though the Observatory does not itself carry out geophysical prospecting, members of its geophysical staff have spent a good deal of time and energy on the theory and practice of gravity methods as an aid in the search for economic minerals.

Seismology.—For the purpose of recording earthquakes occurring in Canada and in other parts of the world the Observatory maintains eleven seismograph stations located at Halifax, N.S., Seven Falls, Que., Shawinigan Falls, Que., Ottawa, Ont., Kirkland Lake, Ont., Saskatoon, Sask., Banff, Alta., Victoria, B.C., Horseshoe Bay, B.C., Alberni, B.C. and Resolute, N.W.T. The records from these stations are used partly to delineate areas of unusual earthquake hazard and special three-station networks for this purpose are maintained on the Pacific Coast and in the Rocky Mountains. An equally important function of this chain of stations is, in co-operation with other countries, to provide data for the study of the earth's crust and its interior structure. Especially important to this work is the station at Resolute in the Arctic whose location far from any other installation makes it a particularly valuable unit in the world seismographic network.

Major Canadian emphasis in earthquake research is based on a study of seismological records in Canada and other countries to determine the character of the earth movements which cause earthquakes. Though some earthquakes have their origin at the earth's surface, the majority occur at depths of tens to hundreds of miles so that only secondary effects are directly observed. Methods have been devised for deriving the depth and direction of the true earth motions by a graphical analysis of initial shocks recorded by seismograph stations throughout the world on the occasion of a major earthquake. The results are being applied to investigations of the origins of mountains and of other related features such as island arcs and ocean deeps which are found in the vicinity of active earthquake belts.

In addition to the study of earthquakes, the methods of explosion seismology are being used to study the depth and structure of the earth's crust and of various irregular geological structures found within it. For this purpose radio methods are used to transmit the impulses from seismic detectors to a central recorder so that arrays of seismographs as much as

thirty miles in length can be set up with a minimum of difficulty. Among results to date are a determination of the thickness of the crust of twenty-five miles, with a less complex structure than had originally been supposed. Similar methods have been applied experimentally to problems of economic geology and plans are under way to investigate the subsurface structure of a portion of the Continental Shelf of Eastern Canada.

GEOPHYSICAL WORK OF THE GEOLOGICAL SURVEY

The Geophysics Division of the Geological Survey of Canada maintains a Canso aircraft for the purpose of flying an ASQ-3 magnetometer and AEP1903R Mark II scintillation counter. Regional surveys of approximately 40,000 line miles are flown each year. The magnetic data are compiled and published by the staff of the Geological Survey in the form of aeromagnetic maps. The radioactive data are being compiled and will be published in the form of maps on a scale of eight or sixteen miles to the inch. These gamma radiation maps will make it possible to compare the radioactivity of different rock types over broad areas and to compare the general background activity of different geological provinces.

The Geological Survey has started a program of interpreting the aeromagnetic data in relation to the geology on a regional basis. For the past two summers work has been carried on in the Eastern Townships of Quebec. One negative anomaly, the Yamaska, is being studied in detail in relation to the ratio of oxide minerals of iron and titanium, namely, hematite, ilmenite and magnetite. Remanent magnetism and magnetic susceptibility, chemical and petrographic investigations are being made.

Equipment for the study and investigation of physical properties of rocks is being constructed in the Geophysical Laboratories. It is planned to compare the magnetic susceptibility as measured by an astatic method with that as measured by the alternating current method. Also by magnitude and phase relationships in the alternating current method, the conductivity and dielectric constant of rock materials will be separated and analyzed over a range of frequencies. This will be a valuable aid in interpreting electromagnetic data for prospecting for massive sulphide conductors. Eventually physical rock properties will be published for typical rocks in areas that have been flown with the airborne magnetometer.

GEOPHYSICS AT CANADIAN UNIVERSITIES

The teaching of geophysics in Canadian universities can be said to have started at McGill University, Montreal, Que., about 1926 when the late Professor A. S. Eve and Dr. D. A. Keys, now Vice-President of the National Research Council, were invited by the United States Bureau of Mines and by the Geological Survey of Canada to investigate geophysical methods of prospecting for minerals. They started to give courses which are still being conducted and wrote one of the standard textbooks on the subject, *Applied Geophysics* (now in its 4th edition). Their example was soon followed elsewhere in eastern Canada and courses in prospecting for minerals have been given for some years now at Laval University, Quebec, Que.; the University of Montreal, Montreal, Que.; Dalhousie University, Halifax, N.S.; and the University of New Brunswick, Fredericton, N.B. The maritime location of St. Francis Xavier (Antigonish, N.S.) and Dalhousie Universities has led to their co-operation with the Federal Government in oceanographic studies and the latter also maintains a government seismograph station for recording earthquakes.

Professor L. Gilchrist of the University of Toronto was early invited to join Professors Eve and Keys and, as a result, courses were started at Toronto from which more than one hundred and fifty men, twenty-five with Doctorate degrees, have graduated as specialists in geophysical prospecting—most of them within the past ten years. They are now taking part in the search by new methods for minerals and oil in Canada. A well equipped laboratory has also been established for measuring the age of ancient minerals and rocks by

radioactive methods. In addition the University of Toronto co-operates with the Meteorological Division of the Department of Transport to train physicists as meteorologists and gives a course leading to a Master's degree in that subject.

At Queen's (Kingston, Ont.) and McMaster (Hamilton, Ont.) Universities and the University of Western Ontario (London, Ont.) courses in geophysical prospecting are given. The latter has made a specialty of measuring the earth's internal heat while at McMaster the ages of minerals have been determined in conjunction with the university's large program of nuclear studies.

In the universities of Western Canada there has also been specialization. The Universities of Manitoba and Saskatchewan have installed apparatus by which carbonaceous material up to several tens of thousands of years old can be dated. Another such installation is at Dalhousie University. At the University of Manitoba new methods have been developed for detecting and prospecting for radioactive ores from the ground or by air. The University of Saskatchewan has capitalized on its northern location to make outstanding studies of the aurora, of the earth's magnetic field, of the ionosphere, and of radio propagation in Arctic and Subarctic regions. A seismograph station is also maintained at Saskatoon for the Dominion Observatory.

Geophysical prospecting is taught at the Universities of Alberta and British Columbia and the latter has the only Oceanographic Institute at any Canadian university.

Canadian universities are well equipped to train men and carry out research in most phases of geophysics—still a new and expanding subject in whose many and varied branches there exists a great demand for young men and women. Those who decide upon a career in geophysics are not entering upon a field of narrow specialization but are studying a subject as broad as the earth itself.

APPLIED GEOPHYSICS IN CANADA

The advance of geophysics has awaited the development of modern physics so that it is only within the past twenty years—more especially within the past ten years—that geophysics has come to play an important part in the Canadian economy. The various fields of investigation which comprise earth physics lead to methods that may be applied commercially in the search for oil and minerals. In the mining industry Canada has been the scene of many new developments in geophysical exploration, and today probably leads the world from the point of view of diversification of methods and volume of activity. One gauge of this leadership is the \$30,000,000 being spent each year in Western Canada on geophysical exploration for oil alone.

The most successful technique so far developed for mapping underground structures associated with oil accumulation is reflection seismology. Elastic waves generated by artificial explosions are recorded on portable seismographs set up nearby. Certain phases on the records may be identified as waves reflected from various geological horizons, and the arrival times of these waves give a measure of the depth to the reflecting layers. Each seismic party in the field requires 15 to 25 men, including geophysicists, technicians and assistants, and the fact that there are currently about 120 parties operating in the four western provinces indicates the scale of the operation.

Certain developments in technique have been made to meet problems peculiar to Canada. In the northern muskeg regions, transportation is a difficulty, and winter operations are often carried on with the instruments mounted on snowmobiles. The tide of exploration has been moving steadily into the Rocky Mountain foothills where the faulted and folded beds have posed new problems in the interpretation of the records. The high cost of seismic exploration has encouraged the use of the gravimeter and airborne magnetometer as reconnaissance instruments. Gravitational and magnetic indications are less direct as most of them arise from conditions within the crystalline rocks beneath the oil-bearing sedimentary formations; but they may point out interesting areas for detailed seismic investigation.

In exploration for minerals a great variety of techniques have been used, depending on the various physical properties by which ores differ from their surroundings. At present interest is perhaps greatest in the airborne magnetometer, certain airborne radiation detectors, and in electromagnetic methods. The recording from the air of small changes in the earth's magnetic field has led to such important recent discoveries as the magnetic iron ore at Marmora, Ont., and the base metal ores, associated with magnetic minerals, near Bathurst, N.B. Similarly, large areas are being investigated for radioactive deposits by means of airborne counters. Because many ore minerals are good electrical conductors they may be located by electromagnetic techniques, in which electric currents are induced in subsurface conductors by primary alternating magnetic fields on the surface. Recent improvements in the method, including the use of a wide range of frequencies for the primary field, have led to such discoveries as the extensions of the Gaspé copper deposits.

Gravitational methods also play a role in exploration for minerals and have the advantage that of all geophysical methods the indications are most closely related to the all important mass or tonnage of the bodies producing them.

ASTRONOMY IN CANADA*

The modern era of astronomy in Canada may be said to have begun in 1905 with the completion of the Dominion Observatory, the national observatory of Canada. Prior to then an astronomical observatory established in 1851 at Fredericton, N.B. was used for a short time to determine the longitude of that centre and for general astronomical purposes; it has recently been rehabilitated as a historic monument. Other small observatories were established, one at Quebec city in 1854 and one at Kingston in 1875. Astronomical instruments were to be associated with the Magnetic Observatory built by the British Government at Toronto in 1839 but there is no record of them being set up until 1881. A small observatory set up at McGill University in 1879 was used for many years for time observations.

Today the science of astrophysics is carried on mainly by three Canadian institutions: the Dominion Observatory at Ottawa, Ont., the Dominion Astrophysical Observatory at Victoria, B.C., both of which are administered by the Department of Mines and Technical Surveys, and the David Dunlap Observatory associated with the University of Toronto. Of the two Government institutions, the Dominion Observatory at Ottawa specializes mainly in the astronomy of position, in solar physics and in various branches of geophysical work, while the major effort in astrophysics is concentrated at the Dominion Astrophysical Observatory at Victoria. The David Dunlap Observatory, founded in 1935, is equipped with very fine astrophysical instruments of a kind similar to those in use at Victoria. It performs not only the functions of a privately financed and administered research institution but is also the nucleus of the Department of Astronomy at Toronto University. In addition to the work of these three major institutions and a number of smaller observatories, investigations in the field of radio astronomy are conducted by the National Research Council.

THE DOMINION OBSERVATORY

The Dominion Observatory had its origin in the survey activities of the Government and the immediate occasion for its construction in 1905 was the great increase in astronomical work required by the survey of railway lands donated by the Province of British Columbia to ensure the construction of the Canadian Pacific Railway. In its early years the Dominion Observatory was intimately associated with geodetic surveying but since 1916 work of that type has been done by another branch of government. The present work of the Dominion Observatory is summarized in the following paragraphs.

* Prepared by Dr. C. S. Beals, Dominion Astronomer, Ottawa, Dr. J. F. Heard, Director David Dunlap Observatory, Toronto, and A. E. Covington, Division of Radio and Electrical Engineering, National Research Council, Ottawa.

Astronomy of Position.—Although the determination of the positions and motions of the stars is less spectacular than some other aspects of astronomical observation, such determinations nevertheless constitute the foundation on which the science of astronomy is based. All studies of the periods, distances and masses of members of the solar system depend on astronomical measurements of position and studies of the structure of the galaxy and the character of external galaxies are also closely bound up with measurements of the precise positions of stars. Work at Ottawa on stellar positions is carried out with a meridian circle telescope which was first put into operation in 1907. A "transit" instrument of this type is mounted on fixed pivots in such a way as to observe stars as they cross the meridian, or north-south circle in the sky. The actual quantities observed are the time of crossing the meridian and the declination or angular distance of the star above the equator.

Since its erection the Ottawa meridian circle telescope has been used to derive the positions of approximately 10,000 stars as well as to make many observations of members of the solar system. These observations are published not only as Canadian catalogues but are also incorporated in star lists used throughout the world for air and marine navigation, for surveying and for the determination of accurate time. The original Ottawa meridian circle telescope is still in operation, but plans are now under way to replace it with a new instrument of reflecting type and larger light-gathering power which is expected to reach stars of much fainter magnitude.

For time determinations at Ottawa, the meridian circle was used at first but was later replaced by a smaller reversible transit instrument. Though such observations were sufficiently accurate for the great majority of uses to which time is put, the need was felt for greater precision and in 1952 an entirely new type of instrument known as a photographic zenith telescope was put into operation for time observations. This instrument consists of a refracting telescope mounted in a vertical position with a mercury basin located about seven feet below the lens. The mercury surface reflects the light back on itself where it comes to a focus just below the telescope lens. Observations are made photographically and the accuracy obtained is very much greater than with previous instruments. This telescope has the advantage that it operates automatically and photographs are taken of successive stars as they cross the meridian at the zenith without the necessity of an observer being constantly present. Another feature of this instrument is the possibility of making very precise measurements of latitude. A constant check is kept of the latitude of Ottawa which is found to vary in a semi-regular manner with a period of about 14 months.

An important part of the Time Service is its clocks which are required to time astronomical observations and to interpolate between periods of observation. Until 1939 pendulum clocks were used, housed in vacuum cases and kept in constant temperature vaults to maintain accurate rates. The best pendulum clocks leave a great deal to be desired in accuracy however and, following 1939, quartz crystal clocks were gradually substituted. The vibrations of a suitably mounted and thermally controlled quartz crystal are very much more reliable than those of a pendulum and the Observatory now maintains a battery of five crystal clocks including one ring crystal of the type developed by the British Post Office. The best of these clocks show performances superior by a factor of 10 to the pendulum equipment and the average of several is sufficiently good to take full advantage of the increased accuracy of the photographic zenith telescope.

Another feature of the Time Service is distribution of seconds time signals by wire and radio throughout the country. Government buildings, commercial firms, telephone and telegraph companies and the two major railway systems are served by direct wire from the Observatory. The general public is served by the 1:00 p.m. signal on the CBC and the needs of aerial and marine navigators, surveyors and persons living in remote parts of the country are served by shortwave broadcasts of time signals. These broadcasts are in the frequencies 3,330, 7,335 and 14,670 kilocycles and include a voice announcement of the time every minute during the twenty-four hours of the day.

Stellar Physics.—A study of the physical characteristics of the sun and other heavenly bodies, including certain aspects of the earth itself, forms part of the astronomical program of the Dominion Observatory. The spectrum of the sun is studied by photographic means as well as by the use of photoelectric and photoconductive cells. These spectroscopic studies also give a considerable amount of information about the gaseous constituents of the earth's atmosphere through which the sun's radiation must pass. Additional information concerning the sun is obtained by means of frequent direct photographs through a red filter which admits only the light from its hydrogen atmosphere. These atmospheric photographs are especially valuable for the study of eruptions and variations in the sun's surface of a kind which may affect conditions on the earth.

Still another important means of studying the sun's atmosphere is by the observation of solar eclipses, rare events frequently interfered with by clouds. During an eclipse on June 30, 1954 spectroscopic studies of the sun's atmosphere were made by the Observatory with spectrographs mounted in an aircraft at a height of 27,000 feet. The effects of clouds were thus avoided and excellent spectra were obtained of that part of the sun's atmosphere projecting beyond the obscuring moon. These studies of the sun give a clearer understanding of its atmosphere and the source and characteristics of its radiation. Of particular interest are those changes, usually associated with sunspots, which cause auroras, magnetic storms, radio fadeouts and other disturbances in the earth's upper atmosphere.

In the field of meteoric astronomy, investigations of the motions of meteors or shooting stars give very valuable information concerning the upper atmosphere of the earth. In addition one of the major problems of astronomy is concerned with the origin and the relation to other members of the solar system of bodies that enter the earth's atmosphere to form bright meteors and if sufficiently massive, occasionally fall to the earth's surface. Regular visual observations of meteors together with direct photographic and spectroscopic observations are carried on at Ottawa. At Meanook and Newbrook, Alta., two powerful astronomical cameras of the Schmidt type, set up 26 miles apart, are employed in the photographic triangulations of meteors. Measurements of the photographs, establishing the exact position and space velocity of the meteors and the deceleration produced by the earth's atmosphere, have an important application to problems of the ballistics of high velocity military projectiles in the upper atmosphere.

Another problem of meteoric astronomy is the character and origin of meteorite craters and their possible relationship to similar craters on the moon. Several Canadian craters are being actively investigated and one has been found which appears to be 400,000,000 years old. A mathematical investigation has been initiated aimed at making clear the character of the explosive forces generated when a meteorite of very large size strikes the earth and some progress has been made in explaining the shapes and dimensions of known terrestrial craters.

THE DOMINION ASTROPHYSICAL OBSERVATORY*

The function of the Dominion Astrophysical Observatory at Vancouver is to make and interpret observations of the stars and other celestial objects in order to contribute to the exploration of the dynamical and spatial nature of the universe, to determine the dimensions of the stars, and to elucidate their physical and chemical conditions and the amount and quality of their radiant energy. For these purposes observations are made with a powerful spectrograph attached to the 72 inch telescope. The starlight is analysed and photographed in the spectrograph so that measurements can be made of the complex radiations emitted by the stars. Another instrument, the photoelectric photometer, enables precise measurement to be made of the brightness of starlight in half a dozen colours.

Broadly speaking the work falls into two branches. To study the universe large numbers of stars are photographed and their speeds, luminosities and distribution in space measured. On the other hand studies of the nature of the stars as physical entities are carried out by making detailed analyses of the photographed spectra of a relatively small number of selected stars.

* A more detailed account is given in a special article appearing in the 1948-49 Year Book, pp. 63-71.

During the past thirty-five years a major effort has been made to measure the line-of-sight speeds of the stars. This is done by making precise and exacting measurements of the positions of the radiations upon the photographs of stellar spectra. The velocities of nearly 4,000 stars have been measured. More recently much attention has been given to the problem of the determination of the distances of the stars which have been measured for velocity. The methods developed for this task have given the distances and intrinsic brightness of nearly 2,000 stars. In the course of these researches much has been learned about the properties of the material in interstellar space, its composition, motions and distribution and its effect upon the transmitted starlight.

The material thus accumulated has permitted a description and study of the universe to a distance of about 5,000 light-years from the sun. The earth's sun is a typical star of the galaxy, known as the Milky Way system, a lens-shaped aggregation comprising probably some 40,000,000,000 stars with an equal mass of dust and gas scattered between them. This enormous galaxy is about 70,000 light-years in diameter and is rotating about its centre. The earth's sun, approximately 25,000 light-years distant from the galactic centre, requires over 200,000,000 years to make one revolution.

The Observatory has played a leading role in the discovery and study of close double stars. These are systems of two stars in rapid revolution about their centre of gravity and so close to one another that they cannot be seen as two separate stars but must be studied with the spectroscope by means of which calculations are made of the sizes, masses, mean densities and energy output of the two stars. Double-star astronomy is essential to an understanding of the stars for (apart from the sun) it is almost the only source of information on the masses and dimensions of these objects which are of such importance to studies of the universe. Moreover these observations of double stars demonstrate the applicability of the law of gravitation throughout the stellar system as well as in the vicinity of the earth and sun.

The Observatory also carries out investigations into the physical and chemical nature of the stars by making detailed measures of the relative amounts of energy at various wavelengths in the emitted starlight. Thus information is obtained on the chemical composition of the stars and the relative abundance of chemical elements in the universe, as well as on the temperatures and pressures prevailing in stellar atmospheres and the motions and forces involved in the interaction of matter and radiant energy. The stars studied range from the very hot objects where matter is reduced to a relatively simple state, to the cool stars in whose atmospheres chemical compounds are able to exist.

The Observatory's spectroscopic analyses are of interest apart from astrophysics. They allow the study of atoms under conditions not yet produced in terrestrial laboratories and in the presence of a field of radiant energy not attainable on earth. The information from these astrophysical studies advances the knowledge of terrestrial physics and chemistry and the understanding of atoms and atomic processes.

THE DAVID DUNLAP OBSERVATORY

Professor C. A. Chant pioneered in the teaching of astronomy in Canada. He joined the staff of the Department of Physics at the University of Toronto in 1891 and, being interested in astronomy and particularly in the then new subject of astrophysics, energetically strove to improve the position of astronomy at the University. In 1904 his efforts were rewarded by the establishment of a graduate course entitled 'Physics and Astrophysics', and Dr. Chant was appointed head of a newly created sub-department of Astrophysics. This later became the Department of Astronomy with Dr. R. K. Young as assistant. During these years most of the professional astronomers in Canada received their training in Dr. Chant's Department and he felt increasing need for an observatory for astronomical research to aid in this training. The David Dunlap Observatory was the outcome of his tireless efforts to fill this need.

In 1930 Jessie Donalda Dunlap offered to build and donate to the University an observatory to be named in memory of her deceased husband, David Alexander Dunlap, who himself had been interested in Dr. Chant's proposal. The site chosen was to the immediate south of Richmond Hill, Ont., about ten miles north of Toronto. Work was begun in 1932 and the Observatory was completed and opened in 1935.

The David Dunlap Observatory was designed primarily for astrophysical research. The principal telescope, housed in a 61 foot dome, is a reflector of 74 inch aperture equipped with both Newtonian secondary for direct photography and Cassegrain secondary for use with a one-prism spectrograph. Separate from the dome for the 74 inch telescope is the Administration Building which contains library, offices, laboratories and workshops and which supports three domes. One of these houses a 19 inch reflecting telescope designed and built by Dr. R. K. Young. This telescope is used for direct photography and more recently for photoelectric photometry. A second dome on the Administration Building houses a six inch refracting telescope for student use; the third is vacant. Measuring instruments of various types for studying the astronomical photographs complete the scientific equipment of the Observatory.

Stellar Radial Velocities.—As regards the real motions of the stars, which reveal the over-all dynamics of the stellar system, classical astronomy had had to be content with that part of the motion which is directed across the line of sight and which is manifested by slight changes of position of the stars relative to one another. About eighty years ago it began to be possible by means of astronomical spectroscopy to measure also the radial or line-of-sight component of stellar motion. These stellar radial velocities as they became available for statistically large numbers of stars in the early part of this century revealed much new information concerning the structure of the galaxy. It was this field of radial velocity determination which was chosen for the major effort of the 74 inch telescope during the Observatory's early years. In twenty years about 2,500 stars have been measured for radial velocity out of a total of about 15,000 for which radial velocities are now known.

Stellar Photometry.—Another measurable attribute of stars which has always been of the greatest importance to the study of stars and star systems has been their apparent brightness. In particular this is true for stars of variable brightness. Some classes of these variable stars hold the clue for the determination of distances in the outer parts of the galaxy, particularly of the globular clusters. A twenty year program of photographic photometry of faint variable stars in many of the globular clusters has occupied about 5 p.c. of the observing time of the 74 inch telescope and has added appreciably to knowledge of these clusters. More recently photoelectric photometry, using electronic equipment fitted to the 19 inch telescope, has been added to the Observatory's observing program.

Stellar Luminosities.—Ranking in importance with measurement of apparent brightness of stars is the measurement of the luminosity or intrinsic brightness for, if both can be measured for the same star, then the star's distance may be calculated. Methods are available for gauging stellar luminosities from spectra of the stars and in recent years have been adapted to the collection of stellar spectra available at the Observatory from the radial velocity work. About 1,500 stars have now been measured for luminosity and new equipment and new methods are being developed to increase the precision of luminosity determination.

The foregoing brief outline of the work of the Observatory is intended to indicate only the major fields of observational activity. To this must be added detailed research problems of staff and students, which may be related to the observational data referred to, may be along purely theoretical lines, or may involve particular observational techniques designed to fit the problems. An effort is made to strike a balance between the production of routine astronomical measurements and the encouragement of individual enterprise and new methods of research.

In accordance with the wishes of the donor, the Observatory is open to the public on Wednesday afternoons throughout the year and for the first two hours of darkness on Saturday evenings from Apr. 1 to Oct. 31.

RADIO ASTRONOMY AT THE NATIONAL RESEARCH COUNCIL*

Within the past decade the rapidly developing techniques of the radio laboratory have been used to further understanding of the universe in the sense of observational astronomy. The incorporation of the techniques of a new science within one of the oldest of sciences has arisen because both the light and the radio emission from a celestial object are electromagnetic disturbances which travel with the same velocity (186,000 miles per second) but have different wavelengths (or frequencies).

Solar Radio Astronomy.—In 1946 the Radio and Electrical Engineering Division of the National Research Council commenced investigations on the emission of radio waves from the sun on a wavelength of 10.7 centimetres. The techniques and equipment which had been designed for radar sets in the Division were modified for use in this new field. The initial work was carried out at the Metcalfe Road Field Station, Ont., but because considerable microwave radio interference was experienced at this station a new site was acquired in 1948 at Goth Hill in South Gloucester, Ont., located fourteen miles south of Ottawa and this is the present location of the solar noise observatory.

The Observatory is now operating two radio-telescopes which monitor the total emission from the sun: one is the original four-foot parabolic reflector which has been in service since 1946; the second is a recently installed reflector of ten-foot diameter. A third radio-telescope, a 150-foot-long array, has been used to give directional information of radio waves from the sun, and is currently being modified in order to improve the resolving power.

The long series of regular observations of the sun at a wavelength of 10.7 centimetres, noted above, will be continued into the future. Comparison with optical observations made at other observatories has shown that there are three components of radio noise: an emission originating from the undisturbed solar atmosphere, an emission varying slowly from day to day which originates from the vicinity of sunspots, and a somewhat rare impulsive component of short duration which is associated with the appearance of solar flares. These emissions have been shown to originate at a level associated with the solar chromosphere—the transition layer above the photosphere and below the corona. The continuous monitoring of the radio emission on this wavelength appears to provide convenient indices of solar activities and will be of use in the fields of ionospheric research, the solar origin of cosmic rays, auroral studies and magnetic storm analysis. In each of these fields special events on earth may be traced to the occurrence of a flare on the sun.

Meteor Radio Astronomy.—In 1947 the Division of Radio and Electrical Engineering together with the Dominion Observatory initiated a combined program of meteor research. A 33 Mc/s radar set was developed at the Metcalfe Road Field Station so that echoes from meteors passing through the upper atmosphere could be readily detected. Visual, photographic and spectrographic work was also conducted. One of the most important contributions of this program to astronomy has been the conclusion that few if any meteors down to the eighth magnitude can be of interstellar origin. A few determinations of the complete orbits of meteors have been made by triangulating points of the ionized meteor path from three independent radar stations and have yielded elliptical orbits.

* Prepared by A. E. Covington, Division of Radio and Electrical Engineering, National Research Council, Ottawa.

Recently a new Upper Atmosphere Research Section has been formed in the Radio and Electrical Engineering Division. The activities of this Section will include both meteor and auroral observations as well as the study of associated ionospheric problems. Meteor research in co-operation with the Dominion Observatory will be continued during certain selected periods of meteor showers.

SMALLER OBSERVATORIES

In addition to the major research institutions whose work is described above, smaller observatories for student instruction or for the benefit of the public are maintained by universities or astronomical societies at Victoria, B.C., Edmonton, Alta., Saskatoon and Regina, Sask., London, Ont., and Quebec and Montreal, Que. There are also many private individuals and small groups who possess telescopes or small observatories and who practise astronomy as a hobby. Some of them grind and polish their own telescope mirrors, often producing instruments of excellent optical quality, capable of making observations of professional standard. Contact between amateur and professional astronomers is made possible by common membership in the Royal Astronomical Society of Canada. This Society has a membership of approximately 2,000, maintains centres in most of the major cities of Canada and publishes a Journal devoted to the dissemination of astronomical knowledge.

PART I.—CONSTITUTION OF CANADA

The Canadian federal state was established by the British North America Act, 1867 which united the three British North American provinces of Canada, New Brunswick and Nova Scotia into one country, divided into four provinces, namely, Ontario, Quebec, New Brunswick and Nova Scotia. British Columbia entered the Union in 1871 and Prince Edward Island in 1873. The Province of Manitoba was created in 1870 and the Provinces of Saskatchewan and Alberta in 1905 out of portions of the territories formerly held by the Hudson's Bay Company and admitted to the Union in 1870. Newfoundland entered the Union in 1949. At present therefore Canada consists of ten provinces and the remaining territories known as the Yukon Territory and the Northwest Territories.

The British North America Act of 1867 divided both legislative and executive authority between the Government of Canada and the Provincial Legislatures. Judicial authority was not similarly divided, federal and provincial courts having jurisdiction with respect to both federal and provincial laws.

Although the British North America Act of 1867 together with its subsequent amendments is popularly regarded as the Constitution of Canada, it is not an exhaustive statement of the laws and rules by which Canada is governed. The Constitution of Canada in its broadest sense includes other statutes of the United Kingdom Parliament (e.g., the Statute of Westminster, 1931), statutes of the Parliament of Canada relating to such matters as the succession to the Throne, the demise of the Crown, the Governor General, the Senate, the House of Commons, electoral districts, elections, Royal Style and Titles, and also

¹ The area of Ontario was extended by the Ontario Boundaries Extension Act, 1912 (2 Geo. V, c. 40).

² Extended by Quebec Boundaries Extension Act, 1912 (2 Geo. V, c. 45) and diminished Mar. 1, 1927 in consequence of the Award of the Judicial Committee of the British Privy Council whereby approximately 112,000 sq. miles of territory (formerly considered as part of Quebec) was assigned to Newfoundland.

³ Extended by the Extension of Boundaries Act of Manitoba, 1881 and the Manitoba Boundaries Extension Act, 1912 (2 Geo. V, c. 32).

⁴ Saskatchewan and Alberta created as provinces in 1905 from the area formerly comprised in the provisional Districts of Assiniboia, Athabasca, Alberta and Saskatchewan established May 17, 1882 by minute of Canadian Privy Council concurred in by Dominion Parliament and Order in Council, Oct. 2, 1895.

⁵ By an Imperial Order in Council passed on June 23, 1870 pursuant to the Rupert's Land Act, 1868 (31-32 Vict., c. 105) the former territories of the Hudson's Bay Company known as Rupert's Land and the North-Western Territory were transferred to Canada effective July 15, 1870. These territories were designated as the North-West Territories by the Act of 32-33 Vict., c. 3 and as the Northwest Territories by R.S.C. 1906, c. 62. By Imperial Order in Council of July 31, 1880 (effective Sept. 1, 1880) all British territories and possessions in North America not already included within Canada and all islands adjacent thereto (with the exception of the Colony of Newfoundland and its dependencies) were annexed to Canada and these additional territories were formally included in the North-West Territories by 4-5 Edw. VII, c. 27. The Province of Manitoba was formed out of a portion of the territories by the Manitoba Act, 1870 (33 Vict., c. 3) and a further portion was added to Manitoba in 1881 by 44 Vict., c. 14. The Provinces of Alberta and Saskatchewan were formed out of portions of the territories in 1905 and in 1912 other portions were added to Manitoba, Ontario and Quebec.

⁶ By 39 Vict., c. 21, a separate district to be known as the District of Keewatin was established and provision was made for the local government thereof. The Act was expressed to come into force by proclamation. It provided that portions of the District might be re-annexed to the North-West Territories by proclamation; in 1886 a portion of the District of Keewatin was re-annexed and in 1905 the entire Keewatin District was re-annexed. The Act of 39 Vict. was never proclaimed. By Order in Council of May 8, 1882 the provisional districts of Assiniboia, Saskatchewan, Alberta and Athabasca were created for the convenience of settlers and for postal purposes. By Order in Council of Oct. 2, 1895 the further provisional districts of Ungava, Franklin, Mackenzie and Yukon were created. The boundaries of these provisional districts were re-defined by Order in Council of Dec. 13, 1897. Subsequently the Yukon Territory was formed, the Provinces of Alberta and Saskatchewan were created and other portions of the territories were annexed to Quebec, Ontario and Manitoba. By Order in Council, dated Mar. 16, 1918 (effective Jan. 1, 1920) the remaining portions of the Northwest Territories were divided into three provisional districts known as Mackenzie, Keewatin and Franklin.

⁷ The provisional district of Yukon established in 1895 was created a judicial district of the North-West Territories by proclamation issued pursuant to Sect. 51 of the North-West Territories Act (R.S.C. 1886, c. 50) on Aug. 16, 1897 and by the Yukon Territory Act (61 Vict., c. 6) was declared to be a separate Territory.

statutes of provincial legislatures relating to provincial government and provincial legislative assemblies. Other written instruments such as the Royal Proclamation of 1763, early instructions to Governors, letters patent creating the offices of Governors and Governors General, and Orders in Council passed pursuant to the British North America Act also form part of the Canadian constitutional system. In addition the Constitution of Canada includes well established usages and conventions. The preamble to the British North America Act states that it was the desire of the original provinces to be united "with a constitution similar in principle to that of the United Kingdom" and accordingly many of the usages and conventions of government that have been developed in the United Kingdom over the centuries are followed in Canada. For example the Cabinet system of responsible government as developed in the United Kingdom obtains in Canada although no mention thereof is made in the British North America Act.

No provision was made in the British North America Act, 1867 for amendment thereof by any legislative authority in Canada but both the Parliament of Canada and the provincial legislatures were given legislative jurisdiction with respect to some matters relating to government. Thus for example the Parliament of Canada was given jurisdiction with respect to the establishment of electoral districts and election laws and the privileges and immunities of members of the House of Commons and the Senate, and each provincial legislature was empowered to amend the constitution of the province except as regards the office of Lieutenant-Governor. By an amendment to the British North America Act passed in 1949 the authority of the Parliament of Canada to legislate with respect to constitutional matters was considerably enlarged and it may now amend the Constitution of Canada except as regards the legislative authority of the provinces, the rights and privileges of provincial legislatures or governments, schools, the use of the English or the French language, and the duration of the House of Commons other than in time of real or apprehended war, invasion or insurrection.

Canada's Status in the Commonwealth of Nations.*—The several stages in the development of the status of Canada have been authoritatively described in the reports of successive Imperial Conferences including that held at London in 1926 which defined the group of self-governing communities consisting of the United Kingdom and the Dominions as "autonomous communities within the British Empire, equal in status, in no way subordinate one to another in any aspect of their domestic or external affairs, though united by a common allegiance to the Crown, and freely associated as members of the British Commonwealth of Nations". That Conference also recognized that as a consequence of this equality of status the Governor General of a Dominion "is the representative of the Crown, holding in all essential respects the same position in relation to the administration of public affairs in the Dominion as is held by His Majesty the King in Great Britain", and that "it is the right of the Government of each Dominion to advise the Crown in all matters relating to its own affairs". Simultaneously with this change in the constitutional relationship between the several parts of the British Commonwealth of Nations there developed as a complementary aspect of nationhood the assumption by the several Dominions of further responsibilities and rights of sovereign States in their relations with other members of the community of nations. Membership in the League of Nations and more recently in the United Nations, the exercise of treaty-making powers and the establishment of separate diplomatic representation in a number of foreign countries have characterized this phase in the growth of Canada. More explicit recognition of the implications of the principles of equality of status was accorded in the Statute of Westminster of 1931 which provided for the removal of the remaining limitations on the legislative autonomy of the Commonwealth nations.

Thus Canada, under the Crown, has equality of status with the United Kingdom and the other Commonwealth nations in both domestic and foreign affairs; its Government advises the Crown in the person of the Governor General on all matters relating to Canada. Canada has membership in the United Nations; makes its own treaties; appoints its

* For a more detailed account see 1952-53 Year Book, pp. 101-104.

own ambassadors and other representatives abroad; levies its own taxes; makes its own laws which are executed by a government dependent on the will of a majority of the people; and maintains its own military, naval and air forces. In short, Canada has achieved the full status of democratic nationhood within the Commonwealth of Nations.

PART II.—MACHINERY OF GOVERNMENT

Section 1.—The Federal Government

Subsection 1.—The Executive

The Crown.—The British North America Act provides that “the Executive Government and authority of and over Canada is . . . vested in the Queen”. The functions of the Crown, which are substantially the same as those of the Queen in relation to the Government of the United Kingdom, are discharged in Canada by the Governor General in accordance with established principles of responsible government. The practical executive functions of government are exercised by the Cabinet.

Apart from her constitutional position in relation to the various governments of the Commonwealth countries the Queen is Head of the Commonwealth and symbolizes the association of the member countries. Until 1953 the title of the Queen was the same throughout the Commonwealth. Constitutional developments put the title somewhat out of accord with the facts of the position and in December 1952 it was decided by the Prime Ministers of the Commonwealth countries meeting at London, Eng., that new forms of title for each country should be devised. The title for Canada was approved by Parliament and established by a Royal Proclamation on May 29, 1953. The title of the Queen, so far as Canada is concerned, now is:—

“Elizabeth the Second, by the grace of God of the United Kingdom, Canada and her other realms and territories Queen, Head of the Commonwealth, Defender of the Faith”.

The Governor General.—The Governor General, appointed by the Queen on the advice of the Prime Minister of Canada, traditionally serves for a term of five years. He exercises the executive authority of the Queen in relation to the Government of Canada under the Letters Patent constituting the Office of Governor General and the provisions of the British North America Acts, 1867 to 1952. Acting under the recommendations of his responsible advisers he summons, prorogues and dissolves Parliament and assents to Bills and exercises other executive functions.

2.—Governors General of Canada since Confederation, 1867

Name	Date of Appointment	Date of Assumption of Office
VISCOUNT MONCK, G.C.M.G.	June 1, 1867	July 1, 1867
LORD LISGAR, G.C.M.G.	Dec. 29, 1868	Feb. 2, 1869
The EARL OF DUFFERIN, K.P., K.C.B., G.C.M.G.	May 22, 1872	June 25, 1872
The MARQUIS OF LORNE, K.T., G.C.M.G.	Oct. 5, 1878	Nov. 25, 1878
The MARQUIS OF LANSDOWNE, G.C.M.G.	Aug. 18, 1883	Oct. 23, 1883
LORD STANLEY OF PRESTON, G.C.B.	May 1, 1888	June 11, 1888
The EARL OF ABERDEEN, K.T., G.C.M.G.	May 22, 1893	Sept. 18, 1893
The EARL OF MINTO, G.C.M.G.	July 30, 1898	Nov. 12, 1898
EARL GREY, G.C.M.G.	Sept. 26, 1904	Dec. 10, 1904
FIELD MARSHAL H.R.H. THE DUKE OF CONNAUGHT, K.G.	Mar. 21, 1911	Oct. 13, 1911
The DUKE OF DEVONSHIRE, K.G., G.C.M.G., G.C.V.O.	Aug. 19, 1916	Nov. 11, 1916
GENERAL THE LORD BYNG OF VIMY, G.C.B., G.C.M.G., M.V.O.	Aug. 2, 1921	Aug. 11, 1921
VISCOUNT WILLINGDON OF RATON, G.C.S.I., G.C.I.E., G.B.E.	Aug. 5, 1926	Oct. 2, 1926
The EARL OF BESSBOROUGH, G.C.M.G.	Feb. 9, 1931	Apr. 4, 1931
LORD TWEEDSMUIR OF ELSFIELD, G.C.M.G., G.C.V.O., C.H.	Aug. 10, 1935	Nov. 2, 1935
MAJOR-GENERAL THE EARL OF ATHLONE, K.G., P.C., G.C.B., G.C.M.G., G.C.V.O., D.S.O.	Apr. 3, 1940	June 21, 1940
FIELD MARSHAL VISCOUNT ALEXANDER OF TUNIS, K.G., G.C.B., G.C.M.G., C.S.I., D.S.O., M.C., A.D.C.	Aug. 1, 1945	Apr. 12, 1946
The Right Honourable VINCENT MASSEY, C.H.	Jan. 24, 1952	Feb. 28, 1952

The Cabinet.—The Cabinet is a committee of the Queen's Privy Council for Canada and is responsible to Parliament. By convention the members of the Cabinet are members of either the House of Commons or the Senate. Normally a Cabinet member has a seat in the House of Commons.

The Cabinet initiates nearly all public Bills placed before Parliament and following established precedent resigns office when it becomes evident that it no longer holds the confidence of the representatives of the people. Its members are chosen by the Prime Minister and each generally assumes charge of one of the various departments of government, although a Minister may hold more than one portfolio at the same time or may be without portfolio.

3.—Prime Ministers since Confederation, 1867

Ministry	Prime Minister	Length of Administration
1	Rt. Hon. Sir JOHN ALEXANDER MACDONALD.....	July 1, 1867 - Nov. 5, 1873
2	Hon. ALEXANDER MACKENZIE.....	Nov. 7, 1873 - Oct. 16, 1878
3	Rt. Hon. Sir JOHN ALEXANDER MACDONALD.....	Oct. 17, 1878 - June 6, 1891
4	Hon. Sir JOHN JOSEPH CALDWELL ARBOTT.....	June 16, 1891 - Nov. 24, 1892
5	Rt. Hon. Sir JOHN SPARROW DAVID THOMPSON.....	Dec. 5, 1892 - Dec. 12, 1894
6	Hon. Sir MACKENZIE BOWELL.....	Dec. 21, 1894 - Apr. 27, 1896
7	Hon. Sir CHARLES TUPPER.....	May 1, 1896 - July 8, 1896
8	Rt. Hon. Sir WILFRID LAURIER.....	July 11, 1896 - Oct. 6, 1911
9	Rt. Hon. Sir ROBERT LAIRD BORDEN.....	Oct. 10, 1911 - Oct. 12, 1917 (Conservative Administration)
10	Rt. Hon. Sir ROBERT LAIRD BORDEN.....	Oct. 12, 1917 - July 10, 1920 (Unionist Administration)
11	Rt. Hon. ARTHUR MEIGHEN.....	July 10, 1920 - Dec. 29, 1921 (Unionist—"National Liberal and Conservative Party")
12	Rt. Hon. WILLIAM LYON MACKENZIE KING.....	Dec. 29, 1921 - June 28, 1926
13	Rt. Hon. ARTHUR MEIGHEN.....	June 29, 1926 - Sept. 25, 1926
14	Rt. Hon. WILLIAM LYON MACKENZIE KING.....	Sept. 25, 1926 - Aug. 6, 1930
15	Rt. Hon. RICHARD BEDFORD BENNETT.....	Aug. 7, 1930 - Oct. 23, 1935
16	Rt. Hon. WILLIAM LYON MACKENZIE KING.....	Oct. 23, 1935 - Nov. 15, 1948
17	Rt. Hon. LOUIS STEPHEN ST. LAURENT.....	Nov. 15, 1948 - ...

4.—Members of the Seventeenth Ministry as at May 31, 1955

(According to precedence of Ministers)

NOTE.—A complete list of the members of Federal Ministries from Confederation to 1913 appears in the 1912 Year Book, pp. 422-429. Later Ministries will be found in subsequent editions of the Year Book.

Office	Occupant	Date of First Appointment ¹	Date of Appointment to Present Portfolio
Prime Minister and President of the Queen's Privy Council for Canada.....	Rt. Hon. LOUIS STEPHEN ST. LAURENT.....	Dec. 10, 1941	Nov. 15, 1948
Minister of Trade and Commerce and Minister of Defence Production.....	Rt. Hon. C. D. HOWE.....	Oct. 23, 1935	(Jan. 19, 1948 Mar. 22, 1951)
Minister of Agriculture.....	Rt. Hon. J. G. GARDINER.....	Oct. 28, 1935	Oct. 28, 1935
Minister of National Health and Welfare.....	Hon. PAUL MARTIN.....	Apr. 18, 1945	Dec. 12, 1946
Minister of National Revenue.....	Hon. J. J. MCCANN.....	Apr. 18, 1945	Apr. 18, 1945
Minister of Labour.....	Hon. M. F. GREGG.....	Jan. 19, 1948	Aug. 7, 1950
Secretary of State for External Affairs.....	Hon. L. B. PEARSON.....	Sept. 10, 1948	Sept. 10, 1948
Minister of Justice and Attorney General.....	Hon. S. S. GARSON.....	Nov. 15, 1948	Nov. 15, 1948
Minister of Veterans Affairs.....	Hon. ROBERT H. WINTERS.....	Nov. 15, 1948	Sept. 17, 1953
Minister of Public Works.....	Hon. HUGUES LAPOINTE.....	Aug. 24, 1949	Aug. 7, 1950
Minister of Finance and Receiver General.....	Hon. W. E. HARRIS.....	Jan. 18, 1950	July 1, 1954
Minister of Mines and Technical Surveys.....	Hon. GEORGE PRUDHAM.....	Dec. 13, 1950	Dec. 13, 1950
Postmaster General.....	Hon. ALcide Côté.....	Feb. 13, 1952	Feb. 13, 1952
Minister of Fisheries.....	Hon. JAMES SINCLAIR.....	Oct. 15, 1952	Sept. 17, 1953
Minister of National Defence.....	Hon. RALPH O. CAMPNEY.....	Oct. 15, 1952	July 1, 1954
Leader of the Government in the Senate and Solicitor General.....	Hon. WILLIAM R. MACDONALD.....	May 12, 1953	(May 12, 1953 Jan. 12, 1954)

Minister of Northern Affairs and National Resources.....	Hon. JEAN LESAGE.....	Sept. 17, 1953	Sept. 17, 1953
Minister of Transport.....	Hon. GEORGE C. MARLER.....	July 1, 1954	July 1, 1954
Secretary of State of Canada.....	Hon. ROCH PINARD.....	July 1, 1954	July 1, 1954

¹ Appointee was not necessarily sworn in on date given.

Administrative duties in the various departments of government became so burdensome during World War II that Parliamentary Assistants were appointed to assist six Cabinet Ministers with their parliamentary duties. The practice was extended after the War and at May 31, 1955 there were 11 Parliamentary Assistants, as follows:—

To Prime Minister.....	W. G. WEIR
To Minister of Agriculture.....	ROBERT MCCURRIN
To Minister of Fisheries.....	J. WATSON MACNAUGHT
To Minister of Veterans Affairs.....	C. E. BENNETT
To Minister of National Defence.....	J. A. BLANCHETTE
To Minister of Transport.....	L. LANGLOIS
To Postmaster General.....	T. A. M. KIRK
To Minister of Finance.....	W. M. BENEDICKSON
To Minister of National Health and Welfare.....	F. G. ROBERTSON
To Minister of Defence Production.....	JOHN H. DICKEY
To Minister of Public Works.....	M. BOURGET

The Privy Council.—The Queen's Privy Council for Canada is composed of about seventy members who are sworn of the Council by the Governor General on the advice of the Prime Minister and who retain their membership for life. The Council consists chiefly of present and former Ministers of the Crown. It does not meet as a functioning body and its constitutional responsibilities as adviser to the Crown in respect to Canada are performed exclusively by the Ministers who constitute the Cabinet of the day.

5.—Members of the Queen's Privy Council for Canada According to Seniority Therein as at May 31, 1955

NOTE.—In this list the prefix "The Rt. Hon." indicates membership in the United Kingdom Privy Council. Clerk of the Privy Council and Secretary to the Cabinet, R. B. BRYCE; Assistant Clerk of the Privy Council, A. M. HILL.

Member ¹	Date When Sworn In	Member ¹	Date When Sworn In

¹ The ordinary legal limit of duration for each Parliament is five years.

² Duration of Parliament in

years, months and days. The life of a Parliament is counted from the date of return of election writs to the date of dissolution, both days inclusive (B.N.A. Act, Sect. 50).

³ Date of general election.

⁴ Writs returnable.

⁵ Dissolution of Parliament.

⁶ During the war years Parliament was kept in almost continuous session. When prorogation took place it was followed immediately by a new session. During long adjournments provision was made whereby the Speaker could reconvene Parliament before the date previously set for reassembly.

THE PRIVY COUNCIL OFFICE AND CABINET SECRETARIAT IN RELATION TO THE DEVELOPMENT OF CABINET GOVERNMENT*

The first members of the Queen's Privy Council for Canada were sworn in at Ottawa by the Governor General, Viscount Munk, on Monday, July 1, 1867. They took in addition the oaths of office as heads of the various departments of government to which they had been named. At the same time a Clerk of the Privy Council was appointed and duly sworn.

By these formal steps the Central Executive of the new Dominion of Canada came into being. The second meeting of the Governor General in Council was held on the succeeding day, July 2, when among other things a report of "a Committee of Council" recommending provision for ordinary expenditures and constitution of the Treasury Board was submitted and approved.

The new Executive could call on a staff with considerable experience in this field of government. The new Clerk of the Privy Council, who had been Clerk of the Executive Council of the Province of Canada, had twenty-six years' service and his assistant had been with him for fourteen years. Moreover this staff was already installed in office quarters, in the Eastern Block of the Departmental Buildings at the new provincial capital of Ottawa, which they occupied in February 1865, and the Executive Council had met there

* Prepared by W. E. D. Halliday, Registrar of the Cabinet.

regularly in what was now to become the Privy Council Chamber. Authority for the continuance of this office, although under a new name, is to be found under the general provision for continuance of duties in Sect. 130 of the British North America Act.

With this continuity of administration it is understandable that the procedures followed and the form of the instruments used in the new Privy Council Office would be similar to Executive Council Office practice. The use of the Order in Council and the Minute of Council continued in a form almost identical with that drafted prior to Confederation.

The Central Executive in Canada actually is of a dual form. On the one hand there is the Queen's Privy Council (with the Prime Minister as President of the Council) functioning as a committee made up of those Privy Counsellors who are members of the administration of the day, and on the other there is the Cabinet, headed by the Prime Minister and composed of Ministers of the Crown. The Committee of Council and the Cabinet have always had identical membership and may be considered as two aspects of the same constitutional organism.

The evolution of Cabinet government in Great Britain began more than a century before Confederation. A vital principle was the withdrawal of the Sovereign from an active part in government and the making of executive decisions by a body of Ministers of the Crown who had the confidence of the House of Commons and who accepted entire responsibility for acts done in the name of the Crown.

In Canada the Cabinet system developed in general along lines similar to those in Great Britain but of course much later in time. It was a natural corollary of the struggle for responsible government. Although basically similar to British practice, it acquired a distinctive Canadian character. Such matters as size and geographical or sectional representation have contributed to this. The stages of withdrawal of the Sovereign from active government were reflected in Canada in similar changes in the position of the Sovereign's representative.

The beginnings of Cabinet government in Canada, as known today, were not very evident before the late 1840's. The Act of Union of the two Canadas, proclaimed in 1841, provided for an elected Legislative Assembly and an appointed Legislative Council. Executive authority was vested in the Governor General who was provided with an Executive Council whom he appointed. Lord Sydenham, the first incumbent after Union, introduced what might be called 'ministerial government' by grouping administrative agencies into departments, each under a Minister whom he chose from the Legislative Assembly and appointed to his Executive Council, therefore in effect making the Ministers responsible both to the Assembly and to himself. It has been said that he combined together the duties of Governor General, Prime Minister and Party Leader. He presided over meetings of Council and felt free to ignore advice from either Council or Assembly. Even when the principle of responsible government had been accepted in 1847 Lord Elgin, the Governor General, attended meetings of Council and took an active part in the deliberations.

By 1858 there had been significant developments and true Cabinet government was emerging. Sir Edmund W. Head, the then Governor General, in writing to the Colonial Secretary, expressed the view that the presence of the Governor as a regular and indispensable rule during discussions in Council "would check all freedom of debate and embarrass himself as well as his advisors". He indicated that it was a general rule for executive business to be carried on in the Council Chamber without the Governor General being present. The Council met as a committee under a President appointed by the Governor General to preside in his absence. Minutes arising from discussions, after being drawn up by the Clerk, were signed by the President and laid before the Governor General for signature of approval, either in the Council Chamber, the Governor's own rooms in the Council Office or at his home.*

* See "Cabinet Government in Canada", by J. R. Mallory, *Political Studies*, Vol. 11, No. 2, June 1954, a succinct article on Cabinet development; also the comprehensive study on Cabinet government by Norman McL. Rogers in the January, February and April 1933 issues of *The Canadian Bar Review*.

These conventions were applied after Confederation to the new Privy Council for Canada, and references to the Council functioning as a Cabinet became general. Furthermore membership in the Canadian Privy Council was made for life as in Great Britain, so that the executive now became the Committee of the Privy Council, in its formal and advisory aspect, and the Cabinet, in its informal, political and policy-making guise. Nevertheless there was no recognition of the changed state of affairs either in the British North America Act constituting the "executive power" or in the Commission and Instructions issued to the Governors General which still envisaged their presiding over meetings of the Privy Council and, under certain circumstances, dissenting with advice tendered.

Although in general these instructions were interpreted along the lines set out by Sir Edmund Head, there were differing views. The Earl of Dufferin, soon after his arrival in 1872, took up the question of attendance with John A. Macdonald, the then Prime Minister. He indicated that he had no wish to interfere with the administration and had noted the tendency "for the Governor General's council to transmute itself into the Prime Minister's cabinet". However he felt the right of the Governor General to preside over Council should not be allowed to fall into disuse,* and on several occasions he met with his Council.

During Lord Dufferin's term of office, consideration was given by the British Government to setting up permanent letters patent and instructions for governors of colonies. The draft submitted to Canada was severely objected to by the then Minister of Justice (Mr. E. Blake) as bearing no relation to the Dominion status of Canada, made up of federally united provinces with a constitution similar in principle to that of the United Kingdom. The Minister pointed out that all the incongruous provisions of the previous instruments were repeated and that the Governor General would be given an active voice in the executive government, a position long abandoned by the Sovereign in Great Britain. The substance of these protestations was accepted and the new instruments, which guided Lord Dufferin's successor, Lord Lorne, and subsequent Governors General, were suitably revised. This was an important step in self government as the effect was to recognize the extension of Cabinet government to Canada and to make the relation of the Governor General to the central executive analogous to that of the Sovereign to the British Cabinet.

The Minute of Council, assented to formally by the Governor General, was a convenient instrument at hand and was used for a variety of purposes. For many of these it was really an inappropriate instrument. As early as 1873 it was suggested to the Governor General by Mr. Macdonald, the Prime Minister, that Minutes of Council should be treated as the conclusions of the Cabinet and the Order form be only used for formal instruments adopted when the Governor General was present or supposed to be present. He still thought it necessary however at this early stage of evolution for the Minute to be submitted to the Governor General for his sanction as advice tendered by his responsible advisors. Nothing seems to have come of this and nearly seventy years passed before recorded Cabinet Conclusions came into use. Deliberations of Cabinet, as such, continued to be unrecorded unless the Cabinet resolved itself into Council where a policy decision required the passing of a Minute. The public emphasis was on meetings of Council, although the dual position was recognized by the omnibus term 'Cabinet-Council' which came into some use.

With the steady growth of Canada and consequent increase in public business, the desirability of distinguishing between the functions of the two forms of the Central Executive however became more and more evident.

As mentioned before, in earlier years the Minute of Council was used for a wide variety of purposes, many of which are now achieved by other means. For example, at one time despatches on external relations came from the Colonial Office in Great Britain through the Governor General and were referred to departments by the Privy Council; replies were agreed to by a Minute of Council and transmitted back through the Governor

* Rogers, *op. cit.*

General. As the country developed and international relations increased in number and complexity this system became inadequate and a separate department of External Affairs was set up in 1909. The practice of using a formal instrument like the Minute of Council for almost all the business of the executive was the subject of occasional comment from successive Governors General. Lord Stanley of Preston complained to the President of the Privy Council of the difficulties and delays of this practice and in 1910 Earl Grey wrote Sir Wilfrid Laurier, the Prime Minister, at some length, wondering at the continuation of a system which compelled Council to give a large portion of its time to considering a mass of business on small details of administration and at the quantity of Minutes, all signed by the President, which came to him daily for approval. He thought it should have been possible for routine matters of this nature to have been approved by the Minister responsible or, if the authority of the Governor General was legally required, then could not all such Minutes be bound under one covering Minute for signature.

The defects of a system which placed a heavy burden of detailed departmental work not only on Council but on Ministers individually and precluded them from giving full attention to the more important questions of national policy seems to have been recognized at Confederation. However the union of the Provinces posed other and more urgent problems so that generally the organization and methods used in the old Province of Canada were merely continued into the wider field of the Dominion. The continued expansion of this system with the growth of the country disclosed and aggravated its faults.*

In 1912, Sir George Murray was made a Commissioner to inquire into the organization of the Public Service of Canada. In his report he stated that nothing had impressed him so much as the almost intolerable burden the then system of transacting public business imposed on the Ministers themselves. He pointed out that almost all executive acts required the sanction of the Governor in Council, that there were large numbers of Orders (and Minutes) of Council with subject matters ranging from questions of the highest importance to matters of petty routine, that statutes continued to contain those requirements for collective responsibility for ministerial acts by approval of the Governor in Council which had been thought necessary safeguards in 1867 but by now were not required. He suggested as remedies that many powers then vested in the Governor in Council should be devolved on individual Ministers and, for this purpose, that a committee of Ministers review the duties discharged by Council and select those which could be safely left to the discretion of individual Ministers; moreover, that a distinction should be drawn between a meeting of the Cabinet and a meeting of Council so that matters of small intrinsic importance but which required formal sanction by the Governor in Council could be dealt with by a minimum quorum of Council, and Cabinet would be assisted thereby in performing its proper function of deciding questions of high policy. This report led to instructions to the Treasury Board by a Minute of Council in September 1913 to review the duties discharged by the Governor in Council and to report on those that might be left to the discretion of Ministers or a Committee of Ministers.

For several reasons no report materialized and the outbreak of World War I put aside further consideration of the whole question. However the War began to influence the organization of the executive in 1916, when three subcommittees of Council were established to deal with problems of censorship, labour and recruiting, and scientific and industrial research. When the Union Government was formed late in 1917, it was decided, in order to co-ordinate the war effort for maximum effect and also to distribute more evenly the burden on Ministers, to divide the Cabinet into two committees, the War Committee and the Reconstruction and Development Committee, the only members in common being the Prime Minister and the Minister of Finance. These committees had wide terms of reference and there was provision for the appointment of secretaries. Although

*See memorandum, Aug. 30, 1913, Adam Shortt to Sir Robert Borden, P.A.C. Borden Papers.

a secretary is known to have been appointed to the Committee on Reconstruction and Development in January 1918, no written records of the deliberations of these committees have survived except where, in view of the requirement that the committees report to Council, recommendations emerged as formal Minutes or Orders. Another innovation was the appointment in 1916 of two members of the House of Commons as, respectively, a Parliamentary Secretary to the Minister of Militia and Defence and a Parliamentary Under-Secretary of State for External Affairs. For a short time in 1918 there was also a Parliamentary Secretary for Soldiers' Civil Re-establishment.

These interesting developments in the machinery of the executive in Canada were no doubt influenced by what had taken place in this field in the United Kingdom during the War. There, various devices of the Cabinet committee nature, with advisory experts, had been used from soon after the War started. Records were frequently kept of decisions and they were communicated to the departments concerned. Some of these devices were not successful and when Mr. Lloyd George succeeded Mr. Asquith as Prime Minister, one of his first acts was to establish an entirely new type of body, a small War Cabinet made up of Ministers who, with one exception, had no departmental responsibility and were able to meet almost continually to make rapid decisions when necessary.

Another British innovation of pronounced and lasting effect provided the War Cabinet with a secretariat. In effect this was an extension of the secretariat for the Committee of Imperial Defence and for the War Committee of the early war years. Under the new Secretary to the Cabinet, agenda and documents were prepared and circulated, records kept of deliberations, decisions sent out for action, secretaries provided for committees and constant liaison kept with departments.

This organized approach to Cabinet business, so different from what had been the practice for many years, of private, informal meetings of the Cabinet without any written record except for a personal report by the Prime Minister to the Sovereign, proved its worth. With a return to the normal Cabinets of prewar days in 1919 the Secretariat was retained as it had become too valuable to discard—but not without some opposition from those accustomed to earlier practices—and is now a characteristic part of the British Cabinet system.

In Canada, although the prewar customs came back, thinking on reforms of the central executive evidently continued, influenced by United Kingdom practice and Canadian war experience. In 1919 a report of a special committee of the Senate on the Machinery of Government under the chairmanship of Senator McLennan stressed the need for reorganization of the Canadian Cabinet, particularly by a reduction in the number of Ministers and, to relieve the burden on Ministers so that they would have more time to deliberate as a policy making body, by providing them with Parliamentary Assistants and—as was then British practice—with a Cabinet Secretariat to expedite the carrying on of public business. The Secretary to the Cabinet would be responsible for such things as keeping what notes were desirable, for preparing and circulating agenda and information on items in advance and for communicating decisions to Ministers. It was also hoped that any revision of ministerial business would include the reform suggested by Sir George Murray, i.e., that a special and small committee of Ministers take over the passing of formal Orders in Council.

No firm steps were taken to put these recommendations into practice but Mr. W. L. Mackenzie King, then Prime Minister, tried out in peacetime the experiment of a Parliamentary Under-Secretary for a year in 1921-22. Later he had an item placed in the estimates of the Department of External Affairs to provide for a salary for a Secretary to the Prime Minister (he was also Secretary of State for External Affairs at the time). In speaking of it in the House of Commons in April 1927, Mr. King explained that it was an executive assistant he had in mind, filling a position corresponding to that of a deputy

minister and more or less to that of the Secretary to the Cabinet in Great Britain, and that he felt this assistant should be chosen by the Prime Minister and be outside the provisions of the Civil Service Act. The item was agreed to but with an amendment requiring any incumbent to retire with his Prime Minister unless the succeeding Prime Minister wished to retain him.

An actual appointment of this nature does not appear to have been made at the time but the pattern was taking form. In the latter half of the 1930's a growing complexity of government, important Commonwealth developments and a disturbed international situation all pointed to an increasing need for some of the procedural remedies suggested earlier. A subcommittee of the Privy Council was established in August 1936 called the Canadian Defence Committee, under the chairmanship of the Prime Minister. In 1938 Mr. King, in line with his proposals some ten years before, appointed Mr. A. D. P. Heeney as Principal Secretary in a Prime Minister's Office that had nearly doubled its staff during that period.

One of Mr. Heeney's duties was to act as Secretary to the Canadian Defence Committee which was generally known as the Defence Committee of the Cabinet. With the advent of World War II there was a proliferation of ministerial and other committees with the object of spreading the increased pressure of work on the Ministers and settling special problems in the most expeditious manner. Before hostilities started in 1939 several subcommittees of Council were established one of which, the Emergency Council, was designed as a supervisory body to the remainder and to view the war effort as a whole. It was composed of senior Ministers and took over the duties of the Defence Committee of prewar days. Mr. Heeney continued to act as Secretary, and minutes were kept. A few months later there was a substantial reorganization and the subcommittees of Council were replaced by committees of the Cabinet, a more appropriate description. Of these the War Committee was the principal one, replacing the Emergency Council. It consisted of a small number of Ministers selected by the Prime Minister because of various qualifications for the effective control and co-ordination of the war effort.

An account in some detail of the whole war organization of the Government including this system of committees and their functions was given to the House of Commons by the Prime Minister, Mr. King, on July 8, 1940.

The development of committees with a consequent need for Agenda, Minutes and Circulated Conclusions made the provision of secretarial assistance imperative. It was considered most suitable to associate this work with the Privy Council Office and in May 1940 when Mr. Heeney was appointed to the position of Clerk of the Privy Council he was also made the first Secretary to the Cabinet.

This extension of the duties of the Clerk of the Privy Council was in effect a recognition of the dual nature of the central executive in Canada. The functional difference between Cabinet and Council has not always been clearly recognized and the terms are commonly combined or used as synonyms. The difference however is significant and is pointed up by the ever increasing complexity of the problems facing the Government. Briefly, Council is the body established by statute for the purpose of tendering advice to the Crown which, when approved, emerges as a formal instrument, the Order or Minute of Council, having full force and effect in law. Cabinet on the other hand is a body having no legal standing but deriving its authority and functions from unwritten conventions and practice. It is concerned with making policy decisions, which may require submission to Council to implement and the issue of a formal instrument. Implementation often takes other forms however such as a statement in the House of Commons, a Cabinet directive to departments, a communication to foreign governments, the introduction of legislation in Parliament and so on.

The duties of the new Secretary to the Cabinet are set out in the appointing Order in Council as:—

- (a) the preparation for the approval of the Prime Minister of such agenda for Cabinet meetings as may be required;
- (b) the keeping of such notes of Cabinet meetings and conclusions thereof as may be required;
- (c) the preparation and submission to members of the Cabinet in advance, of such information as may be necessary for its deliberation;
- (d) the communication to Ministers, departments and others concerned of the decisions of the Cabinet;
- (e) the maintenance of liaison between the Cabinet and Committees thereof; and
- (f) such other duties as may from time to time be assigned to him by the Governor in Council.

Here was an important step in the development of Cabinet government in Canada encouraged, of course, by the pressures of wartime. It led to the gradual adoption of procedures along the lines of several of the recommendations of the Murray and McLennan reports and also to a clearer understanding of the proper functions of the Cabinet as a policy making and executive body as distinct from those of the Governor General in Council, concerned with the formal implementation of advice tendered to the Crown. The course taken paralleled what had happened already in the United Kingdom and procedurally owed much to British experience. At the same time its evolution was along distinctive lines in keeping with Canadian conditions and conventions.

Another wartime implementation of earlier recommendations was the appointment of Parliamentary Assistants to various Ministers for the first time in 1943—a practice that has persisted throughout the postwar years.

For some years, the work of the new Secretary to the Cabinet was concerned principally with the Cabinet War Committee which met one or more times a week and was the most active and important of the various ministerial committees. Regular procedures developed for recording discussion and decisions. Agenda were circulated before meetings together with explanatory memoranda identified by document numbers, decisions were communicated for action where required and a routine follow-up on this made with departments.

To assist the Secretary in this new and businesslike approach a small addition was made to the Privy Council Office staff and as the volume of committee work increased there was a modest enlargement. These additions included officers on loan from both civil and military departments and temporary appointees from outside the public service and the group became known as the Cabinet Secretariat. In addition to working for ministerial committees, the group provided secretaries for a number of related inter-departmental committees. A small map room was organized and operational summaries provided for the information of the War Committee. The Secretary of the Chiefs of Staff Committee later became a member of the Secretariat. When joint defence projects with the United States in the northwest made it advisable to appoint a special commissioner in the area he was also associated with the Secretariat, as was the special military adviser to the Prime Minister.

The small organization of the war years served a useful purpose and in the transition years to peacetime conditions there was no question of its abolition. After the demise of the Cabinet War Committee in 1945 the secretarial procedures that had been developed about it were applied regularly to meetings of the Cabinet, as well as to existing and new Cabinet committees. Conclusions were recorded, a new series of Cabinet documents started and decisions communicated for action.*

As time went on there were of course some changes. For instance the Secretariat of the Chiefs of Staff Committee moved back to National Defence when a full time chairman of the committee was appointed, the establishment of the Privy Council Office was re-organized

* For an authoritative and detailed account of the war and transition periods see "Cabinet Government in Canada; some recent developments in the Central Executive", by A. D. P. Heeney, *Canadian Journal of Economics and Political Science*, Vol. 12, No. 3, August 1946.

and grades of Privy Council officers instituted. In the interests of efficiency and economy certain administrative functions in the Prime Minister's Office and the Privy Council Office were combined and the two offices closely integrated. Changes were also made in the form of the Conclusions and a system of appropriately classified individual records of decisions requiring action was instituted to assist the departments in carrying out these decisions.

Mr. Heeney, after nine successful years of organizing, developing and directing his offices through the war, transition and postwar periods, left in March 1949 to become the Under Secretary of State for External Affairs. He was succeeded by Mr. Norman Robertson, the Canadian High Commissioner in London. In 1952 Mr. Robertson returned to London and his place was taken by Mr. J. W. Pickersgill, then Special Adviser to the Prime Minister. In June 1953 Mr. Pickersgill was sworn in to the Administration as Secretary of State and in September of that year Mr. R. B. Bryce, who was then the Secretary to the Treasury Board, was designated Clerk of the Privy Council and Secretary to the Cabinet effective Jan. 1, 1954.

For administration purposes, the Privy Council Office is regarded as a Department of Government under the Prime Minister, as President of the Privy Council. The Clerk of the Privy Council is considered as a deputy head and takes precedence as the first of the chief officers of the Public Service. As has been seen, in addition to the original duties of the office in connection with the Queen's Privy Council for Canada, new and specialized duties for the Cabinet have been added and there has been close integration also with the work of the Prime Minister's Office.

The advantages of an orderly approach in Cabinet business are obvious. Prior notice of items and adequate documentation help Ministers to deal efficiently and speedily with problems. Some idea is given of relative importance and discussion expedited. With the growing complexity of government business and increasing ministerial responsibilities, the value of a firm record of a decision, available for those who have to act on it, is self-evident.

In addition to the duties of the Secretary to the Cabinet and his staff in these matters there is another and by no means less important one; that is in co-ordination—in seeing that before a decision is taken the Prime Minister and Cabinet Ministers have all the relevant information, that when a decision concerns several departments its effects are understood and particularly that the financial implications are clearly known. In addition so far as possible agreement must be secured when there is a difference of opinion between departments so as to reduce the work falling on the Cabinet. All this means that there must be continual reference to and discussion with other deputies, heads of agencies, and officials. One commonly used device for obtaining this collective approach, particularly when dealing with matters on which the Cabinet asks for further examination and report, is the interdepartmental committee. This is sometimes associated with a Cabinet committee but quite often is of an ad hoc nature and reports directly to the Cabinet. The Privy Council Office usually provides secretaries for such committees and may be represented on them; at some meetings the Secretary to the Cabinet acts as chairman.

As regards the Privy Council work mention has been made of the former wide use of the formal Minute of Council for recording all kinds of government business. These Minutes are commonly classed with Orders but there is a difference. Both are the end results of formal advice to the Crown and are assented to by the Governor General. The Order however is normally employed when the Governor in Council acts under a specific statute or under the prerogative and orders that something be done. The Minute on the other hand is less formal and sets out the authority for something to be done such as for a Minister to enter into an agreement, for signing powers or for receipt of a report.

In time the use of the Minute became more restricted but such factors as the growing volume and scope of government work, the partiality of drafters of legislation to require the collective responsibility of the Governor General in Council for action under the statute, and restrictions on ministerial approval of contracts kept the volume of both

Orders and Minutes of Council ever on the increase. During the war years the number of these passed, including Treasury Board Minutes requiring approval of Council, was close to 15,000 a year. To cope with this volume all Orders and Minutes of a routine administrative nature were examined and cleared prior to a Council meeting by a special committee of Ministers called the Government Business Committee. After the War this practice was continued and extended with the establishment of a Special Committee of Council to dispose of formal business where policy had been settled. Matters calling for a policy decision are first referred to the Cabinet and, if approved, any necessary Order or Minute is disposed of, either at the time by the meeting resolving itself into the Committee of Council for that purpose or at a subsequent meeting of the Special Committee.

The introduction of a recorded Cabinet decision and its circulation for action tends to reduce the use of the formal Minute as it would have been considered necessary in the past to issue a Minute of Council for many of the decisions taken. However the enactment by Parliament in 1951 of the Financial Administration Act led to a substantial reduction in the routine functions of Council. Under this Act certain powers formerly exercised by the Governor in Council under the Civil Service Act, the Civil Service Superannuation Act, the Defence Services Pension Act and the Royal Canadian Mounted Police Act were delegated to the Treasury Board. In addition the Government Contracts Regulations of 1952 and the Regulations relating to the acquisition of lands by government departments, also made in that year, delegated to the Board and to the responsible Ministers the greater part of the powers of the Governor in Council relating to purchase, service and construction contracts, and the leasing and acquisition of lands for the Crown.

In keeping with the development of the work of Council as outlined above certain improvements have been made during the past ten years in bringing regulations and orders of general effect to the notice of all concerned. Prior to World War II, Regulations and Statutory Orders were published in the *Canada Gazette* as they were made. During the war years all War Orders and Regulations were published separately and in more convenient form. At the end of the War it was felt that this practice should be continued for all Regulations and Statutory Orders and, in January 1947, Part II of the *Canada Gazette* made its first appearance. In 1950 the Regulations Act was passed providing for the continued publication of Part II and for the promulgation therein under the supervision of the Clerk of the Privy Council of all Statutory Orders and Regulations. To make these even more accessible a consolidation of Statutory Orders and Regulations was published in 1949. A second consolidation was scheduled in 1955.

The developments outlined above aimed at improving and expediting the work of the Central Executive and clarifying the position of the Cabinet can be seen to have followed a fairly logical pattern. Although decades may have elapsed criticisms have been answered and considered recommendations have finally been put into effect. The development owes much to earlier British experience and practice. What has resulted has a character essentially Canadian, reflecting the federal nature of the Dominion, the sectional representation of the Cabinet and the peculiar position and functions of the Queen's Privy Council for Canada which, that of the United Kingdom excepted, is the only one of its kind within the British Commonwealth.

Subsection 2.—The Legislature

The federal legislative authority is vested in the Parliament of Canada consisting of the Queen, an Upper House styled the Senate, and the House of Commons. Bills may originate in either the Senate or the House subject to the provisions of Sect. 53 of the British North America Act, 1867 which provides that Bills for the appropriation of any part of the public revenue or the imposition of any tax or impost shall originate in the House of Commons. Bills must pass both Houses and receive Royal Assent before becoming law. In practice most Public Bills originate in the House of Commons although there has been a marked increase recently in the introduction of Public Bills in the Senate. Private Bills usually originate in the Senate. (See Chap. XXIX for current legislation.)

Under Sect. 91 of the British North America Acts, 1867-1952 the legislative authority of the Parliament of Canada extends to the following matters: the amendment of the Constitution of Canada (subject to certain exceptions); the public debt and property; the regulation of trade and commerce; unemployment insurance; the raising of money by any mode or system of taxation; the borrowing of money on the public credit; postal service; the Census and statistics; militia, military and naval service, and defence; the fixing of and providing for the salaries and allowances of civil and other officers of the Government of Canada; beacons, buoys, lighthouses and Sable Island; navigation and shipping; quarantine and the establishment and maintenance of marine hospitals; sea coast and inland fisheries; ferries between a province and any British or foreign country or between two provinces; currency and coinage, banking, incorporation of banks and the issue of paper money; savings banks, weights and measures; bills of exchange and promissory notes; interest; legal tender; bankruptcy and insolvency; patents of invention and discovery; copyrights; Indians and lands reserved for the Indians; naturalization and aliens; marriage and divorce; the criminal law, except the constitution of courts of criminal jurisdiction, but including the procedure in criminal matters; the establishment, maintenance and management of penitentiaries; such classes of subjects as are expressly excepted in the enumeration of the classes of subjects by these Acts assigned exclusively to the legislatures of the provinces.

Under Sect. 95 the Parliament of Canada may make laws in relation to agriculture and immigration concurrently with provincial legislatures although federal legislation is paramount in the event of conflict. By the British North America Act, 1951 (14-15 Geo. VI, c. 32) it was declared that the Parliament of Canada might make laws in relation to old age pensions in Canada but no such law shall affect the operation of any provincial laws in relation to old age pensions.

The Senate.—From an original membership of 72 at Confederation the Senate, through the addition of new provinces and the general growth of population, now has 102 members, the latest change in representation having been made on the admission of Newfoundland to Confederation in 1949. The growth of representation in the Senate is traced in the 1940 Year Book, pp. 47-49, and is summarized by provinces in Table 7.

The House of Commons.—The British North America Act, 1867 provided that in respect of representation in the House of Commons the Province of Quebec should have the fixed number of sixty-five members and that there should be assigned to each of the other provinces such a number of members as would bear the same proportion to the number of its population as the number sixty-five bears to the number of the population of Quebec. This Act also provided that on the completion of a census in 1871 and of each subsequent decennial census the representation of the several provinces should be readjusted from time to time provided the proportionate representation of the provinces as prescribed by the Act was not thereby disturbed.

In the session of 1946 the House of Commons adopted a resolution stating that the effect of the provisions of the British North America Act relating to representation had not been satisfactory in that proportionate representation of the provinces according to population had not been maintained and that a more equitable apportionment of members to the various provinces could be effected if readjustments were made on the basis of the population of all the provinces taken as a whole. The Act was amended accordingly in 1946 to provide a new rule to regulate representation in the House of Commons. Generally speaking, representation was fixed as follows:—

The membership assigned to each province shall be computed by dividing the total population of the provinces by two hundred and fifty-four and by dividing the population of each province by the quotient so obtained.

This rule, employed in the redistribution of representation made in 1947, was effective in the general election of 1949.

After the completion of the 1951 Census it was apparent that as a result of a wartime shift of population a substantial reduction in the representation of the Province of Saskatchewan would ensue under the rules then regulating representation. Accordingly in an effort to eliminate sharp reductions in provincial representation from one census to another the British North America Act was again amended to provide representation on the following basis:—

“Sect. 51.—(1) Subject as hereinafter provided, the number of members of the House of Commons shall be two hundred and sixty-three and the representation of the provinces therein shall forthwith upon the coming into force of this section and thereafter on the completion of each decennial census be readjusted by such authority, in such manner, and from such time as the Parliament of Canada from time to time provides, subject and according to the following rules:—

“1. There shall be assigned to each of the provinces a number of members computed by dividing the total population of the provinces by two hundred and sixty-one and by dividing the population of each province by the quotient so obtained, disregarding, except as hereinafter in this section provided, the remainder, if any, after the said process of division.

“2. If the total number of members assigned to all the provinces pursuant to rule one is less than two hundred and sixty-one, additional members shall be assigned to the provinces (one to a province) having remainders in the computation under rule one commencing with the province having the largest remainder and continuing with the other provinces in the order of the magnitude of their respective remainders until the total number of members assigned is two hundred and sixty-one.

“3. Notwithstanding anything in this section, if upon completion of a computation under rules one and two, the number of members to be assigned to a province is less than the number of senators representing the said province, rules one and two shall cease to apply in respect of the said province, and there shall be assigned to the said province a number of members equal to the said number of senators.

“4. In the event that rules one and two cease to apply in respect of a province then, for the purpose of computing the number of members to be assigned to the provinces in respect of which rules one and two continue to apply, the total population of the provinces shall be reduced by the number of the population of the province in respect of which rules one and two have ceased to apply and the number two hundred and sixty-one shall be reduced by the number of members assigned to such province pursuant to rule three.

"5. On any such readjustment the number of members for any province shall not be reduced by more than fifteen per cent below the representation to which such province was entitled under rules one to four of this subsection at the last preceding readjustment of the representation of that province, and there shall be no reduction in the representation of any province as a result of which that province would have a smaller number of members than any other province that according to the results of the then last decennial census did not have a larger population; but for the purposes of any subsequent readjustment of representation under this section any increase in the number of members of the House of Commons resulting from the application of this rule shall not be included in the divisor mentioned in rules one to four of this subsection.

"6. Such readjustment shall not take effect until the termination of the then existing Parliament.

"(2) The Yukon Territory as constituted by chapter forty-one of the Statutes of Canada, 1901, shall be entitled to one member, and such other part of Canada not comprised within a province as may from time to time be defined by the Parliament of Canada shall be entitled to one member." (R.S.C. 1952, c. 304.)

The principal effect of these new rules is that the representation of any province shall not be reduced by more than 15 p.c. at any one readjustment subject however to the qualification that the rule shall not work out in such manner that the representation of a province with a smaller population shall be greater than any province with a larger population.

Subsequently Parliament enacted a measure, "An Act to readjust the Representation in the House of Commons, 1952", effective in the general election of 1953, which provided that representation in the House of Commons shall be on the following basis:—

"Sect. 2.—Eighty-five members of the House of Commons shall be elected for the Province of Ontario, seventy-five for the Province of Quebec, twelve for the Province of Nova Scotia, ten for the Province of New Brunswick, fourteen for the Province of Manitoba, twenty-two for the Province of British Columbia, four for the Province of Prince Edward Island, seventeen for the Province of Saskatchewan, seventeen for the Province of Alberta, seven for the Province of Newfoundland, one for the Yukon Territory and one for Mackenzie district of the Northwest Territories, thus making a total of two hundred and sixty-five members." (R.S.C. 1952, c. 344.)

The number of representatives of each province elected at each of the 22 general elections since Confederation is given in Table 9.

¹ By-elections from May 31, 1955 to the date of going to press are included in Appendix I.

The Opposition.—The Opposition occupies an essential place in constitutions based on the British parliamentary system. Like many other institutions, such as that of the premiership for instance, it is founded on the unwritten customs that have been accepted and become firmly established.

The choice of the Canadian electorate not only determines who shall govern Canada but by deciding which party receives the second largest number of seats in the House of Commons it designates which of the major parties becomes the Official Opposition. The function of the Leader of the Opposition is to offer intelligent and constructive criticism of the Government of the day.

When criticism by the Opposition becomes sufficiently effective it can overthrow the existing Government and the Leader of the Opposition might then, as a result of the ensuing election or by forming a coalition without resorting to an election at the time, become Prime Minister.

Although the position of Leader of the Opposition is not recognized in the British North America Act it received statutory acknowledgment in Canada in 1927. The Senate and House of Commons Act of that year provided for an annual salary to be paid to the Leader of the Opposition in addition to his indemnity as a Member of the House.

Indemnities and Allowances.—Members of the Senate receive a sessional allowance at the rate of \$8,000 per annum. In addition they receive at the end of each calendar year an annual expense allowance of \$2,000 which is subject to income tax. Members of the House of Commons are paid a sessional allowance at the rate of \$8,000 per annum. In addition they receive \$2,000 as an expense allowance paid at the end of each calendar

year. This allowance, except that for Ministers of the Crown and for Leaders of the Opposition in the House and in the Senate, is not subject to income tax. The remuneration of the Prime Minister is \$25,000 a year and of a Cabinet Minister and the Leader of the Opposition \$15,000 a year in addition to the sessional allowance and expense allowance each receives as a Member of Parliament. A Cabinet Minister is also entitled to a motor car allowance of \$2,000. The Speakers of the Senate and of the House of Commons each receive, besides their sessional allowance and expense allowance, a salary of \$9,000 and a motor car allowance of \$1,000 and each is entitled to \$3,000 in lieu of a residence. The Deputy Speaker of the House of Commons receives a salary of \$6,000 and an allowance of \$1,500 in lieu of a residence. The Deputy Chairman of Committees receives an annual allowance of \$2,000. Parliamentary Assistants to the Ministers of the Crown receive \$8,000 sessional allowance as Members of Parliament, \$4,000 a year as Parliamentary Assistants and the \$2,000 expense allowance paid to all Members of Parliament.

The Federal Franchise.—The present federal franchise laws are contained in the Canada Elections Act (R.S.C. 1952, c. 23). The franchise is conferred upon all Canadian citizens or British subjects, men and women who have attained the age of 21 years and who have been ordinarily resident in Canada for 12 months prior to polling day at a federal election and ordinarily resident in the electoral district on the date of the issue of the writ ordering such election. Persons denied the right to vote are:—

- (1) Judges appointed by the Governor General in Council;
- (2) The returning officer for each electoral district;
- (3) Persons undergoing punishment as inmates of any penal institution for the commission of any offence;
- (4) Indians ordinarily resident on an Indian reserve who were not members of His Majesty's Forces in World Wars I or II or who did not execute a waiver of exemption under the Indian Act from taxation on and in respect of personal property;
- (5) Persons restrained of their liberty or deprived of the management of their property by reason of mental disease;
- (6) Persons disqualified under any law relating to the disqualification of electors for corrupt and illegal practices.

The Canadian Forces Voting Regulations set out in the Schedule to the Canada Elections Act prescribe voting procedure for members of the Armed Forces of Canada and also for veterans in receipt of treatment or domiciliary care in certain institutions.

³ Electoral District of Yukon.

⁴ Electoral District of Mackenzie River.

Subsection 3.—The Judiciary

The Federal Judiciary

The Parliament of Canada is empowered by Sect. 101 of the British North America Act to provide from time to time for the constitution, maintenance and organization of a general Court of Appeal for Canada and for the establishment of any additional courts for the better administration of the laws of Canada. Under this provision Parliament has established the Supreme Court of Canada, the Exchequer Court of Canada and certain miscellaneous courts.

Supreme Court of Canada.—This Court, first established in 1875 and now governed by the Supreme Court Act (R.S.C. 1952, c. 259), consists of a chief justice, who is called the Chief Justice of Canada, and eight puisne judges. The chief justice and the puisne judges are appointed by the Governor in Council and they hold office during good behaviour but are removable by the Governor General on address of the Senate and the House of Commons. They cease to hold office upon attaining the age of 75 years. The Court sits at Ottawa and exercises general appellate jurisdiction throughout Canada in civil and criminal cases. The Court is also required to consider and advise upon questions referred to it by the Governor in Council and it may also advise the Senate or the House of Commons on Private Bills referred to the Court under any rules or orders of the Senate or the House of Commons.

Appeals may be brought from any final judgment of the highest court of final resort in a province in any case where the amount or value of the matter in controversy exceeds the sum of \$2,000. An appeal may be brought from any other final judgment with leave of the highest court of final resort in the province; if such court refuses to grant leave the Supreme Court of Canada may grant leave to appeal. The Supreme Court may grant leave to appeal from any judgment whether final or not. Appeals in respect of indictable offences are regulated by the Criminal Code. Appeals from federal courts are regulated by the statute establishing such courts. The judgment of the Supreme Court of Canada in all cases is final and conclusive.

13.—Chief Justice and Judges of the Supreme Court of Canada as at May 31, 1955

(In order of seniority)

Name	Date of Appointment
The Hon. Chief Justice PATRICK KERWIN.....	July 1, 1954 ¹
The Hon. Justice ROBERT TASCHEREAU.....	Feb. 9, 1940
The Hon. Justice I. C. RAND.....	Apr. 22, 1943

The Hon. Justice J. H. GERALD FAUTEUX.....	Dec. 23, 1949
The Hon. Justice DOUGLAS CHARLES ABBOTT.....	July 1, 1954

¹ First appointed as a Judge of the Supreme Court, July 20, 1935.

Exchequer Court.—The Exchequer Court of Canada was first established in 1875 as part of the Supreme Court of Canada but is now a separate court governed by the Exchequer Court Act (R.S.C. 1952, c. 98). The Court consists of a president and four puisne judges who are appointed by the Governor in Council. The president and the puisne judges hold office during good behaviour but may be removed by the Governor General on address of the Senate and the House of Commons. They cease to hold office upon attaining the age of 75 years. The Court sits at Ottawa and also at any other place in Canada where sittings may be fixed by the Court. The jurisdiction of the Court extends to cases where claims are made by or against the Crown in right of Canada. Proceedings against the Crown are taken by petition of right pursuant to the Petition of Right Act (R.S.C. 1952, c. 210).

An appeal lies to the Supreme Court of Canada from any final judgment of the Exchequer Court in which the amount in controversy exceeds \$500; an appeal also lies with leave of the Supreme Court in certain cases where the amount in controversy does not exceed \$500 or where the judgment is not final.

The Exchequer Court also exercises admiralty jurisdiction in Canada. This was first conferred in 1891 by the Admiralty Act (54-55 Vict., c. 29) and is now governed by the Admiralty Act (R.S.C. 1952, c. 1). Under this Statute the Exchequer Court is continued as a Court of Admiralty. The president and puisne judges of the Exchequer Court exercise admiralty jurisdiction throughout the whole of Canada. In addition Canada is divided into various admiralty districts; a district judge in admiralty is appointed for each district. Appeals to the Supreme Court of Canada from judgments of the president or the puisne judges are governed by the general appeal provisions in the Exchequer Court Act. Appeals may be taken from a final judgment of a district judge in admiralty either to the Exchequer Court or direct to the Supreme Court of Canada.

Miscellaneous Courts.—*Railway Act.*—The Railway Act, 1903 (R.S.C. 1952, c. 234) established the Board of Railway Commissioners for Canada as a court of record; by the Transport Act, 1938 (R.S.C. 1952, c. 271) the name was changed to the Board of Transport Commissioners for Canada. This Court exercises jurisdiction with respect to railway matters. The Governor in Council is given jurisdiction to vary any order of the Board and an appeal lies from the Board to the Supreme Court of Canada upon a question of jurisdiction or a question of law.

Bankruptcy Act.—By virtue of Sect. 91, para. 21 of the British North America Act, 1867 Parliament has exclusive legislative jurisdiction in relation to bankruptcy and insolvency. By the Bankruptcy Act (R.S.C. 1952, c. 14) the superior courts of the provinces are constituted bankruptcy courts; original jurisdiction is conferred upon the trial courts and appellate jurisdiction is conferred upon the appeal courts of the provinces.

Farmers' Creditors Arrangement Act.—Under the Farmers' Creditors Arrangement Act (R.S.C. 1952, c. 111) the county or district courts of the provinces are established as courts for the purposes of this Act and the appeal courts of the provinces are given appellate jurisdiction.

Income Tax Appeal Board.—By the Income Tax Act (R.S.C. 1952, c. 148) an Appeal Board is established consisting of a chairman and not fewer than two or more than four members with jurisdiction over appeals against income tax assessments. A further appeal may be taken to the Exchequer Court.

Provincial Judiciaries*

Certain provisions of the British North America Act govern to some extent the provincial judiciaries. Under Sect. 92 (14) the legislature of each province exclusively may make laws in relation to the administration of justice in the province including the constitution, maintenance and organization of provincial courts both of civil and of criminal jurisdiction. Sect. 96 provides that the Governor General in Council shall appoint the judges of the superior, district, and county courts in each province except those of the courts of probate in Nova Scotia and New Brunswick. Sect. 100 provides that the salaries, allowances and pensions of judges of the superior, district and county courts (except the courts of probate in Nova Scotia and New Brunswick) are to be fixed and provided by the Parliament of Canada and these are set out in the Judges Act (R.S.C. 1952, c. 157). Under Sect. 99 the judges of the superior courts hold office during good behaviour but are removable by the Governor General on address of the Senate and House of Commons. The tenure of office of district and county court judges is fixed by the Judges Act as being during good behaviour and their residence within the county or union of counties for which the court is established.

* More detailed information concerning provincial judiciaries is given in the 1954 Year Book, pp. 48-55.

All provinces have minor courts with limited civil and criminal jurisdiction, the judges of which are appointed by provincial authority as for example Justices of the Peace, Magistrates and Juvenile Court Judges. Except in Quebec there are County or District Courts of each province with limited jurisdiction varying from \$500 to \$2,500 in amount. Each province has a superior court with virtually unlimited jurisdiction variously known as Court of Queen's Bench, Supreme Court, Superior Court, etc., and there is a Court of Appeal in each province.

Section 2.—Provincial and Territorial Governments*

In each of the provinces, the Queen is represented by a Lieutenant-Governor appointed by the Governor General in Council. The Lieutenant-Governor acts on the advice and with the assistance of his Ministry or Executive Council which is responsible to the Legislature and resigns office when it ceases to enjoy the confidence of that body.

The Legislature of each province is unicameral, consisting of the Lieutenant-Governor and a Legislative Assembly except for the Province of Quebec where there is a Legislative Council as well as a Legislative Assembly.

The Legislative Assembly is elected by the people for a statutory term of five years but may be dissolved within that period by the Lieutenant-Governor on the advice of the Premier of the province.

The source of legislative authority of the Provincial Legislatures is the British North America Act, 1867 (30-31 Vict., c. 3 and amendments). Under Sect. 92 of the Act the Legislature of each province exclusively may make laws in relation to the following matters: amendment of the constitution of the province except as regards the Lieutenant-Governor; direct taxation within the province; borrowing of money on the credit of the province; establishment and tenure of provincial offices and appointment and payment of provincial officers; the management and sale of public lands belonging to the province and of the timber and wood thereon; the establishment, maintenance and management of public and reformatory prisons in and for the province; the establishment, maintenance and management of hospitals, asylums, charities and eleemosynary institutions in and for the province, other than marine hospitals; municipal institutions in the province; shop, saloon, tavern, auctioneer and other licences issued for the raising of provincial or municipal revenue; local works and undertakings other than interprovincial or international lines of ships, railways, canals, telegraphs, etc., or works which though wholly situated within one province are declared by the Federal Parliament to be for the general advantage either of Canada or of two or more provinces; the incorporation of companies with provincial objects; the solemnization of marriage in the province; property and civil rights in the province; the administration of justice in the province including the constitution, maintenance and organization of provincial courts both of civil and of criminal jurisdiction including procedure in civil matters in these courts; the imposition of punishment by fine, penalty or imprisonment for enforcing any law of the province relating to any of the aforesaid subjects; generally all matters of a merely local or private nature in the province.

Further, in and for each province the Legislature exclusively may under Sect. 93 make laws in relation to education subject to certain restrictions relating to the establishment of schools by religious minorities. These powers with similar restrictions were conferred on the more recently admitted provinces on their inclusion as units in the federation.

The Provincial Legislatures may also make laws under Sect. 95 in relation to agriculture and immigration subject to any laws of the Parliament of Canada in relation to these subjects.

Provincial Franchise.—Details regarding qualifications and disqualifications of the franchise are contained in the Elections Act of each province. In general every person, male or female, at the age of 21 years, who is a Canadian citizen or a British subject, who

* The information given in Subsections 1 to 10 of this Section is brought up to May 31, 1955, except where otherwise indicated. Provincial elections held between the date shown in each case and the date of going to press are covered in Appendix I.

complies with certain residence requirements in the province and the electoral district of polling and who falls under no statutory disqualifications, is entitled to vote. These qualifications apply with modifications to voters in all provinces. The principal exception gives voting privileges to persons in Saskatchewan at the age of 18 and in Alberta and British Columbia at 19 years.

Subsection 1.—Newfoundland

The Government of Newfoundland consists of a Lieutenant-Governor, an Executive Council and a Legislative Assembly. At May 31, 1955 Colonel the Honourable Sir Leonard Outerbridge was Lieutenant-Governor of the Province; he was commissioned on Aug. 17, 1949.

The Legislative Assembly has 28 members elected for a term of five years. The General Assembly elected Nov. 26, 1951 is the 30th in the history of Newfoundland and the 2nd since Confederation.

The Premier and each Cabinet Minister receives a salary of \$7,000 per annum plus a sessional indemnity of \$3,000. Each Member of the House of Assembly receives a sessional indemnity of \$3,000. An additional allowance of \$2,000 is made to the Leader of the Opposition.

14.—Legislatures of Newfoundland since Confederation and Ministry as at May 31, 1955

Subsection 2.—Prince Edward Island

The Government of Prince Edward Island consists of a Lieutenant-Governor, an Executive Council and a Legislative Assembly.

The Honourable T. W. L. Prowse, Lieutenant-Governor of the Province at June 30, 1955, was commissioned to office on Oct. 4, 1950. Lieutenant-Governors since Confederation are cited in the 1951 Year Book, p. 86.

The General Assembly elected May 25, 1955 is the 48th in the history of Prince Edward Island Legislatures and the 23rd since Confederation. It has 30 members from 15 electoral districts who serve for a statutory term of five years. One-half of the Members of the Legislative Assembly are elected on a property vote. Each district elects one Councillor (elected on a property vote) and one Assembly member (elected on a general franchise vote).

The annual salary of the Premier is \$6,000 and each Cabinet Minister, with two exceptions, receives \$4,000; the Minister of Education and the Minister of Health each receive \$3,000. Each Member of the Assembly is paid the sum of \$1,000 for each session attended by him and an additional amount of \$500 tax free as indemnity for expenses incurred. The Speaker is paid an additional sum of \$400 and a further additional amount of \$200 tax free as an indemnity. The Leader of the Opposition is paid an additional sum of \$800 and a further additional amount of \$200 tax free for expenses incurred by him in relation to his official duties.

Subsection 3.—Nova Scotia

The Government of the Province of Nova Scotia has a Lieutenant-Governor, an Executive Council and a House of Assembly.

The Honourable Alistair Fraser, Lieutenant-Governor at June 30, 1955, was commissioned to office Sept. 1, 1952. Lieutenant-Governors since Confederation are cited in the 1951 Year Book, p. 87.

The General Assembly has 37 members elected for five years, the maximum duration of its existence. The Assembly elected May 26, 1953 was the 45th in Nova Scotia's history and the 22nd since Confederation.

The Premier of the Province receives a salary of \$12,000 per annum and each Cabinet Minister a salary of \$10,000 per annum. Each Member of the House of Assembly receives a sessional indemnity of \$2,400 and an allowance of \$1,200 for expenses incidental to the discharge of his duties. The Leader of the Opposition receives an allowance of \$3,000 in addition to his sessional indemnity.

Subsection 4.—New Brunswick

The Government of New Brunswick has a Lieutenant-Governor, an Executive Council and a House of Assembly.

The Honourable David Laurence MacLaren, Lieutenant-Governor at May 31, 1955, was commissioned to office Nov. 1, 1945. Lieutenant-Governors since Confederation are cited in the 1951 Year Book, p. 89.

The General Assembly elected Sept. 22, 1952 is the 42nd in New Brunswick's history and the 15th since Confederation. It has 52 members who are elected for a statutory term of five years.

The Premier receives \$5,000 per annum in addition to the salary for any other portfolio he may hold. The salary of each Cabinet Minister is \$7,500, the amount paid as indemnity to each Member of the House of Assembly is \$2,000, plus an additional \$1,000 allowance for expenses. The Leader of the Opposition receives an additional \$3,000. An allowance of \$1,000 in addition to the regular indemnity is made to the Speaker.

Subsection 5.—Quebec

The Government of Quebec consists of the Lieutenant-Governor, an Executive Council, and a bicameral legislature—the Legislative Council and the Legislative Assembly.

The Honourable Gaspard Fauteux, Lieutenant-Governor at May 31, 1955, was commissioned to office Oct. 3, 1950. Lieutenant-Governors since Confederation are cited in the 1951 Year Book, p. 90.

The Legislative Council has 24 members nominated for life by the Lieutenant-Governor in Council. The Legislative Assembly has 92 elected members and like the Legislative Council has the power to bring forward Bills relating to civil and administrative matters and to the amendment or repeal of laws that already exist. A Bill to be approved by the

Lieutenant-Governor must have received the assent of both Houses. Only the Legislative Assembly can bring forward a Bill requiring the expenditure of public money. The maximum life of a Legislature is five years.

Salaries and allowances of the Premier, Members of the Executive Council, Legislative Council and Legislative Assembly are fixed according to R.S.Q. 1941, c. 4 as amended by 1-2 Elizabeth II as follows: all Members of Legislative Assembly and Legislative Council receive \$4,000 per annum as salary and \$2,000 by way of allowances; in addition the Premier receives \$10,000 as salary, \$4,000 allowances and \$2,000 for lodging allowance; Ministers with portfolio an additional \$8,000 as salary and \$2,000 allowances; Ministers without portfolio an additional \$3,000 salary and \$2,000 allowances; the Leader of the Opposition in the Legislative Assembly an additional \$6,000 salary, \$2,000 allowances and \$2,000 for lodging allowance; and the Leader of the Opposition in the Legislative Council an additional \$5,000 salary and \$2,000 allowances.

Subsection 6.—Ontario

The Government of Ontario consists of the Lieutenant-Governor, the Executive Council and the House of Assembly. The Honourable Louis O. Breithaupt, LL.D., Lieutenant-Governor of the Province at June 30, 1955, was commissioned to office Jan. 24, 1952. Lieutenant-Governors since Confederation are cited in the 1951 Year Book, p. 92.

The House of Assembly, the single-chamber Legislature of the Province, is composed of 98 members elected for a statutory term of five years on an adult suffrage basis.

Besides the regular Departments of Government the Niagara Parks Commission, the Ontario Municipal Board, the Hydro-Electric Power Commission of Ontario, the Ontario-St. Lawrence Development Commission, the Ontario Northland Transportation Commission, the Liquor Control Board and the Liquor Licence Board have been created.

Under the provisions of the Legislative Assembly Act (R.S.O. 1950, c. 202, as amended 1952, c. 51) each Member of the Assembly is paid an annual indemnity of \$2,600 and an allowance for expenses of \$1,300. In addition the Speaker receives a special indemnity at the annual rate of \$3,000 and an expense allowance of \$2,000; the Chairman of the Committee of the Whole a special indemnity at the annual rate of \$1,000; and the Leader of the Opposition a special indemnity of \$3,000 and an annual allowance of \$2,000 for expenses. Each Member of the Cabinet having charge of a Department receives the ordinary indemnity as a Member of the Legislature of \$2,600 plus the \$1,300 expense allowance in addition to his salary as a Minister of the Crown. The salary provided in the Executive Council Act for the Prime Minister is \$14,000 and for a Cabinet Minister having charge of a Department \$10,000. Ministers without portfolio receive only the indemnity and expense allowance of a Member.

Subsection 8.—Saskatchewan

The Government of the Province of Saskatchewan consists of a Lieutenant-Governor, an Executive Council and a Legislative Assembly.

The Honourable W. J. Patterson, Lieutenant-Governor at May 31, 1955, was commissioned to office July 4, 1951. Lieutenant-Governors since Confederation are cited in the 1951 Year Book, p. 95.

The statutory number of members of the Legislative Assembly is 53, elected for a maximum term of five years.

As of Apr. 1, 1954 the Premier receives \$8,500 and each Cabinet Minister \$7,000 annually in addition to the sessional indemnity while the Leader of the Opposition, the Speaker and the Deputy Speaker receive \$4,000, \$2,000 and \$1,000 respectively. The sessional indemnity of a Member of the Legislature is \$2,400 together with an expense allowance of \$1,200. Members for the three northernmost constituencies of Cumberland, Athabasca and Meadow Lake each receive an additional \$500.

Subsection 9.—Alberta

The Government of the Province of Alberta is composed of the Lieutenant-Governor, the Executive Council and the Legislative Assembly.

The Honourable John J. Bowlen, Lieutenant-Governor at June 30, 1955, was commissioned to office Feb. 1, 1950. Lieutenant-Governors since Confederation are cited in the 1951 Year Book, p. 96.

There are 61 members of the Legislative Assembly who are elected for a maximum period of five years.

The salary of the President of the Executive Council is \$11,000 and of a Cabinet Minister \$8,500. A special allowance of \$2,500 is paid to the Leader of the Opposition. The sessional indemnity for each Member of the Legislative Assembly is \$2,400 plus an expense allowance of \$1,200.

Subsection 10.—British Columbia

The Government of British Columbia has a Lieutenant-Governor, an Executive Council and a Legislative Assembly.

Colonel the Honourable Clarence Wallace, Lieutenant-Governor of the Province at May 30, 1955, was commissioned to office Oct. 1, 1950. Lieutenant-Governors since Confederation are cited in the 1951 Year Book, p. 98.

The Legislative Assembly, elected for a statutory term of five years, has 48 members.

Each Member of the Executive Council and the Legislative Assembly receives a sessional allowance of \$2,000 and \$1,000 for expenses. There is also paid to each Member a living allowance of \$15 for each day's attendance at the session and for each Saturday, Sunday or holiday that intervenes between two sittings of the House; the allowance of \$15 in any session is not paid in respect of more than 40 days. There is also allowed to each Member 25 cents for each mile of the distance between his place of residence and the city of Victoria, reckoning such distance, going and coming, according to the nearest mail route. In addition the Premier receives a salary of \$9,000 and each Member of the Executive Council \$7,500. The Leader of the Opposition has a special allowance of \$2,000 and the Speaker and Deputy Speaker receive an allowance of \$1,800 and \$500 respectively.

Subsection 11.—Yukon and Northwest Territories

Yukon Territory.—The Yukon was created a separate Territory in June 1898. Provision is made for a local Government composed of a Chief Executive, styled Commissioner, and an elective Legislative Council of five members with a three year tenure of office. The Commissioner administers the Government under instructions from the Governor in Council or the Minister of Northern Affairs and National Resources. The Commissioner in Council has power to make ordinances dealing with the imposition of local taxes, sale of liquor, preservation of game, establishment of territorial offices, maintenance of prisons and municipal institutions, issue of licences, incorporation of companies, solemnization of marriage, property and civil rights, administration of justice and generally all matters of a local nature in the Territory. The seat of local government is at Whitehorse, Yukon Territory.

TERRITORIAL COUNCIL

(Five members elected 1952, for three years)

Dawson.....	V. C. MELLOR	Whitehorse East.....	J. L. PHELPS
Mayo.....	A. F. BERRY	Whitehorse West.....	F. D. LOCKE
Carmacks.....	A. R. HAYES		

TERRITORIAL OFFICIALS

(AS AT MAY 31, 1955)

Commissioner (Whitehorse).....	F. H. COLLINS
Superintendent of Works and Buildings.....	H. TAIT
Registrar of Vital Statistics.....	W. D. ROBERTSON
Legal Adviser.....	F. G. SMITH

The Director of the Northern Administration and Lands Branch, Department of Northern Affairs and National Resources, is directly responsible for the general administration of the Territory under the Yukon Act (R.S.C. 1952, c. 298) and that Department has three lands and mining officials stationed in the Territory. Other Departments of the Federal Government including Justice, National Revenue, Transport, Post Office, etc., also maintain officials in the Yukon Territory.*

Northwest Territories.—As reconstituted on Sept. 1, 1905 these comprise:—

- (1) all that part of Canada north of the Sixtieth Parallel of North Latitude, except the portions thereof within the Yukon Territory and the Provinces of Quebec and Newfoundland, and
- (2) the islands in Hudson Bay, James Bay and Ungava Bay, except those islands within the Provinces of Manitoba, Ontario and Quebec.

The Northwest Territories Act (R.S.C. 1952, c. 331) provides for the appointment of a Commissioner to administer the government of the Territories under instructions given from time to time by the Governor in Council or the Minister of Northern Affairs and National Resources. As a matter of practice the appointment is held by the Deputy Minister of Northern Affairs and National Resources. For administrative purposes the Territories are divided into the provisional districts of Mackenzie, Keewatin and Franklin (Order in Council dated Mar. 16, 1918). The Northwest Territories Act, as amended, also provides for a Council of nine members, four of whom are elected in the Mackenzie District and five of whom are appointed by the Governor in Council. The Commissioner in Council has legislative powers respecting such matters as direct taxation, establishment and tenure of territorial offices, municipal institutions, controverted elections, licences, incorporation of companies, property and civil rights, administration of justice, game, education, hospitals and generally all matters of a merely local or private nature. The Council meets once each year in the Territories and at least once each year in Ottawa which is the Seat of Government. The resources, except game, remain under the control of the Federal Government. The administration of legislation passed by the Commissioner in Council and the management of resources under federal legislation are carried on by the Northern Administration and Lands Branch of the Department of Northern Affairs and National Resources. Administrative offices are located in the Territories at Fort Smith, Yellowknife, Hay River and Aklavik.

COUNCIL OF THE NORTHWEST TERRITORIES

(AS AT MAY 31, 1955)

Commissioner..... R. G. ROBERTSON**Deputy Commissioner**..... F. J. G. CUNNINGHAM**Members of the Council—**

F. J. G. CUNNINGHAM, L. H. NICHOLSON

Elected..... FRANK CARMICHAEL, J. W. GOODALL, ROBERT C. PORRITT,
JOHN PARKER

Officers of the Council—

Secretary..... R. A. BISHOP

Legal Adviser..... WM. NASON

* Further information on officials of various Federal Government Departments serving the Yukon Territory may be obtained from the Director, Northern Administration and Lands Branch, Department of Northern Affairs and National Resources, Ottawa.

Section 3.—Municipal Government*

There is great dissimilarity in the organization of local government across Canada. Constitutionally jurisdiction over municipal affairs rests with the provincial governments and each province has passed legislation governing aspects of municipal incorporation, powers and duties. Differences in origin and independent growth as well as in geographic location and population composition have naturally resulted in individual requirements among municipalities which have been individually met. A short history of local government organization in Canada is given in the 1955 Year Book, pp. 87-88.

Constant fluctuation in organization is also a feature of local government, particularly evident in the recent period of urban growth. Two major developments in municipal organization occurred in Canada during 1954. Of widespread interest even beyond Canada—its progress is being followed in many of the larger urban areas abroad—was the establishment of the Municipality of Metropolitan Toronto on Jan. 1, 1954. It was incorporated to co-ordinate the more vital services of the thirteen municipalities comprising the metropolitan area of the city and, together with the corresponding Metropolitan School Board, provides education, water supply, major sewage services, area recreation, public transport, arterial roads and other metropolitan services. Local problems of education, public works and municipal services are left to the local school boards and the individual municipalities. The latter also provide police and fire protection. The whole area has been re-assessed on a uniform basis by the Metropolitan Council and a uniform levy is made on the constituent municipalities which continue to impose and collect the taxes.

A development of more immediate concern to rural municipal administration was the establishment in Alberta of the Coterminous Boundary Commission which was directed to adjust and bring into conformity the rural municipal and school district boundaries. Except for the Peace River area in the north the work was completed during 1955.

An outline of municipal organization at the end of 1954 in each of the provinces of Canada is given in the following paragraphs.†

Newfoundland.—Newfoundland has only one city, St. John's‡. The remainder of the population is dispersed in small settlements along the coast and only since 1937 have a few of the larger of these been set up individually as towns with local councils or, where two or three are close together, as rural districts (43 in 1953). These latter are not rural municipalities but merely towns consisting of two or more settlements. Local affairs in the remainder of the Province are administered by the Provincial Government. In 1949 the Local Government Act was passed to facilitate incorporations. There were 32 towns and four rural districts incorporated under the Act at the end of 1954 and 11 local government communities with lesser powers of government.

Prince Edward Island.—The Province has one city, Charlottetown, and seven towns, all incorporated by special Acts. They comprise less than one-half of one per cent of the area of the Island and only about a quarter of its population. The Village Service Act, 1951 provides for the incorporation of villages. The remaining area of the Province is not organized municipally, the three counties being provincial administrative units only.

Nova Scotia.—Municipal organization in Nova Scotia covers the whole of the Province. The two cities, Halifax and Sydney, operate under special charters and certain special legislation. Forty towns operate under the Town Incorporation Act but there are no municipalities incorporated as villages. Cities and towns are independent of counties. The rural area is divided into 18 counties which, in themselves, do not represent units of local government. However 12 of these counties each comprise one municipality and the other six each comprise two municipalities, making a total of 24 rural municipalities.

* Prepared in the Public Finance and Transportation Division, Dominion Bureau of Statistics.

† Municipalities are summarized by type of organization on p. 99.

‡ The incorporation of Corner Brook as a city became effective Jan. 1, 1956.

New Brunswick.—The Province is divided into 15 counties which are incorporated municipalities and have direct powers of local self-government in the rural areas. In effect therefore they are rural municipalities. In most cases certain of their powers apply in both rural and urban municipalities. The five cities—Saint John, Fredericton, Moncton, Edmundston and Lancaster—have special charters, and the 18 towns operate under the Towns Incorporation Act. There are three villages and 37 local improvement district areas within the counties but outside the cities, towns and villages; these have been incorporated for the provision of limited municipal services.

Quebec.—Municipal divisions in Quebec embrace the more thickly settled areas comprising about one-third of the Province, the remainder being governed by the Province as 'territories'. The organized area is divided into 76 county municipalities, which are divided again into local municipalities under the Municipal Code and designated as village, township or parish municipalities or simply as municipalities. The counties as such have no direct powers of taxation. Funds to finance the services falling within their jurisdiction are provided by the municipalities forming part thereof. Parts of some counties are not yet organized into incorporated units of local government, being in outlying areas with little or no population. There are 335 villages and 1,130 townships and parishes. A small number of these are independent of the counties in which they are located. Of the 36 cities a few have special charters. The remainder along with the 139 towns are governed by the Cities and Towns Act and numerous special Acts.

Ontario.—Slightly more than one-tenth of the area of Ontario is municipally organized, the remainder being governed entirely by the Provincial Government. The older section of the Province is divided into 43 counties, five of which are united with others for administrative purposes. Although an incorporated municipality each county is comprised of the towns, villages and townships situated within its borders, which provide its revenue. The Municipality of Metropolitan Toronto encompasses one city, four towns, three villages and five townships. There are 29 cities, 152 towns, 159 villages, 573 townships and 15 improvement districts in the Province. Some of each are located in the northern districts which are not organized into counties.

Manitoba.—Only the southern and settled section of Manitoba comprising less than one-eighth of the area is organized for local self-government. As in the other three western provinces there is no county organization and all municipalities are independent except of provincial control. There are four cities, three with special charters and one governed by a number of special Acts. General Acts govern the 34 towns, 38 villages, 109 rural municipalities and five suburban municipalities. An Act of 1944 (amended January 1945) authorizes organization of local government districts in unorganized or in disorganized (formerly organized but later unorganized) territory, and 12 such districts have been set up.

Saskatchewan.—All municipalities in Saskatchewan derive their powers from general Acts that are designated with the name of the type of municipality. There are eight cities, 99 towns, 379 villages and 296 rural municipalities. The area so organized consists of most of the southern two-fifths of the Province—the remainder of this portion is administered for local purposes by the Province in unincorporated local improvement districts. The northern three-fifths is sparsely populated and without local government though some municipal services are provided by the Province through operation of the Northern Administrative Area.

Alberta.—In Alberta there are eight cities, 146 villages and 48 rural municipalities known as municipal districts. Included in the latter are seven county municipalities which are not counties as they exist in Ontario for example but municipalities where the council administers education and municipal hospitals. There are also some unincorporated improvement districts administered by the Province in less densely settled areas but only about one-fifth of the Province is organized.

British Columbia.—Less than 0.5 p.c. of the area of British Columbia is organized into municipalities. Additional small areas have sufficient population to require administration of local activities by the Provincial Government. There are 35 cities, 49 villages and 29 districts. The latter are chiefly rural municipalities except for those adjacent to the principal cities of Victoria and Vancouver, which are largely urban in character. It should be emphasized however that the application of the name "city" is somewhat different from the commonly accepted meaning in that several of them have populations of fewer than 1,000 and perhaps one-half or more would not normally be incorporated as cities in another province.

Yukon and Northwest Territories.—There are two cities and one town in the Yukon Territory and two local administrative districts in the Northwest Territories, all of which provide some municipal services to their local areas. These are not shown in Table 24.

24.—Municipalities, by Official Designation¹ and by Statistical Classification² by Province as at Dec. 31, 1951

¹ This section of the table groups the municipalities according to their official nomenclature, which is roughly indicative of size and nature (see footnote 5). ² This section of the table groups the municipalities under the classification devised by the Dominion-Provincial Conferences on Municipal Statistics, the classification being designed to bring municipalities into comparable groups for statistical presentations. ³ Includes 11 local government communities. ⁴ See text on p. 97. ⁵ Rural municipalities are designated by different names in the different provinces. ⁶ Includes 15 improvement districts. ⁷ Includes 5 units of self-government known as Suburban Municipalities; does not include local government districts. ⁸ Excludes 20 improvement districts. ⁹ Includes 7 county municipalities and changes resulting from establishment of coterminous boundaries (see p. 97). ¹⁰ Excludes 54 improvement districts. ¹¹ Excludes 50 local improvement districts. ¹² Municipalities shown wholly or partly in metropolitan areas by 1951 Census but does not include Municipality of Metropolitan Toronto, which is shown with counties. ¹³ Classified as suburban and semi-urban by provincial authorities.

Section 4.—Federal and Provincial Royal Commissions

Federal Royal Commissions.*—Royal Commissions established from Apr. 1, 1954 to May 31, 1955 are reported here in continuation of those previously reported in the Year Books beginning with the 1940 edition at pp. 1108-1110.

<u>Nature of Commission</u>	<u>Commissioner</u>	<u>Date</u>
To enquire into, review and report on the administration of quartz mining and placer mining in the Yukon Territory.	George Edward Cole	Apr. 29, 1954
To enquire into the application and effects of agreed freight rates as authorized by the Board of Transport Commissioners.	Hon. W. F. A. Turgeon	May 20, 1954
To enquire into the operation of the Patent Act, the Industrial Design Act, the Copyright Act and other related legislation.	Rt. Hon. J. L. Ilsley, <i>et al</i>	June 10, 1954
To enquire into the damage caused by the flood in the Humber River Valley, Ont.	John B. Carswell and D. Bruce Shaw	Oct. 20, 1954
To enquire into the coastal trade of Canada.	Hon. Mr. Justice W. F. Spence, <i>et al</i>	Mar. 1, 1955

Provincial Royal Commissions.—Only Royal Commissions established in 1954-55 are reported here, this list being in continuance of those in previous Year Books beginning with the 1948-49 edition.

<u>Province and Nature of Commission</u>	<u>Commissioner</u>	<u>Date</u>
NOVA SCOTIA		
Royal Commission on automobile insurance.	Hon. Eugene Q. Parker, Q.C.	Apr. 6, 1955
MANITOBA		
The Manitoba Liquor Enquiry Commission.	John Bracken	May 12, 1954
The Crop Insurance Commission.	Wilfrid G. Malaher	Dec. 1, 1954
ALBERTA		
Metropolitan Planning Commission to enquire into the administration and financing of school and municipal services in the cities of Edmonton, Calgary and surrounding areas.	Dr. G. F. McNally (Chairman), G. M. Blackstock, Percy G. Davies, Ivan C. Robinson, Charles P. Hays.	July 19, 1954
BRITISH COLUMBIA		
Royal Commission to enquire into matters connected with the enforcement of Orders of the Milk Board in Vancouver area and any other matter in relation to the production, marketing and distribution of whole milk in the Province.	Hon. Mr. Justice J. V. Clyne	Sept. 3, 1954†
Royal Commission to enquire into matters relating to Doukhobor lands.	His Hon. Judge Arthur Lord	Sept. 8, 1954
Royal Commission to enquire into all matters relating to the forest resources of the Province.	Hon. Chief Justice Gordon McG. Sloan	Jan. 7, 1955
Royal Commission to enquire into the circumstances surrounding the issuance of forest management licences since the enactment of Sect. 32A, c. 38 of the Statutes of 1947 for the purpose of ascertaining the truth of allegations made in the Legislative Assembly regarding impropriety in connection with the issuance of forest management licences.	His Hon. Judge Arthur E. Lord	Feb. 17, 1955
Royal Commission to enquire into the amount of damage, if any, suffered by reason of the construction of a logging road by the Comox Logging and Railway Company by those owners of lots who have not consented to the construction of the road and to enquire into the amount of costs which should be payable to the owners of lots.	His Hon. Judge Lawrence Arnold Hanna.	Mar. 29, 1955

* Commissions constituted under Part I of the Federal Inquiries Act.

† Interim report dated Feb. 2, 1955, mimeographed, 4 pp.

PART III.—ADMINISTRATIVE FUNCTIONS OF THE FEDERAL GOVERNMENT

In the following special article the Canada Year Book presents for the first time information concerning the administration and control of the financial affairs of the Federal Government.

FINANCIAL ADMINISTRATION OF THE GOVERNMENT OF CANADA*

The fundamental principles under which the financial affairs of the Government of Canada are administered and controlled are that no tax shall be imposed and no money shall be spent without the authority of Parliament and that expenditures shall be made only for the purposes authorized by Parliament.

There are a number of constitutional provisions relating to Parliament's control of finances, the most important of which are to be found in the British North America Act. Sect. 53 of the Act provides that bills for appropriating any part of the public revenue or for imposing any tax or impost shall originate in the House of Commons, and Sect. 54 further provides that no vote, resolution, address or bill for the appropriation of public moneys shall be adopted or passed by the House of Commons that has not been recommended to the House by a message of the Governor General in the session in which the vote, resolution, address or bill is proposed. In other words all taxing and appropriating measures must originate in the House of Commons and all requests for grants must come from the Crown through responsible ministers, and for such requests the Government is solely responsible. Until such a request is made the House cannot consider or approve a grant.

In practice, financial control is exercised through the adoption of a budgetary system based on the principle that all the financial needs of the Government for each fiscal year—that is, for the period from Apr. 1 of one year to Mar. 31 of the following year—shall be considered at one time, so that the Government, Parliament and the people may have clearly before them the financial problem as it affects the present and prospective condition of the public treasury.

ESTIMATES AND APPROPRIATIONS

Each year during the autumn months, the Minister of Finance writes a formal letter to his colleagues requesting them to have the estimates of the several departments for the following fiscal year prepared and submitted by a certain date to the Treasury Board. The Board, which is a Committee of the Queen's Privy Council for Canada, consists of the Minister of Finance as chairman, and five other Ministers named by the Governor in Council with such additional members of the Privy Council as the Governor in Council may nominate to serve as alternates. A senior officer of the Department of Finance is designated to act as secretary and the Department of Finance provides the Board with such staff as is necessary for the proper conduct of its business. Under the Financial Administration Act, the Board has a statutory duty to advise the Governor in Council on matters relating to finance, estimates, expenditures, financial commitments, establishments, revenues, accounts, the terms and conditions of employment of persons in the public service and general administrative policy in the public service.

When the departmental estimates are received they are assembled by officers of the Treasury Board, comparisons are made with the expenditures of previous years and digests of the supporting data furnished by departments and of other pertinent information are prepared.

The Board reviews each departmental submission in the light of probable revenues and of governmental policy generally, usually consulting the appropriate Minister and calling departmental officials before it. It may reject or reduce an expenditure proposal. Unresolved differences of view may be referred to the Cabinet for final decision. When the Board is satisfied with the substance and form of the estimates, they are submitted to the Cabinet for final consideration. After approval by the Cabinet, they are recommended

* Prepared under the direction of H. R. Balls, Director, Financial Administration and Accounting Policy Division, Department of Finance, Ottawa.

to the Governor General for his approval. At an early date in the parliamentary session, usually late in January or early in February, these estimates, known as the Main Estimates, are laid before the House of Commons by the Minister of Finance on behalf of the Government with a message from the Governor General transmitting and recommending them to the House.

On motion of the Minister of Finance the estimates are referred for consideration to the Committee of Supply, which is a committee of the whole House. In recent years it has been the practice to refer the estimates of certain departments to select committees of the House. For example, the estimates of the Department of External Affairs have been referred to the Committee on External Affairs, and items relating to the Canadian National Railways to the Committee on Government-owned Railways and Shipping. In 1955 a Committee on Estimates was appointed to which the estimates of the Departments of Citizenship and Immigration, Finance, Northern Affairs and National Resources, and Veterans Affairs were referred in order to relieve the House of a detailed consideration of each estimates item. A report to the House is made on the estimates by the Committee and they are then referred back to the Committee of Supply. The consideration of the estimates usually extends over a period of several months; each vote is the subject of a separate resolution and members of the House may question the Minister on any item. However, no private member or Minister on his own responsibility can introduce any new expenditure proposal or any amendment to an estimates item that would result in an increased expenditure.

When the examination of the individual items has been completed, the estimates as approved by the Committee of Supply are referred to the Committee of Ways and Means, also a Committee of the whole House, which is asked to consider a resolution for the introduction of a bill to appropriate moneys to meet the requirements as approved in the Committee of Supply. When the resolution is passed an appropriation bill is introduced and when approved by the House of Commons is sent to the Senate. When passed by both the Senate and the House of Commons it is given Royal Assent and becomes law. As the grants in the Appropriation Acts are grants to the Crown no funds may be disbursed until supply, voted by Parliament to the Crown, is released by a warrant prepared on an Order of the Governor in Council and signed by the Governor General.

Some weeks or even months may elapse after the commencement of the fiscal year before the main Appropriation Act is passed by Parliament and during this interval the functions of the Government must be carried on. To ensure that funds are available for this purpose it is usual for Parliament to pass an interim supply bill granting one-twelfth or one-sixth of the total of each item in the estimates, equivalent to one or two months' supply respectively. If Parliament has not completed its detailed consideration of the estimates before the expiry of the time for which supply has been granted, one or more additional interim supply bills may be introduced, each of which may provide for one or more months' additional supply.

Though every effort is made to cover all anticipated requirements of the fiscal year in the Main Estimates, inevitably some new and unforeseen requirements arise during the year. To provide for these, supplementary estimates are usually introduced after some months of the fiscal year have elapsed—and just prior to the end of the fiscal year further supplementary estimates are laid before the House. The supplementary and further supplementary estimates are dealt with by Parliament in the same manner as the Main Estimates.

In addition to the expenditure items included in the annual Appropriation Acts, there are a number of items which have been authorized by Parliament under the provisions of other statutes. Examples of these "statutory" items are interest on the public debt, family allowances and old age assistance payments. Although it is not necessary for Parliament to pass annually on these items, estimates of payments under these statutory authorities are included in the Main Estimates for purposes of information.

There is also a statutory provision for the expenditure of public money in emergencies where no specific parliamentary appropriation is available. Under Sect. 28 of the Financial Administration Act, the Governor in Council, upon the report of the Minister of Finance that there is no appropriation for the expenditure and upon the report of the appropriate Minister that the expenditure is urgently required, may order that a special warrant be prepared to be signed by the Governor General authorizing the disbursement of the amount estimated to be required. However the use of these special Governor General warrants is restricted to cases where an accident happens to any public work or building and an expenditure for the repair or replacement thereof is urgently required or where any other matter arises in respect of which an expenditure not foreseen or provided for by Parliament is urgently required for the public good. Moreover they may be issued only when Parliament is not in session or is under adjournment *sine die* or to a day more than two weeks after the day the accident happened or the matter requiring the expenditure arose. Governor General warrants are deemed to be appropriations for the year in which they are issued and any unspent balance lapses at the end of the fiscal year.

Every warrant is published in the *Canada Gazette* within 30 days after issue and a statement showing all warrants issued and the amounts thereof is laid before the House of Commons by the Minister of Finance within 15 days after the commencement of the next session of Parliament. No special warrant has been issued during the past five fiscal years.

The Fire Losses Replacement Account Act also provides for the expenditure of public moneys in emergencies. This Act was passed to ensure that, when a fire loss occurs to property under the administration or control of departments or designated agency, Crown corporations funds may be made available with the approval of the Treasury Board to proceed with the repair or replacement without delay. This legislation may be used only when the repair or replacement of the property destroyed or damaged is urgently and immediately required and when there is not sufficient money available in the appropriation for the Service suffering the loss. Any amounts expended thereunder must be charged subsequently to an appropriation or if no appropriation is available must be included in estimates for the Service suffering the loss.

In addition to expenditures for budgetary purposes in the strict accounting sense, Parliament authorizes the disbursement of money for purposes which are not reflected in the budgetary accounts but which are recorded in the Government's statement of assets and liabilities. Examples are the loans to and investments in Crown corporations such as the Canadian National Railways, Central Mortgage and Housing Corporation, and the St. Lawrence Seaway Authority, loans to international organizations and to national, provincial and municipal governments and loans to veterans and others. There are also many disbursements in connection with the various deposit and trust and insurance, pension and guaranty accounts which the Government holds or administers, including the old age security fund which is operated as a separate entity. Although these disbursements are excluded from the calculation of the annual budgetary surplus or deficit, they are all subject to appropriation by Parliament either in the annual Appropriation Acts or in other legislation.

THE BUDGET

Some time after the Main Estimates have been introduced the Minister of Finance presents his annual budget speech in the House of Commons on a motion that the House go into Committee of Ways and Means. In recent years it has become the practice for the Minister to table certain "budget papers" for the information of Parliament on the day before he makes his budget speech. These include a general review of economic conditions and a preliminary review of the Government's accounts for the fiscal year then ending. In his budget speech the Minister reviews the state of the national economy and the financial operations of the Government for the past fiscal year and gives a forecast of the probable financial requirements for the year ahead, taking into account the Main Estimates and making allowances for supplementary and further supplementary estimates and probable lapsings. After calculating the probable budgetary surplus or deficit based

on anticipated expenditures and forecasts of revenue from taxes at prevailing rates estimated in the light of expected economic conditions he then announces his proposals for increases or reductions in taxes and customs tariffs. If no changes are proposed all existing tax rates and customs tariffs remain in effect as it is unnecessary to re-enact tax laws each year. If a change is proposed in a commodity tax such as a sales tax or excise duty on a particular item it is usually made effective immediately and the Minister announces that it will be put into effect pending legislation which when passed will be retroactive to the date of the speech.

At the close of his address the Minister tables the formal resolutions for changes in the existing tax rates and customs tariff which in accordance with Parliamentary procedure must precede the introduction of any money bills. These resolutions give notice of the amendments which the Government intends to ask Parliament to make in the taxation statutes.

The budget speech is delivered in support of a motion that the House go into Committee of Ways and Means but Parliament does not act on the budget proposals until the motion has been adopted. The general debate on the motion to go into Committee of Ways and Means usually lasts for a considerable number of days spread over several weeks. However with the passage of the Minister's motion the way is clear for the consideration of the budget resolutions. When all resolutions have been approved by the Committee of Ways and Means a report to this effect is made to the House and the tax bills are introduced and thereafter are dealt with in the same manner as all other government financial legislation.

REVENUES AND PUBLIC MONEYS

The foregoing describes the processes whereby Parliament authorizes the raising and appropriation of public moneys. The administrative procedures whereby revenues are collected and expenditures are made are for the most part contained in the Financial Administration Act. With respect to revenues the basic requirement is that all public moneys shall be paid into the Consolidated Revenue Fund which is defined as the aggregate of all public moneys that are on deposit at the credit of the Receiver General. The Treasury Board has prescribed detailed regulations governing the receipt and deposit of such moneys. Although the collection of the greater part of all tax revenue is the responsibility of the Department of National Revenue, which administers the custom tariff and the income and excise tax laws passed by Parliament, substantial amounts are collected by other departments.

For the actual custody of public moneys use is made of the Bank of Canada and the chartered banks with their many branches throughout the country. The banks are designated by the Minister of Finance, whose official title is the Minister of Finance and Receiver General of Canada, and balances are allocated to the various banks on the basis of the relative amount of work done by each bank for the Government. The division of funds between the Bank of Canada on the one hand and the chartered banks on the other however, takes into account the immediate cash requirements of the Government to meet outstanding cheques and other obligations as well as consideration of monetary policy.

The Minister of Finance may also "for the sound and efficient management of the public money or the public debt" purchase and hold securities of Canada and pay for them out of the Consolidated Revenue Fund. Any securities so acquired may be sold and the proceeds paid into the Fund. Thus if cash balances in the Consolidated Revenue Fund are in excess of requirements for the immediate future they may be invested in interest earning assets.

EXPENDITURES

The two principal agencies exercising control over expenditures are the Treasury Board which has been described previously and the Comptroller of the Treasury, who is a senior officer of the Department of Finance, with representatives who act as accounting and disbursing officers stationed in all the principal departments.

Within the limits of major policies established by the Cabinet, the Treasury Board exercises a detailed central control over the budgets, programs and staffs of departments and over financial and administrative matters generally. Although the most important part of this control function is exercised during the consideration of the estimates the Board maintains a continuous control throughout the year over certain types of expenditure such as large construction or procurement contracts, the number of employees of various classes and the rates of salaries or wages to be paid to them and various other payments of an unusual nature. The purpose is to ensure that the scale of activities and commitments for the future are held within approved policies, that departments follow uniform, efficient and economical practices, and that the Government is informed of and approves any major development of policy or significant transaction that might give rise to public or parliamentary criticism.

To ensure that the decisions of Parliament, the Government and Ministers in regard to expenditures are enforced, there is a centralized accounting and disbursing system. The Financial Administration Act provides that no payment shall be made out of the Consolidated Revenue Fund without the authority of Parliament, and no charge shall be made against an appropriation except upon the requisition of the appropriate Minister of the department for which the appropriation was made or by a person authorized by him in writing. These requisitions, with certificates that the work has been performed and the material supplied and that the price charged is reasonable or according to contract together with such documents as may be required, are presented to the Comptroller of the Treasury. If the payment is a lawful charge against the appropriation, if it does not result in an expenditure in excess of the appropriation, if it does not reduce the balance available in the appropriation below the amount necessary to meet the commitments charged against it, and if it does not contravene any applicable legislative or executive requirements, the Comptroller will make the required payment. However if he declines to make a payment, disallows an item in an account or refuses to give a certificate, the Minister of the department concerned may report the circumstances to the Treasury Board for decision and the Board may confirm or overrule the action of the Comptroller and give such directions as are necessary to carry out its decision. The Comptroller may transmit to the Board any requisition with respect to which he desires its direction and the Board may order that payment be made or refused.

At the commencement of each fiscal year each department submits to the Treasury Board through the Comptroller a division or allotment of each item included in its estimates. When these allotments have been approved by the Board they cannot be varied or amended without the approval of the Board and expenditures charged to appropriations are limited to such allotments.

To avoid over-expenditure within a fiscal year the Comptroller records and controls commitments due to come in course of payment within the year for which Parliament has provided or has been asked to provide appropriations. Under the Financial Administration Act no contract providing for the issue of public funds may be entered into or have any force or effect unless the Comptroller certifies that there is a sufficient unencumbered balance available in an appropriation or in an item included in the estimates before the House of Commons to discharge any commitments under the contract that would be payable during the fiscal year in which the contract was entered into. In a few cases appropriations contain a limitation upon commitments to fall due in future years with an implication, but only an implication, that Parliament will vote funds in such years to meet commitments incurred within such limits. In general however the law does not place limits upon commitments incurred for payments in future years but the Government, through the Treasury Board and the Comptroller, maintains a careful control over these for it must be prepared in future to ask Parliament for appropriations to cover them.

Any unexpended amounts in the annual appropriations lapse at the end of the year for which they are granted and are not available for expenditure in subsequent years. However for 30 days subsequent to Mar. 31, payments may be made and charged to the previous year's appropriations for debts payable during or prior to that fiscal year.

Under the Financial Administration Act every payment pursuant to an appropriation is made under the control and direction of the Comptroller by cheque drawn on account of the Receiver General or by such other instrument as the Treasury Board may direct. In practice the paid Comptroller's cheques are cleared daily by the banks to the Cheque Adjustment Branch of the Department of Finance and the banks are reimbursed the same day by cheques drawn on the Receiver General's account with the Bank of Canada. In the Cheque Adjustment Branch, the paid cheques are examined and reconciled with the Comptroller's statements of cheques issued and are then retained until they are microfilmed and destroyed in accordance with regulations of the Treasury Board made on the recommendation of the Auditor General.

PUBLIC DEBT

In addition to the collection and disbursement of public moneys for budgetary and non-budgetary purposes the Government receives and disburses substantial sums in connection with its public debt operations. The Financial Administration Act provides that no money shall be borrowed or security issued without the authority of Parliament but with due parliamentary authority the Governor in Council may authorize the Minister of Finance to borrow money by the issue and sale of securities at such rate of interest and subject to such terms and conditions as the Governor in Council may approve. Although the specific authority of Parliament is required for new borrowings the Financial Administration Act authorizes the Governor in Council to approve the borrowing of such sums of money as are required for the redemption of maturing or called securities and, to ensure that the Consolidated Revenue Fund will be sufficient to meet disbursements lawfully authorized to be made from it, he may also approve the temporary borrowing of such sums as are necessary for periods not exceeding six months. The Bank of Canada acts as the fiscal agent of the Government in the management of the public debt.

ACCOUNTS OF CANADA

Under the Financial Administration Act, accounts are kept to show the revenues of Canada, the expenditures made under and the commitments chargeable against each appropriation, the other payments into and out of the Consolidated Revenue Fund, and such of the assets and direct and contingent liabilities as the Minister of Finance believes are required to give a true and fair view of the financial position of Canada.

The statement of assets and liabilities is arranged so as to disclose the amount of the net debt of Canada which, in accordance with the policy enunciated in the budget speech of May 18, 1920, is determined by offsetting against the gross liabilities only those assets which are regarded currently as readily realizable or interest- or revenue-producing. Consequently, though financial assets such as loans and investments are set up on the statement of assets and liabilities, the costs of fixed capital assets are charged to budgetary expenditures at the time of acquisition or construction and Government buildings, public works, national monuments, military assets and other capital assets are not recorded on the statement of assets and liabilities.

FINANCIAL STATEMENTS

Annually, on or before Dec. 31, or, if Parliament is not then in session, within 15 days after the commencement of the ensuing session, the *Public Accounts* is laid before the House of Commons by the Minister of Finance. The *Public Accounts* contains a survey of the financial transactions of the fiscal year, statements of the revenues and expenditures for the year and of the assets and direct and contingent liabilities of Canada as at the end of the year, together with such other accounts and information as are necessary to show the financial transactions and financial position of Canada or which are required by law to be reported in the *Public Accounts*. In recent years it has been the practice to publish in the *Public Accounts* the financial statements of all Crown corporations and the auditors' reports thereon. In addition a monthly statement of the Government's financial operations is published in the *Canada Gazette*.

THE AUDITOR GENERAL

The Government's accounts are subject to an independent examination by the Auditor General who is an officer of Parliament and removable only on address of the House of Commons and Senate. With respect to expenditures this examination is a post-audit for the purposes of reporting whether the accounts have been faithfully and properly kept and whether the money has been expended for the purposes for which it was appropriated by Parliament and the expenditures have been made as authorized; any audit before payment is the responsibility of the Comptroller of the Treasury. With respect to revenues the Auditor General is required to ascertain that all public money is fully accounted for and that the rules and procedures applied are sufficient to ensure an effective check on the assessment, collection and proper allocation of the revenue. With respect to public property he is required to satisfy himself that essential records are maintained and that the rules and procedures applied are sufficient to safeguard and control such property. The Auditor General reports to Parliament the results of his examination, calling attention to every case in which he has observed that (a) any officer or employee has wilfully or negligently omitted to collect or receive money belonging to Canada, (b) any public money was not duly accounted for and paid into the Consolidated Revenue Fund, (c) any appropriation was exceeded or was applied to a purpose or in a manner not authorized by Parliament, (d) an expenditure was not authorized or was not properly vouched or certified, (e) there was a deficiency or loss through the fraud, default or mistake of any person, (f) a special warrant authorized the payment of any money, and (g) any other case that he considers should be brought to the notice of the House. In addition the Auditor General can and in practice does report to Ministers, the Treasury Board or the Government any matter which he thinks calls for attention so that remedial action may be taken promptly.

PUBLIC ACCOUNTS COMMITTEE

It is the usual although not invariable practice to refer the *Public Accounts* and the *Auditor General's Report* to the Public Accounts Committee of the House of Commons which may review the reports in detail calling before them for this purpose the Auditor General and such other officers as it considers necessary.

Section 1.—Departments, Boards, Commissions, etc.

The following paragraphs indicate the functions of the various departments of government and the special boards and commissions in connection with the work of government.

Though it is not possible owing to the limitations of space to enumerate in this Section the details of each service or the divisions or sections of all the departments, the main branches are given along with those services that differ in some quality from the larger class of subjects handled by a department. The work of many of these departments is given in detail in later Chapters of this volume. The Index will be useful in locating required information.

Department of Agriculture.—This Department was established in 1867 (30 Vict., c. 53) and conducts the concerns of all phases of agriculture. Research and experimentation are carried out by the Science Service and the Experimental Farms Service; the maintenance of standards and protection of products by the Production Service and Marketing Service; reclamation and development by the Prairie Farm Rehabilitation Administration and the Maritime Marshland Rehabilitation Administration; security and price stability policies are administered under the Prairie Farm Assistance Administration and the Agricultural Prices Support Board. The results of work in these various fields and information on the policies of the Department in general are made available to the public through the Information Service.

Auditor General's Office.—The Office of Auditor General is authorized under the Financial Administration Act (R.S.C. 1952, c. 116). Duties include the auditing of accounts of expenditures and revenue of Canada and of Crown companies and other instrumentalities and the reporting thereon to Parliament.

Chief Electoral Office.—This Office was established in 1920 under the provisions of the Dominion Elections Act, now the Canada Elections Act (R.S.C. 1952, c. 23), and is responsible for the conduct of all federal elections as well as the elections of members of the Northwest Territories Council. In addition it conducts any vote taken under the Canada Temperance Act. The Chief Electoral Officer reports to Parliament through the Secretary of State.

Department of Citizenship and Immigration.—This Department was constituted in December 1949 (R.S.C. 1952, c. 67) and came into existence on Jan. 18, 1950, under the Minister of Citizenship and Immigration. The main work of the Department is carried on through the following four branches:—

The Canadian Citizenship Branch assists governmental and non-governmental agencies engaged or interested in facilitating the adjustment and integration of newcomers and in making Canadians conscious of their privileges and responsibilities as citizens. The Canadian Citizenship Registration Branch administers the Canadian Citizenship Act and is the custodian of all records under that Act and all Naturalization Acts previously in force. The Immigration Branch administers the Immigration Act and Regulations and is responsible for the selection, examination and movement of immigrants, the exclusion or deportation of undesirables and the settlement or establishment of immigrants in Canada. The activities of the Indian Affairs Branch include management of all Indian affairs. Its organization consists of a headquarters office at Ottawa, a regional supervisory staff, and 87 local agencies in the field.

The Minister of Citizenship and Immigration is responsible to Parliament for the National Film Board, the National Library, the Public Archives, and for the National Gallery of Canada which is governed by a Board of Trustees.

Civil Service Commission.—The Civil Service Commission of Canada dates from the Civil Service Act of 1908. Under this Act the Commission was given the responsibility of applying, wherever possible, the principle of appointment by merit in filling permanent positions within departmental headquarters positions at Ottawa, termed the "inside service".

The Civil Service Act of 1918 extended the competitive system of appointments to cover the outside as well as the inside service and temporary as well as permanent appointments. It made the Commission responsible for establishing a system of organization and classification that would secure uniformity in the staffing of the various departments and in the salaries paid for work of equal levels of difficulty and responsibility.

The jurisdiction of the Commission now extends to all departments of the Government and to a large number of boards and commissions, exclusive of Crown corporations.

The Civil Service Commission, which reports to Parliament and makes recommendations to the Government through the Secretary of State, consists of three members, one of whom serves as Chairman. Each member of the Commission is appointed by the Governor in Council for a term of 10 years and each has the rank and standing of a Deputy Minister. The Commission has a staff of approximately 580 persons working under its direction and located in the headquarters office at Ottawa and in district offices at St. John's, Nfld., Halifax, N.S., Saint John, N.B., Montreal, Que., Toronto, Ont., Winnipeg, Man., Regina, Sask., Edmonton, Alta., and Vancouver, B.C.

Department of Defence Production.—This Department was established on Apr. 1, 1951 when the Defence Production Act (R.S.C. 1952, c. 62) was proclaimed. Under this Act the Minister is given, with certain exceptions, authority to buy defence supplies and construct defence projects required by the Department of National Defence. The Minister may, if authorized by the Governor General in Council, undertake for an associated government anything he may undertake for the Canadian Government. In addition all powers, duties and functions that theretofore were vested in the Minister of Trade and Commerce under any contract, agreement, lease or other writing entered into pursuant to the Department of Munitions and Supply Act, 1939, or the Defence Supplies Act, 1950 are vested in the Minister of Defence Production.

Broadly, the Department's functions are to procure military goods, to construct defence installations and to organize industry for defence as required on behalf of the Department of National Defence, other government departments, and associated governments; to promote the expansion of defence production facilities and the development of defence supporting industries particularly of strategic resources important for the defence of Canada and its allies; and to ensure adequate supplies of essential materials and services for defence requirements. The main procurement units of the Department are six production branches—Aircraft, Ammunition, Electronics, Gun, Machine Tool and Shipbuilding, and the General Purchasing Branch. In addition, there are various service branches which include Administration, Comptroller's, Economics and Statistics, Financial Adviser's, Industrial Security, Legal, and Secretary's.

The following Crown companies report to Parliament through the Minister of Defence Production: Canadian Arsenals Limited, Canadian Commercial Corporation, Crown Assets Disposal Corporation, Defence Construction (1951) Limited, and Polymer Corporation Limited.

Dominion Bureau of Statistics.—The Dominion Bureau of Statistics was set up by statute in 1918 as a central statistical department for Canada (8-9 Geo. V, c. 43). In 1948 this statute, which had been consolidated as the Statistics Act (R.S.C. 1927, c. 190), was repealed and replaced by the Statistics Act (R.S.C. 1952, c. 257); it was amended by 1-2 Elizabeth II, c. 18, assented to Mar. 31, 1953.

The function of the Dominion Bureau of Statistics is to compile, analyse and publish statistical information relative to the commercial, industrial, financial, social and general condition of the people and to conduct a census of population and agriculture of Canada at ten year intervals.

The Bureau is the principal publication agency of the Federal Government; the subjects of the reports cover all aspects of the national economy. The Bureau reports to Parliament through the Minister of Trade and Commerce.

Department of External Affairs.—This Department was established in 1909 by "An Act to create a Department of External Affairs" (R.S.C. 1952, c. 68). Its main function is the protection and advancement of Canadian interests abroad. The head of the Department of External Affairs is the Secretary of State for External Affairs. The senior permanent officer of the Department is the Under-Secretary (Deputy Minister) who is the chief adviser to the Secretary of State for External Affairs. He is assisted by a Deputy Under-Secretary and by three Assistant Under-Secretaries and a Legal Adviser and is advised by officers in charge of the various divisions, each responsible for a part of the work of the Department. The divisional heads are assisted by Foreign Service Officers, Administrative Officers and by the administrative staff of clerks, stenographers and typists. While serving abroad Foreign Service Officers are formally designated as Ambassadors, Ministers, Counsellors, First, Second and Third Secretaries at diplomatic posts and as Consuls General, Consuls and Vice-Consuls at consular posts. Fifty-eight diplomatic and consular posts are maintained abroad by Canada.

The work of the Department at Ottawa is performed by 17 divisions which can be grouped according to their functions into three categories—political, functional and administrative. There are five political divisions—American, Commonwealth, European, Far Eastern and United Nations; eight functional divisions—Consular, Defence Liaison (1) and (2), Economic, Information, Legal, Historical Research and Reports, and Protocol; and four administrative divisions—Establishments and Organization, Finance, Personnel, Supplies and Properties.

Department of Finance.—This Department, created on June 22, 1869 by an Act respecting the Department of Finance (32-33 Vict., c. 4), is under the authority of the Minister of Finance. The Department is responsible for the financial administration of Canada including raising the money required for the various governmental activities by way of taxation or borrowing. The Comptroller of the Treasury, an officer of the Department, is responsible for all Government disbursements.

The work of the Department is organized in seven principal Divisions: Administration, Financial Administration and Accounting Policy, Superannuation, Treasury Board, Taxation, Economic Policy, and International Economic Relations. The Royal Canadian Mint is a branch of the Department. The Inspector General of Banks and the Comptroller of the Treasury are officers of the Department.

The Tariff Board and the Canadian Farm Loan Board are responsible to Parliament through the Minister of Finance.

Department of Fisheries.—The Department of Fisheries was first organized under a Minister of Fisheries in 1930. Prior to that date the federal fisheries services were maintained by the former Department of Marine and Fisheries, established in 1868. The provinces, under various arrangements, have certain administrative responsibilities in the fisheries but the legislative authority for the regulations of coastal and fresh water fisheries is with the Federal Department of Fisheries.

The work of the Department includes: conservation and development of the fisheries through the enforcement of fishing regulations, the operation of fish culture establishments, management and improvement of spawning streams and control of predators; inspection of fish products for quality control and the encouragement of industrial development; promotion of the greatest utilization of fishery products and a proper public understanding of the resource and the industry.

Agencies connected with the Department are the Fisheries Prices Support Board and the Fisheries Research Board of Canada. The Department is represented on these International Commissions: Pacific Salmon Fisheries, Pacific Halibut, the Northwest Atlantic Fisheries, North Pacific Fisheries, and Whaling.

Department of Insurance.—The Minister of Finance is responsible for the Department of Insurance which originated in 1875 as a branch of the Department of Finance but was constituted a separate Department in 1910. It is authorized and governed by the Department of Insurance Act (R.S.C. 1952, c. 70). Under the Superintendent of Insurance, the Department administers the statutes of Canada applicable to: insurance, trust and loan companies incorporated by the Parliament of Canada; provincially incorporated insurance companies registered with the Department; British and foreign insurance companies operating in Canada; small loans companies and money-lenders; and Civil Service insurance.

Under the relevant provincial statutes the Department examines provincial trust companies in the Provinces of Manitoba and New Brunswick and loan and trust companies in the Province of Nova Scotia.

A Fire Prevention Branch was organized in 1919 with responsibility for the administration of former Sect. 515 of the Criminal Code. Since that time it has maintained fire loss records, made inspections, reported on fire protection legislation and protection methods and endeavoured to extend and co-ordinate fire prevention work in Canada. In 1954 this Branch was transferred to the Department of Public Works.

Department of Justice.—This Department, established by 31 Vict., c. 39 (1868), now operates under authority of the Department of Justice Act (R.S.C. 1952, c. 71). It provides legal services to the Government and the various government departments including preparing and settling government legislation, settling instruments issued under the Great Seal, regulating and conducting litigation for or against the Crown, superintending the acquisition of property and prosecutions under federal legislation other than the Criminal Code, administers federal statutes dealing with legal matters and provides administrative services for the Supreme Court of Canada and the Exchequer Court.

The Department also superintends the penitentiaries and administers the prison system of Canada.

Department of Labour.—The Department of Labour was established in 1900 by Act of Parliament (63-64 Vict., c. 24) and now operates under authority of the Department of Labour Act (R.S.C. 1952, c. 72). The Department administers, under the Minister of Labour, legislation dealing with: industrial relations, investigation of disputes, etc.; fair employment practices; the regulation of fair wages and hours of labour; reinstatement in civil employment; government annuities; government employee compensation; merchant seamen compensation; vocational training; promotion of labour management co-operation services; co-ordination of services for rehabilitation of disabled civilians. The Department publishes the *Labour Gazette*, as well as bulletins giving information on industrial and related subjects.

The Unemployment Insurance Commission, which also maintains the National Employment Service, reports to the Minister of Labour. The Canada Labour Relations Board acts on behalf of and the National Advisory Council on Manpower acts in an advisory capacity to the Minister of Labour and the Merchant Seamen Compensation Board reports to the Minister of Labour. The Department is the official liaison agency between the Canadian Government and the International Labour Organization.

Department of Mines and Technical Surveys.—This Department was created by an Act of Parliament (13 Geo. VI, c. 17) which received Royal Assent on Dec. 10, 1949. Its establishment resulted from the reorganization of certain former departments into an integrated organization whose primary function is to provide technological assistance in the development of Canada's mineral resources through investigations, studies and research in the fields of geology, mineral dressing and metallurgy, and geodetic, topographic and other surveys. The Department is under the Minister of Mines and Technical Surveys and is divided into five branches: the Surveys and Mapping Branch, the Geological Survey of Canada, the Mines Branch, the Dominion Observatories, and the Geographical Branch.

The Department also administers the Explosives Act which regulates the manufacture, testing, sale, storage and importation of explosives, and the Emergency Gold Mining Assistance Act which provides cost-aid to the gold industry.

Boards and Commissions are: Canadian Board on Geographical Names; Board of Examiners for Dominion Land Surveyors; International Boundary Commission and Interprovincial Boundary Commissions.

Department of National Defence.—The Department of National Defence was established on Jan. 1, 1923 by the Department of National Defence Act, 1922 and was originally an amalgamation of Militia and Defence, the Naval Service and the Air Board. The Department and Services now operate under the National Defence Act (R.S.C. 1952, c. 184).

In 1940 additional Ministers for Naval and Air Services were appointed and the Department was organized under a Minister of National Defence and two additional Ministers so that there was a Minister and staff for each of the Armed Services. The Department operated under this organization until the cessation of hostilities.

Upon demobilization of the wartime forces the appointment of Ministers of National Defence for Naval Services and Air Service ceased and the Armed Forces were, in 1946, again administered by the Minister of National Defence without additional ministers. In 1953 under authority of an amendment to the National Defence Act an Associate Minister of National Defence was appointed, but in 1954 this appointment became vacant and the Department is again administered solely by the Minister of National Defence.

Department of National Health and Welfare.—This Department was established in October 1944 under the authority of the Department of National Health and Welfare Act (R.S.C. 1952, c. 74). The Department, headed by the Minister of National Health and Welfare, is composed of three branches—Health, Welfare, and Administration—and is administered through two Deputy Ministers.

The Health Branch is divided into three directorates—Health Services, Food and Drugs, and Indian Health Services. It has 14 Divisions active in certain public health fields divided into five main groups—Medical Advisory, Research Development, Environmental Health, Health Insurance Studies, and Health Grants Administration—each of which is headed by a Principal Medical Officer.

The Welfare Branch is made up of the Divisions of Family Allowances and Old Age Security, Old Age Assistance, and Blind and Disabled Persons Allowances. The Department is also responsible for federal civil defence planning, with the Civil Defence Co-ordinator reporting to both Deputy Ministers. The Administration Branch includes divisions where activities cover both health and welfare fields, such as research, information, legal and library services, as well as administrative, personnel and purchasing and supply services.

National Library.—The National Library Act, proclaimed Jan. 1, 1953, brought the National Library into being. Though at an early stage of organization, the Library publishes *Canadiana*—a monthly catalogue of new publications relating to Canada—and work is well advanced on a national union catalogue to serve as a key to the contents of all important libraries in Canada. The National Librarian reports to the Minister of Citizenship and Immigration.

National Museum of Canada.—The National Museum illustrates the natural history of Canada—its geology, biology and anthropology. It was formerly part of the Geological Survey, founded in 1842, but was separated from it in 1920, and is now part of the Department of Northern Affairs and National Resources. The Museum carries out field investigations in botany, zoology, vertebrate palæontology, archæology and ethnology including studies of folk-lore and folk-songs, publishes the results of its research and carries out an extensive educational program.

Department of National Revenue.—From Confederation until May 1918, customs and inland revenue duties were administered by separate departments; after that date they were amalgamated under one Minister as the Department of Customs and Inland Revenue. In 1921 the name was changed to the Department of Customs and Excise. In April 1924 collection of income taxes was placed under the Minister of National Revenue and under the Department of National Revenue Act, 1927 the Department became known as the Department of National Revenue.

The Department is responsible for the assessment and collection of customs and excise duty, taxes and revenues and other services by ports and outports as well as for the assessment and collection of income taxes and succession duties.

The Minister of National Revenue is responsible to Parliament for the Income Tax Appeal Board and also reports to Parliament for the Canadian Broadcasting Corporation.

Department of Northern Affairs and National Resources.—The Department of Northern Affairs and National Resources was established in December 1953, superseding the Department of Resources and Development. In addition to Administration Services, which performs auxiliary functions, the Department is divided into five branches: the National Parks Branch administers the National Parks and National Historic Parks of Canada, National Historic Sites, and wildlife matters coming within the jurisdiction of the Federal Government, and has charge of the National Museum of Canada; the Engineering and Water Resources Branch is responsible for the investigation of water power resources, for the administration of federal assistance to the provinces under the Canada Water Conservation Assistance Act and for federal interests in certain joint federal-provincial construction projects; the Northern Administration and Lands Branch is responsible for the administration of various Federal Acts, Territorial ordinances and regulations pertaining to the government of the Northwest Territories, for the conduct of certain business arising from the general administration of the Yukon Territory, for the administration of natural resources in these Territories, and for Eskimo affairs, as well as for certain lands and mineral rights in the provinces vested in the Crown in the right of Canada; the Forestry Branch conducts investigations in the protection and utilization of the forest resources of Canada, maintains forest experiment stations and forest products laboratories and administers federal assistance to the provinces under the Canada Forestry Act; and the Canadian Government Travel Bureau promotes the tourist industry by encouraging tourist travel from abroad and interprovincial travel in Canada.

The Minister of Northern Affairs and National Resources is also responsible to Parliament for the Eastern Rockies Forest Conservation Board, the Northwest Territories Power Commission, the National Battlefields Commission. The Historic Sites and Monuments Board of Canada, an honorary body of recognized historians representing the various provinces, and the Advisory Board on Wildlife Protection act in an advisory capacity to the Minister in these fields. The Deputy Minister is Commissioner of the Northwest Territories.

Post Office Department.—Administration and operation of the Canada Post Office, by virtue of the Post Office Act (R.S.C. 1952, c. 212) and under the Postmaster General, includes all phases of postal activity, personnel, mail handling, postal accommodation, transportation of mails by land, water, rail and air and the direction and control of financial services including the operation of money order and savings bank business.

Public Archives.—The Public Archives was founded in 1872 and is administered under the Public Archives Act (R.S.C. 1952, c. 222) by the Dominion Archivist who has the rank of a Deputy Minister and reports to Parliament through the Minister of Citizenship and Immigration. Its purpose is to assemble and make available to the public a comprehensive collection of historical source material relating to the history of Canada. Major emphasis is placed upon official records of the Government and the personal papers of political leaders and other prominent figures. These are supplemented by copies of many records in the British and French archives that relate to Canada, a fine map collection, a historical library, and many prints, paintings and photographs.

Department of Public Printing and Stationery.—This Department was established in 1886 and is in the charge of the Queen's Printer and Controller of Stationery.

The Department is responsible for supplying all requirements of printing and stationery to Parliament and Departments of the Canadian Government; the distribution and sale of government publications; the publication of the *Canada Gazette*, and all departmental reports, papers, etc., required to be published by authority of the Governor General in Council (R.S.C. 1952, c. 226) and the publication of the Statutes of Canada (R.S.C. 1952, c. 230).

The Department of Public Printing and Stationery is under the jurisdiction of the Secretary of State.

Department of Public Works.—This Department was constituted in 1867 and operated under the legislative authority of the Public Works Act and other Acts of Parliament (*see* p. 124). It is responsible for the management, charge and direction of the public works of Canada and except as specifically provided in other Acts attends to the construction and maintenance of public buildings, wharves, piers, roads and bridges and the undertaking of dredging and navigable waters protection work. The Department maintains architectural and engineering staffs in each province in addition to the Administrative, Architectural, Engineering and Purchasing and Stores Branches at Ottawa. In 1954 the Fire Prevention Branch of the Department of Insurance was transferred to the Department of Public Works.

The Minister of Public Works is responsible to Parliament for the Central Mortgage and Housing Corporation and for federal interests in the Trans-Canada Highway.

Department of the Secretary of State.—The Secretary of State and Registrar General of Canada is the official medium of communication with the Throne through the Governor General, as well as between the federal and provincial governments through the Lieutenant-Governors, and is the custodian of the Great Seal of Canada and of the Privy Seal of the Governor General. He is responsible for the preparation and tabling of returns in Parliament. He administers legislation relating to patents of invention, trade marks, industrial designs, timber marking, copyright, companies, boards of trade, the registration of trade unions, public officers, public documents and governmental and parliamentary translations. He is also the Custodian of Enemy Property.

The Secretary of State has certain responsibilities with respect to decorations, precedence and ceremonial. The Awards Co-ordination Committee and the Committee on the use of Parliament Hill and the National War Memorial fall within his purview.

Finally, he is the Minister of the Department of Public Printing and Stationery and the spokesman in Cabinet and Parliament of the Civil Service Commission and the Chief Electoral Officer.

Trade and Commerce.—The Department of Trade and Commerce was established by Act of Parliament on June 23, 1887 but did not function until Dec. 5, 1892 when an Order in Council to this effect was passed. Before the formation of the Department assistance in the development of Canada's external trade was provided by eight Canadian Commercial Agents—five in the West Indies, two in Great Britain and one in France—who served on a part time basis and were responsible to the Minister of Finance. In 1895 a Canadian Commercial Agent was appointed at Sydney, Australia as the first full time salaried Agent of the Department—the first Canadian Government Trade Commissioner in the present meaning of the term.

The framework of the present Trade Commissioner Service emerged during the next decade or so, the Commercial Agents gradually giving place to career Trade Commissioners. From 1911 to 1945 the Commercial Agencies Branch was known as the Commercial Intelligence Service. In mid-1955 a total of 112 Trade Commissioners served at headquarters and abroad in 52 posts. These included Assistant Trade Commissioners and agricultural, fisheries and timber specialists. Where Trade Commissioners are members of a mission maintained by the Department of External Affairs they hold diplomatic status and are known as Commercial Counsellors or Commercial Secretaries.

The Department was expanded after the Second World War to provide a wider range of services to Canadian businessmen. It now comprises: the Canadian Trade Commissioner Service, Commodities Branch (including the Transportation and Trade Services Division), Agriculture and Fisheries Branch, International Trade Relations Branch, Information Branch, Industrial Development Branch, Economics Branch, Standards Branch, International Economic and Technical Cooperation Division and the Canadian Government Exhibition Commission.

The following boards, commissions, Crown companies and agencies report to Parliament through the Minister of Trade and Commerce—six of them through his capacity as Chairman of the Privy Council Committee on Scientific and Industrial Research: Board of Grain Commissioners, Canadian Wheat Board, Dominion Bureau of Statistics, Export Credits Insurance Corporation, Trans-Canada Air Lines, Atomic Energy Control Board, Atomic Energy of Canada Limited, Canadian Patents and Development Limited, National Research Council, Eldorado Mining and Refining Company Limited, Eldorado Aviation Limited and Northern Transportation Limited.

Department of Transport.—The Department was created on Nov. 2, 1936 from the former Department of Marine, Railways and Canals and the Civil Aviation Branch of the Department of National Defence (R.S.C. 1952, c. 79).

The work of the Department consists of four main Services: Marine, Air, Canals and Railways. The work of the Marine Service includes aids to navigation, nautical and pilotage services, marine agencies, steamship inspection and floating equipment and direct supervision over 300 public harbours; seven other harbours come under supervision of the Department but are administered by Commissions. Air Services cover the operation of civil aviation, meteorological and telecommunication divisions. The latter includes the administration and regulation of radar, radio marine and radio aeronautical aids to navigation and communication by wire and by government telegraph and telephone. The Canal Service has jurisdiction over the canals and canalized waterways of Canada. These include the main or primary canals on the St. Lawrence River and Great Lakes and a number of subsidiary or secondary canals.

Other services of the Department are in connection with the Government owned companies: the Canadian National Railways, Hudson Bay Railway, Canadian Government Railway, Canadian National (West Indies) Steamship Service and the Prince Edward Island Ferry and Terminals.

The Minister of Transport is responsible to Parliament for the following boards and commissions: the Air Transport Board; Board of Transport Commissioners; Canadian Maritime Commission; Steamship Inspection Board; National Harbours Board; Park Steamship Company Limited; Canadian National Railway Securities Trust; and the St. Lawrence Seaway Authority. The Minister is also responsible to Parliament for the Canadian Overseas Telecommunication Corporation.

Department of Veterans Affairs.—This Department, established in 1944 (R.S.C. 1952, c. 80), is concerned exclusively with the welfare of veterans and includes medical, dental and welfare services, land settlement and prosthetic services and insurance. The Veterans' Bureau assists veterans in the preparation and presentation of pension claims.

The Minister of Veterans Affairs is also responsible for the Canadian Pension Commission and the War Veterans Allowance Board. The Department has administrative offices in all the larger cities across Canada and at London, England.

Section 2.—Crown Corporations

The Crown corporation form of public enterprise is not a new type of organization in Canada but in recent years, as the work of government has become more complex, greater reliance has been placed on it as the appropriate instrument for administering and managing many public services in which business enterprise and public accountability must be combined.

The use of the corporate device to harmonize public responsibility in the development of economic resources and the provision of public services with the pursuit of commercial and industrial objectives has led to the adoption of many different forms and formulas of management. The most usual practice has been to set up a corporation under the provisions of a special Act of Parliament which defines its purpose and sets forth its powers and responsibilities. However during World War II the Minister of Munitions and Supply was authorized to procure the incorporation of companies under the federal Companies Act, 1934 or under any provincial companies Act to which he might delegate any of the powers conferred on him under the Department of Munitions and Supply Act or any Order in Council. Under this legislation about 28 companies were created to serve a wide variety of purposes; most of these companies have since been wound up.

Following the successful experience during the war years in relying on the Companies Act for the establishment of Crown companies, similar incorporating powers were granted by an amendment to the Research Council Act and have been incorporated in the Atomic Energy Control and the Defence Production Acts.

In 1946 the Government Companies Operation Act was passed to regulate the operation of companies formed under the Companies Act. However it was applicable only to a relatively small number of companies and, in order to establish a more uniform system of financial and budgetary control and of accounting, auditing and reporting for Crown corporations generally, Part VIII of the Financial Administration Act was enacted in 1951 and brought into operation by proclamation on Oct. 1, 1952. Upon its enactment the financial provisions of the Government Companies Operation Act, which were covered by similar provisions in the new Act, were repealed.

One of the more interesting features of the new legislation is the attempt that has been made to define and classify Crown corporations.* The Act defines a Crown corporation as a corporation that is ultimately accountable, through a Minister, to Parliament for the conduct of its affairs and establishes three classes of corporation: departmental, agency, and proprietary.

Departmental Corporations.—A departmental corporation is defined as a Crown corporation that is a servant or agent of Her Majesty in right of Canada and is responsible for administrative, supervisory or regulatory services of a governmental nature. Ten departmental corporations are listed in Schedule B to the Act:—

- Agricultural Prices Support Board
- Atomic Energy Control Board
- Canadian Maritime Commission
- Director of Soldier Settlement
- The Director, The Veterans' Land Act
- Dominion Coal Board
- Fisheries Prices Support Board
- National Gallery of Canada
- National Research Council
- Unemployment Insurance Commission.

Agency Corporations.—An agency corporation is defined as a Crown corporation that is an agent of Her Majesty in right of Canada and is responsible for the management of trading or service operations on a quasi-commercial basis or for the management of procurement, construction or disposal activities on behalf of Her Majesty in right of Canada. The following agency corporations are listed in Schedule C to the Financial Administration Act or have been subsequently added to that Schedule by the Governor in Council:—

- Atomic Energy of Canada Limited
- Canadian Arsenals Limited
- Canadian Commercial Corporation
- Canadian Patents and Development Limited
- Crown Assets Disposal Corporation
- Defence Construction (1951) Limited
- Federal District Commission
- National Battlefields Commission
- Northwest Territories Power Commission
- National Harbours Board
- Park Steamship Company Limited.

Two corporations, Canadian Sugar Stabilization Corporation Ltd. and Commodity Prices Stabilization Corporation Ltd., listed in Schedule C when the Financial Administration Act was proclaimed, have since discontinued operations and surrendered their charters. By an Order in Council of June 15, 1955 the name of the Northwest Territories Power Commission was deleted from Schedule D and added to Schedule C effective Apr. 1, 1954.

Proprietary Corporations.—A proprietary corporation is defined as a Crown corporation that (1) is responsible for the management of lending or financial operations, or for the management of commercial or industrial operations involving the production of or

* Not all Crown corporations are subject to the provisions of the Financial Administration Act. For example, the Canadian Wheat Board, the Bank of Canada and its subsidiary, the Industrial Development Bank, because of the special nature of their functions, are excluded from operations of the Crown Corporations Part of the Act and are governed by their own Acts of incorporation, as are such joint enterprises of the Federal and Provincial Governments as the Eastern Rockies Forest Conservation Board and the Halifax Relief Commission. Though not included in the Schedules to the Financial Administration Act, certain provisions of the Act apply to the Northern Ontario Pipe Line Crown Corporation, set up on June 7, 1956, to oversee the building of a cross-country natural gas pipeline.

dealing in goods and the supplying of services to the public, and (2) is ordinarily required to conduct its operations without Parliamentary appropriations. The following proprietary corporations are listed in Schedule D to the Act or have been subsequently added to that Schedule by the Governor in Council:—

Canadian Broadcasting Corporation
 Canadian Farm Loan Board
 Canadian National (West Indies) Steamships Limited
 Canadian Overseas Telecommunication Corporation
 Central Mortgage and Housing Corporation
 Eldorado Aviation Limited
 Eldorado Mining and Refining Limited
 Export Credits Insurance Corporation
 National Railways, as defined in the Canadian National-Canadian Pacific Act, 1933
 Northern Transportation Company Limited
 Polymer Corporation Limited
 The St. Lawrence Seaway Authority
 Trans-Canada Air Lines.

Departmental corporations are governed by the provisions of the Financial Administration Act that are applicable to departments generally. Agency and proprietary corporations however are subject to the provisions of the Crown corporations Part of the Act although, if there is any inconsistency between the provisions of that Part and those of any other Act applicable to a corporation, the Act provides that the latter prevail. There is provision in the Part for the control and regulation of such matters as corporation budgets and bank accounts, the turning over to the Receiver General of surplus money, limited loans for working-capital purposes, the awarding of contracts and the establishment of reserves, the keeping and auditing of accounts, and the preparation of financial statements and reports and their submission to Parliament through the appropriate Minister.

A further form of control is exercised by Parliament through the power to vote financial assistance. This may take different forms. For some corporations, capital may be provided by parliamentary grants, loans or advances that may subsequently be converted into capital stock or bonds; for others it may be by the issue of capital stock to be subscribed and paid for by the Government; or by the sale of bonds either to the Government or the public. A few corporations have financed all or a portion of their requirements from their own resources or earnings. A special financing arrangement recently adopted has been the allocation of the 15 p.c. excise tax charged on radio and television sets and their parts and accessories to the revenue of the Canadian Broadcasting Corporation.

Prior to 1952 Crown corporations did not pay corporate income taxes. However the Income Tax Act was later amended so that in respect of financial years commencing after Jan. 1, 1952 proprietary Crown corporations pay such taxes on income earned in the same manner as any privately owned corporation. One desirable result of this amendment is that the financial statements of these Crown companies are now more comparable with those of private industry, with which in some instances they are in competition, and thus it is easier to assess the relative efficiency of their operations.

The functions of the various Crown corporations are given briefly in the following paragraphs. For a number of them further details are included in the Chapters dealing with the subjects concerned (*see* Index).

Agricultural Prices Support Board.—The Board was established in 1944 (R.S.C. 1952, c. 3) to assist in stabilizing the prices of agricultural products. The Board reports to Parliament through the Minister of Agriculture.

Atomic Energy Control Board.—In December 1946, by Act of Parliament (R.S.C. 1952, c. 11), the regulation and control of atomic energy in Canada were placed under the Atomic Energy Control Board. The Board reports to Parliament through the Chairman of the Committee of the Privy Council on Scientific and Industrial Research.

Atomic Energy of Canada Limited.—This Crown company was incorporated in February 1952 under the Atomic Energy Control Act, 1946 (R.S.C. 1952, c. 11) to take over from the National Research Council on Apr. 1, 1952 the operation of the Chalk River project. The main functions of the company are the operation of atomic reactors, research into many aspects of atomic energy and the extraction, processing and marketing of the byproducts of the reactors. The company reports to Parliament through the Chairman of the Committee of the Privy Council on Scientific and Industrial Research.

Bank of Canada.—Legislation of 1934 (R.S.C. 1952, c. 13) provided for the establishment of a central bank in Canada, the function of which is to regulate credit and currency, to control and protect the external value of the Canadian dollar and to stabilize the level of production, trade, prices and employment so far as may be possible within the scope of monetary action. The Bank acts as the fiscal agent of the Government of Canada, manages the public debt and has the sole right to issue notes for circulation in Canada. The Bank is managed by a Board of Directors appointed by the Government and composed of a Governor, a Deputy Governor and 12 Directors; the Deputy Minister of Finance is also a member of the Board. The Bank reports to Parliament through the Minister of Finance and is governed by its own Act of incorporation. (See footnote, p. 114.)

Board of Grain Commissioners.—Constituted in 1912 under the Canada Grain Act, 1912—now Canada Grain Act, 1930 (R.S.C. 1952, c. 25)—the Board of Grain Commissioners provides general supervision over grain handling in Canada, by licensing elevator operators, inspecting and weighing grain en route to and shipped from terminal elevators, and other services. The Board, comprising a Chief Commissioner and two Commissioners, has authority to inquire into any matter relating to the grading and weighing of grain, deductions for dockage or shrinkage, deterioration of any grain during storage or treatment, unfair or discriminatory operation of a grain elevator, etc. The Board publishes its regulations in the *Canada Gazette* and reports to Parliament through the Minister of Trade and Commerce.

Canadian Arsenals Limited.—This Company was established under the Companies Act by Letters Patent dated Sept. 20, 1945 and is subject to the Government Companies Operation Act (R.S.C. 1952, c. 133) and certain provisions of the Financial Administration Act (R.S.C. 1952, c. 116). The Company was set up to take over and operate Crown owned plant and equipment. Among the items it now manufactures are propellants and explosives, small arms, radars and a wide range of ammunition and components.

Its Divisions, together with the location of their plants, are as follows: Dominion Arsenal Division (Quebec, Val Rose and Rivière-du-Loup, Que.); Explosives Division (Valleyfield, Que.); Filling Division (St. Paul L'Ermite, Que.); Gun Ammunition Division (Lindsay, Ont.); Small Arms Division (Long Branch, Ont.); Instrument and Radar Division (Scarborough, Ont.). The Company is responsible to Parliament through the Minister of Defence Production.

Canadian Broadcasting Corporation.—Legislation passed in 1936 (R.S.C. 1952, c. 32) provides that there shall be a corporation, to be known as the Canadian Broadcasting Corporation, to consist of a Board of 11 Governors appointed by the Governor in Council and chosen to give representation to the principal geographic divisions of Canada. The Board of Governors determines CBC policy and the Chairman of the Board is required to devote the whole of his time to the performance of his duties under the Act.

The General Manager is the Chief Executive of the Corporation and directs the operations and activities of the Corporation as well as the application of CBC policy as determined by the Board of Governors. The organization of the CBC consists of the following principal Divisions: Program, International Service, Engineering, Commercial, Press and Information, Broadcast Regulations, Station Relations, Personnel and Administration, and Treasury. Regional Directors are appointed for Newfoundland, the Maritimes, Quebec, Ontario, the Prairies and British Columbia.

The Corporation reports to a Minister of the Crown (at present the Minister of National Revenue) who is responsible for dealing with CBC operations when these are under consideration in Parliament.

Canadian Commercial Corporation.—This Corporation was established on May 1, 1946 by the Canadian Commercial Corporation Act (R.S.C. 1952, c. 35). It purchases goods and commodities in Canada for the governments of other countries. It also acts as purchasing agent for international agencies such as the United Nations International Children's Emergency Fund and the United Nations Korean Reconstruction Agency. Other functions include arranging production and shipment of Canadian contributions of military stores to NATO countries. The Corporation also serves other departments of the Government of Canada. For instance it arranges for the purchase and production of supplies and services which the Department of Trade and Commerce is making available to other countries under the Colombo Plan. In carrying out its functions the Corporation works closely with the Department of Defence Production. It is responsible to Parliament through the Minister of Defence Production.

Canadian Farm Loan Board.—The Board was organized in 1929 to make loans to farmers secured by mortgage. The Board is responsible to Parliament through the Minister of Finance.

Canadian Government Specifications Board.—This is a co-operative body in which Government and industry participate on a voluntary basis. It was formed June 13, 1934 as the Canadian Government Purchasing Standards Committee, under the auspices of the National Research

Council. It undertakes the preparation of specifications in commodity fields and for materials, processes and equipment in which government departments and agencies may be interested and arranges for testing and research work.

Canadian Maritime Commission.—The Commission was created in 1947 (R.S.C. 1952, c. 38) to consider and recommend policies and measures necessary for the operation, maintenance, manning and development of a merchant marine and a ship building and ship repairing industry. The Commission is responsible to Parliament through the Minister of Transport. (See also Park Steamship Company Limited, p. 120.)

Canadian National Railways.—Operating under an Act to incorporate the Canadian National Railway Company (1919), brought into effect by Order in Council of Jan. 30, 1923, the Canadian National Railways comprised at that time the old Intercolonial Railway and various eastern branch lines (all embraced in the Canadian Government Railways which were turned over to the Canadian National Board for management and operation), the Canadian Northern Railway (1918) and the Grand Trunk Pacific (1923). The Hudson Bay Railway has been operated by the Canadian National Railways for the Canadian Government since 1935 and a separate accounting is made. Additional lines have been built or acquired and are operated by the Canadian National Railways. The Newfoundland Railway was entrusted to the Canadian National Railway Company in 1949 for operation and management. The CNR is controlled by a Chairman and Board of Directors and is responsible to Parliament through the Minister of Transport.

Canadian National (West Indies) Steamships Limited.—Through the medium of this Crown company, the Federal Government provides direct steamship services to the West Indies in conformity with the Canada-West Indies Trade Agreement of 1926. The Company is responsible to Parliament through the Minister of Transport.

Canadian Overseas Telecommunication Corporation.—This Crown company was created on Dec. 10, 1949 by Act of Parliament (R.S.C. 1952, c. 42) to acquire for public operation all external telecommunication assets in Canada, in keeping with the Commonwealth Telegraph Agreement, signed May 11, 1948. This Agreement was designed to bring about the consolidation and strengthening of the radio and cable communication systems of the Commonwealth. The Corporation is responsible to Parliament through the Minister of Transport.

Canadian Patents and Development Limited.—Incorporated under an amendment to the Research Council Act passed in 1946, the primary purpose of Canadian Patents and Development Limited is to endeavour to interest industry, through licensing arrangements, in the inventions and new processes developed by the scientific workers of the National Research Council. Their services are equally available to other Government Departments, publicly supported institutions and universities. The Board of Directors is composed of representatives from industry, the universities, Government Departments, and the National Research Council. The Corporation reports to Parliament through the Minister of Trade and Commerce.

Canadian Wheat Board.—The Board was incorporated under the Canadian Wheat Board Act to market, in an orderly manner, in the interprovincial and export trade, grain grown in Canada. Its powers include authority to buy, take delivery of, store, transfer, sell, ship or otherwise dispose of grain. Except as directed by the Governor in Council, the Board cannot buy grain other than wheat, but since Aug. 1, 1949 the Board has been directed to buy oats and barley also. Only grain produced in the designated area, which includes Manitoba, Saskatchewan, Alberta and parts of British Columbia and Ontario, is purchased by the Board, which controls the delivery of grain into elevators and railway cars in that area as well as the interprovincial movement and export of wheat, oats and barley generally. The Board is governed by its own Act of incorporation. (See footnote, p. 114.) It reports to Parliament through the Minister of Trade and Commerce.

Central Mortgage and Housing Corporation.—This Corporation was incorporated by Act of Parliament (R.S.C. 1952, c. 46) in December 1945 to administer the National Housing Acts. Under the National Housing Act, 1954 (2-3 Elizabeth II, c. 23), the Corporation insures mortgage loans made by approved lenders for home ownership and rental housing, makes direct loans, provides home improvement and rental guarantees, undertakes jointly with provincial governments the assembly of land and the construction of housing projects, conducts housing research, co-ordinates community planning and owns and manages rental housing units built for war workers and veterans. The Corporation also arranges for and supervises the construction of housing projects on behalf of the Department of National Defence. The Corporation is responsible to Parliament through the Minister of Public Works.

Crown Assets Disposal Corporation.—This Corporation is established under the Surplus Crown Assets Act (R.S.C. 1952, c. 260) and is subject to the Financial Administration Act (R.S.C. 1952, c. 116). In June 1944 War Assets Corporation was established by statute to replace War Assets Corporation Limited which had been incorporated in 1943. In 1949 the name of War Assets Corporation was changed to Crown Assets Disposal Corporation. The Corporation's function is to dispose of surplus Crown assets. It is responsible to Parliament through the Minister of Defence Production.

Defence Construction (1951) Limited.—This Company was established by Letters Patent in 1951 to take over the general undertakings of Defence Construction Limited. It took over all the assets and assumed all the liabilities of the former Company. The Company carries out all defence construction with the exception of houses and aeroplane runways and reports to Parliament through the Minister of Defence Production.

Director of Soldier Settlement and Director of the Veterans' Land Act.—The Director of Soldier Settlement (under the Act of 1919) is also the Director of the Veterans' Land Act, and in either capacity is legally a corporation sole. For administrative purposes however the programs carried on under both Acts constitute integral parts of the services provided by the Department of Veterans Affairs.

Dominion Coal Board.—The Board, created in 1947 under the Dominion Coal Board Act (R.S.C. 1952, c. 86), is charged with the duty of studying and recommending to the Government policies respecting the production, importation, distribution and use of coal in Canada. It also administers transportation subventions, other subsidies relating to coal and loans authorized under the Maritime Coal Production Assistance Act (R.S.C. 1952, c. 170). The Board reports to Parliament through the Minister of Mines and Technical Surveys.

Eastern Rockies Forest Conservation Board.—The Board was appointed in 1947 under the Eastern Rocky Mountain Forest Conservation Act which authorized an agreement between the Government of Canada and the Province of Alberta relating to the protection and conservation of the forests of that area of the eastern slope of the Rocky Mountains which forms part of the watershed of the Saskatchewan River. The function of the Board is to plan, supervise and undertake construction, operation and maintenance of projects and facilities necessary for the proper protection of the forests of the area to obtain the greatest possible flow of water in the Saskatchewan River and its tributaries.

During the first seven years of the agreement the Federal Government undertook to provide \$6,300,000 for capital expenditure and Alberta to provide funds for maintenance expenditures. During the period of capital expenditure the Federal Government agreed to appoint the Chairman and one member and the Province one member. After the capital period the arrangement was that the Federal Government appoint one member and that the Government of Alberta appoint two members and name one of the three as Chairman. This latter arrangement became effective on Apr. 1, 1955 when the capital period expired as a result of an amendment to the Act dated July 1952. Consequently the Province of Alberta is now responsible for all future capital and maintenance costs of this area. Under the new arrangement the Province selected the federal member as Chairman, supported by two provincial members. The Board reports to Parliament through the Minister of Northern Affairs and National Resources. (See footnote, p. 114.)

Eldorado Aviation Limited.—Incorporated Apr. 23, 1953 to carry air traffic, both passenger and freight, for Eldorado Mining and Refining Limited and its wholly owned subsidiary, Northern Transportation Company Limited, the Company reports to Parliament through the Chairman of the Committee of the Privy Council on Scientific and Industrial Research.

Eldorado Mining and Refining Limited.—Set up in 1944 under the name of Eldorado Mining and Refining (1944) Limited (the date was omitted from the name in June 1952), the Company's business is that of prospecting for, mining and refining uranium ores in Canada. It reports to Parliament through the Chairman of the Committee of the Privy Council on Scientific and Industrial Research.

Export Credits Insurance Corporation.—This Company commenced operations in 1945 under the Exports Credits Insurance Act, 1944 (R.S.C. 1952, c. 105) and is administered by a Board of Directors (including the Deputy Minister of Trade and Commerce, the Deputy Minister of Finance and the Governor of the Bank of Canada) with the advice of an Advisory Council. Its function is to insure Canadian exporters against non-payment by foreign buyers arising out of credit and political risks involved in foreign trade. The Corporation reports to Parliament through the Minister of Trade and Commerce.

Federal District Commission.—This Commission had its genesis in the Ottawa Improvement Commission, established by Parliament in 1899 to improve and beautify the National Capital by the development and construction of parks and driveways and to co-operate with the City of Ottawa in local improvement and conservation. Its membership is honorary in character and is appointed by the Governor in Council, and it reports to the Prime Minister. In 1927 the organization's name was changed to the Federal District Commission, its scope of operations widened to include adjacent areas, and its membership increased to ten. Under the FDC Act, one representative each of the cities of Ottawa and Hull (usually the mayor) is included in its membership.

The Commission maintains the grounds of all federal buildings in the National Capital area and landscapes the grounds of new government buildings. In the Ottawa-Hull area (exclusive of Gatineau Park), the Commission has developed over 3,000 acres of urban parks and 22 miles of scenic driveways.

In 1946 the Commission became the federal agency responsible for carrying out the National Capital Plan. Commission approval is required for the location, siting and exterior design of new federal buildings or for alterations to existing structures. The membership was further increased to permit the appointment of a commissioner resident in each of the provinces and a separate honorary committee was established by the Commission to advise on the development of Gatineau Park. The National Capital Fund, to which Parliament has made annual grants of \$2,500,000 since its inception in 1948, was made available to the Commission to execute the work of the National Capital Plan and a National Capital Planning Committee was appointed to act as a permanent honorary advisory body to the Commission on the implementation of the Plan.

Fisheries Prices Support Board.—The Board was set up in July 1947 (R.S.C. 1952, c. 120) to recommend to the Government price support measures when severe price declines occur. The Board functions under the direction of the Minister of Fisheries and consists of an Acting Chairman, who is a senior officer of the Department of Fisheries, and five members chosen from private and co-operative firms in the industry. The Board has authority to buy fishery products and to sell or otherwise dispose of them or to pay producers the difference between a price prescribed by the Board and the average price the product actually commands.

Halifax Relief Commission.—The Commission, a joint enterprise of the Legislature of Nova Scotia (Statutes of N.S., 1918, c. 61) and the Parliament of Canada (Statutes of Canada, 1918, c. 24), was incorporated to administer relief funds contributed for the assistance of sufferers in consequence of the disastrous explosion at Halifax, Dec. 17, 1917. (See footnote, p. 114.)

Industrial Development Bank.—The Bank, a subsidiary of the Bank of Canada, was incorporated in 1944 to provide loans to industrial enterprises where financing is not available through recognized lending organizations. (See footnote, p. 114.)

International Joint Commission.—This Commission was established under a joint Canada-United States treaty, Jan. 11, 1909, ratified by Canada in 1911. The Commission, composed of six members (three appointed by the President of the United States and three by the Canadian Cabinet) is governed by five specific Articles of the Boundary Waters Treaty of 1909 which include the right of approval of all matters affecting the natural level or flow of boundary waters on either side of the International Boundary and the power to pass on all applications for works contemplated in waters flowing from or in boundary waters which would raise the natural level.

Problems arising from the common frontier are also referred to the Commission by either country for examination and report; in such cases, the Commission's decisions are in the nature of recommendations. The International Joint Commission has however judicial powers, and can render decisions on problems or questions of difference between the two countries providing both consent to be bound by its judgments. These problems need not be connected with the common frontier. The Commission reports to Parliament through the Secretary of State for External Affairs.

National Battlefields Commission.—This Commission was established by Act of Parliament in 1908 to preserve the historic battlefields at Quebec City. The Commission is composed of nine members, seven being appointed by the Federal Government and one each by the Provinces of Ontario and Quebec. The Commission is supported by an annual statutory grant from the Federal Government and is responsible to Parliament through the Minister of Northern Affairs and National Resources.

National Film Board.—The National Film Board was established in 1939 and the National Film Act (R.S.C. 1952, c. 185) provides for a Board of Governors of nine members—a Government Film Commissioner, appointed by the Governor in Council, who is Chairman of the Board, three members from the public service of Canada and five members from outside the public service. The Board reports to Parliament through a designated Minister of the Crown (at present the Minister of Citizenship and Immigration). The Board is responsible for advising the Governor in Council on film activities and is authorized to produce and distribute films in the national interest and in particular films "designed to interpret Canada to Canadians and to other nations".

National Gallery.—The National Gallery was founded in 1880. By Act of Parliament in 1913 and re-enacted in 1951 it was placed under the management of a Board of Trustees appointed by the Governor General in Council and now operates under the National Gallery Act (R.S.C. 1952, c. 186). It is responsible to Parliament through a Minister of the Crown (at present the Minister of Citizenship and Immigration).

The first charge of the National Gallery is the development and care of the national art collections. Other important services are the arrangement of loans and exhibitions from abroad and from its own holdings for showing in Canada and abroad, the promotion of good industrial design and general extension work consisting of the distribution of reproductions for educational purposes, lectures, educational tours, publications, school broadcasts and art films.

National Harbours Board.—The Board was established by Act of Parliament in 1936. It is responsible for the administration of port facilities at the harbours of Halifax, Saint John, Chicoutimi, Quebec, Three Rivers, Montreal, Vancouver, and Churchill. The Board is responsible to Parliament through the Minister of Transport.

National Research Council.—In 1917 the Research Council Act was passed and in 1928 laboratories for scientific research were established at Ottawa. The National Research Council now has Divisions of Pure and Applied Chemistry, Building Research, Mechanical Engineering, Radio and Electrical Engineering, Pure and Applied Physics, Applied Biology and Medical Research. Regional laboratories have been established at Saskatoon, Sask., and Halifax, N.S.

Patentable processes and improvements developed by the Council are made available under licence to industry through a Crown company, Canadian Patents and Development Limited, and any profits from the licensing arrangements are used for further research and development.

The Minister of Trade and Commerce as Chairman of the Privy Council Committee on Scientific and Industrial Research is responsible to Parliament for the National Research Council.

Northern Transportation Company Limited.—This Company was incorporated in 1947 under the title of Northern Transportation Company (1947) Limited, the date being omitted from the name in 1952. Previously a company chartered under an Alberta Statute, it has been a wholly owned subsidiary of Eldorado Mining and Refining Limited since that Crown company was established and carries out the business of a common carrier in the Mackenzie River watershed. The Company is responsible to Parliament through the Chairman of the Committee of the Privy Council on Scientific and Industrial Research.

Northwest Territories Power Commission.—The Commission was established by Act of Parliament in 1948 to bring electric power to points in the Northwest Territories where a need developed and where power could be provided on a self sustaining basis. The Act was amended in 1950 to give authority to the Commission to provide similar services in the Yukon Territory. The Commission is composed of a Chairman and two members appointed by the Governor in Council; it operates hydroelectric plants on the Snare River in the Northwest Territories and on the Mayo River in Yukon Territory and a diesel electric plant at Fort Smith, N.W.T. The Minister of Northern Affairs and National Resources reports to Parliament for the Commission.

Park Steamship Company Limited.—After World War II this Company acted as an agent for Crown Assets Disposal Corporation in the sale and delivery to purchasers of Government war built ships. This work is completed but the Company remains available to carry out any appropriate duties. It has no staff of its own, any necessary work being done by the staff of the Canadian Maritime Commission (see p. 117). The Company reports to Parliament through the Minister of Transport.

Polymer Corporation Limited.—This Corporation was established in 1942 by Letters Patent under the Companies Act and is subject to the Companies Operation Act (R.S.C. 1952, c. 133) and the Financial Administration Act (R.S.C. 1952, c. 116). It was set up to construct and operate a synthetic rubber plant which now produces a variety of synthetic rubber products. The plant is located at Sarnia, Ont. The Corporation reports to Parliament through the Minister of Defence Production.

St. Lawrence Seaway Authority.—The St. Lawrence Seaway Authority was established by Act of Parliament in 1951 (R.S.C. 1952, c. 242) and came into force by proclamation on July 1, 1954. The Authority is incorporated for the purposes of constructing, maintaining and operating all such works as may be necessary to provide and maintain, either wholly in Canada or in conjunction with works undertaken by an appropriate authority in the United States, a deep waterway between the Port of Montreal and Lake Erie. The Authority is composed of a President, a Vice-President and a Member and reports to Parliament through the Minister of Transport.

Trans-Canada Air Lines.—TCA came into being by Act of Parliament in 1937 (R.S.C. 1952, c. 268) to provide for the development of a government-controlled scheduled transcontinental air service. Transatlantic air services which were inaugurated by the Department of Transport during World War II were later turned over to TCA. TCA now maintains passenger, mail and commodity traffic services over nationwide routes and also services to the United States, Mexico, England, Scotland, Ireland, France, West Germany, Bermuda, the Bahamas, Jamaica, Barbados and Trinidad. TCA is responsible to Parliament through the Minister of Trade and Commerce.

Unemployment Insurance Commission.—The Commission was appointed on Sept. 24, 1940 under the provisions of the Unemployment Insurance Act, 1940 (R.S.C. 1952, c. 273) for the purpose of administering the Act and providing a national employment service. It is composed of three Commissioners—a Chief Commissioner, a Commissioner appointed after consultation with organizations representative of workers, and another after consultation with organizations representative of employers. The Chief Commissioner holds office for ten and each of the other Commissioners for five years. The Commission is responsible to Parliament through the Minister of Labour.

Section 3.—Acts Administered by Federal Departments*

List of the Principal Acts of Parliament Administered by Departments of the Government of Canada

NOTE.—Copies of individual Acts of Parliament and amendments may be obtained from the Queen's Printer, Ottawa at prices of from 10 cents to \$1.50 per copy according to number of pages. Where duplications of certain Acts appear in the list, parts of these Acts are administered under the Departments given.

Department, Year and Chapter of Statute	Name of Act	Department, Year and Chapter of Statute	Name of Act
Agriculture— R.S.C. 1927 36	Criminal Code, Sect. 235, Race Track Betting	Defence Production— R.S.C. 1952 35	Canadian Commercial Corporation

PART IV.—FEDERAL GOVERNMENT EMPLOYMENT

The Civil Service Commission.*—The Federal Civil Service comprises, in the widest sense, all servants of the Crown—other than those holding political or judicial office—who are employed in a civil capacity and whose remuneration is paid wholly and directly from moneys voted by Parliament. Collectively they form the staffs of the various departments, commissions, boards, bureaux and other agencies of the Federal Government. Nearly every category of occupation is represented in the Civil Service. A few civil servants are appointed by one or both Houses of Parliament directly, a considerable number by departments and other agencies in accordance with the provisions of certain statutes, generally with executive approval of the Governor in Council, and the remainder—by far the majority—are selected and appointed by the Civil Service Commission of Canada.

The Civil Service Commission as the central personnel agency of the Federal Government is the custodian of the merit principle in respect of both initial appointments and promotions. The steps by which the Commission in its present form came to be constituted is the record of Civil Service reform in Canada which began a year after Confederation and culminated in the passing of the Civil Service Act of 1918.

Recruitment.—The recruitment of civil servants is conducted by means of open competitive examination through which every citizen has the right to compete for positions in the service of his country.

Examinations are held periodically as the staff requirements of the public service dictate. Any Canadian citizen may apply for headquarters positions open at Ottawa but applicants for local positions must be residents of the locality in which the vacancy

* Revised by M. M. Maclean, Secretary of the Civil Service Commission of Canada, Ottawa.

occurs. Competitive examinations are announced through the press and through posters displayed on the public notice boards of post offices, offices of the National Employment Service, offices of the Civil Service Commission, public libraries and elsewhere. The examinations may be written, oral, a demonstration of skill, or any combination of these.

The names of persons successful in Civil Service examinations, arranged in order of rank, are recorded on eligible lists. Examination results are formally announced by publication in the *Canada Gazette* and each candidate—successful or unsuccessful—is advised of his standing. Appointments are made as required from the eligible lists which usually remain valid for one year.

The rank of the various successful candidates on eligible lists is influenced by the 'veteran's preference'. Actually the preference is limited largely, in accordance with its definition by law, to members of the Armed Forces who have served overseas in World War I or II or in the Korean theatre of operations. The highest order of preference is the 'disability preference' accorded to pensioners of the Armed Forces who as a result of their war service are unable to re-establish themselves in a civilian occupation.

In recent years the Civil Service Commission has decentralized its operations and now has ten district offices and five sub-offices across the country. The Commission is granting an increasing measure of autonomy and responsibility to these offices to permit more efficient service to field agencies.

Staff Training.—In 1947 the Commission set up a Staff Training Division to promote and guide a systematic service-wide training scheme. The training scheme, sponsored by the Commission, is a joint venture undertaken in co-operation with Federal Government departments most of which have parallel training divisions. The Commission's Training Division is primarily a co-ordinating agent. It promotes and organizes activities, trains departmental instructors in the presentation of courses, prepares and on occasion gives courses of general application to all departments, publishes booklets and other training aids, assists departments in developing training to meet specialized needs, and acts as a general clearing-house for the exchange of information on training matters.

Promotion.—It is a prime objective of the Civil Service Act to create a career service. The result is that promotion, like entrance to the Service, is based on merit and a sound promotion system is developing. The present procedure involves the consideration of three factors: seniority or length of service; efficiency of candidates in their present positions; and fitness for the vacant positions. An automatic rating on seniority is given by the Commission and ratings on efficiency and fitness are provided by the department concerned. Appeal machinery under Commission jurisdiction has been set up for those employees who feel that their qualifications have not been properly assessed.

Position Classification and Compensation.—Provision is made in the Civil Service Act for the classifying of positions in the public service. A system of position classification was instituted in 1919 and positions with like duties and responsibilities were classified alike and remunerated equally. Each position has a title, a set of tasks or duties which are proper to it in the organization in which it occurs and, arising out of these duties, a set of qualifications appropriate for their performance. Positions with duties of similar kind are grouped together under a common title to form a class and grades within the class reflect the level of responsibility.

The determination of rates of compensation for each class is a continuing responsibility of the Commission and salary and wage surveys are conducted constantly. Position classification is a mainspring in the Commission's primary function of recruitment, involving the fixing of standards of qualification for each class of position.

Organization and Methods.—In recent years there has been an increasing awareness of the extent to which economical administration depends on the adoption of modern management techniques and devices. In 1948 the Commission set up an Organization and Methods Service to study problems of management in collaboration with officials directly responsible for major areas of administration. Briefly this Service affords practical assistance to departments and other agencies of the Government through the systematic examination of structure, operations, procedures and work methods. Its growing facilities are offered free of charge to all departments.

Statistics of Federal Government Employment.*—The basic concept behind the survey of Federal Government employment, started in April 1952, was that it should comprehend all classes of employees (excluding members of the Armed Services but including Force members of the Royal Canadian Mounted Police) for the totality of services at the federal level of government, with separate treatment accorded those activities designated as "government enterprises" because of the economic or proprietary nature of these undertakings; hence the title "Federal Government Employment" in contrast to the title used for the previous survey "Civil Service of Canada" with its restrictions as to services and classes of employees. The guiding principle that has been followed in matters of terminology and presentation of data has been strict adherence, except in dealing with services of relatively minor import, to official usages as employed in the *Canada Estimates* and, in classification of employees, to the official designations "classified", "exempt" and "statutory". Comparison with figures of previous years should be made only after careful consideration of the differences in composition of services and classification of employees. These points are more fully elaborated in the *Explanatory Memorandum*.†

Included in this survey as governmental services are all the administrative functions of the Federal Government (*see pp. 107-113*) and all agencies, boards and commissions where the nature of the undertaking is not of a proprietary or economic character, but where payments of salaries and/or wages are by legislative appropriation from the General Revenue Fund, including two Agency Corporations (Federal District Commission and National Battlefields Commission) and one Proprietary Corporation (Canadian Farm Loan Board). Statutory employees are also included as their salaries are paid from the General Revenue Fund in accordance with the terms of an Act of Parliament establishing the position.

The "classified" group embraces several classes of employees including: those who are subject to the Civil Service Act and Civil Service Superannuation Act; those not subject to these Acts but who are employed under other enabling legislation or regulations; those employees of certain Agency and Proprietary Corporations mentioned above; and the "statutory" group, most of whom are only dismissable by an Address to both Houses of Parliament, such as members of the judiciary. The other main group denominated "exempt" is also a composite of groups of employees (prevailing rate, casual, ships' crews), the chief distinctions of which are that, though paid from revenues passed by legislative appropriation, there is not the same security of tenure, the rates paid are determined by those prevailing in the area of work and the employment of these groups is often seasonal. These classes are subject to the Prevailing Rate Employees' General Regulations approved by the Treasury Board. (*See also Chap. XVIII, Labour.*)

Employment of government "enterprises" is treated separately from that of government "services" because of the economic or proprietary complexion of the former. The supposition in respect of enterprises is that costs of operation, among them salaries and

* Prepared in the Public Finance and Transportation Division, Dominion Bureau of Statistics.

† Special report, available from DBS on request.

wages, are paid from the revenues which the undertaking has derived from the activity in which it is engaged. Consequently there exists no provision for a specific appropriation by Parliament for payment of salaries or wages of employees. In addition to the economic or proprietary consideration another distinguishing characteristic of these activities is provision under the Financial Administration Act (R.S.C. 1952, c. 116) whereby all are ultimately accountable for the conduct of their affairs to Parliament through a Minister. The activities falling in the category "enterprises" are listed as follows:—

Atomic Energy of Canada Limited	Defence Construction Limited
Bank of Canada	Eldorado Mining and Refining Limited
Canadian Arsenals Limited	Export Credits Insurance Corporation
Canadian Broadcasting Corporation	Hudson Bay Railway
Canadian Commercial Corporation	Industrial Development Bank
Canadian National Railways	National Harbours Board
Canadian National (West Indies) Steamships Limited	Northern Transportation Company Limited
Canadian Overseas Telecommunication Corporation	Northwest Territories Power Commission
Canadian Wheat Board	Polymer Corporation Limited
Central Mortgage and Housing Corporation	Prince Edward Island Car Ferry
Crown Assets Disposal Corporation	St. Lawrence Seaway Authority
	Trans-Canada Air Lines

The figures pertaining to this group (Table 4) are published in aggregate only in order to preclude (as required under the Statistics Act) any possibility of disclosure as to the operation of a particular enterprise.

PART V.—CANADA'S EXTERNAL RELATIONS

The growth of Canada's international status is reflected in the development of the Department of External Affairs. A review of the organization and development of that Department is given in the 1952-53 Year Book, pp. 101-104.

Section 1.—Diplomatic Representation as at May 31, 1955

NOTE.—For changes in this listing subsequent to July 1, 1955 and names of current Representatives see, *Canadian Representatives Abroad and Representatives of Other Countries in Canada*, published quarterly and obtainable from the Queen's Printer, Ottawa, price 25 cents.

1.—Canadian Representation Abroad

Country and Year Representation Established	Present Status of Representative	Address
Argentina.....1941	Ambassador.....	Bartolomé Mitre, 478, Buenos Aires
Australia.....1939	High Commissioner.....	State Circle, Canberra
Austria.....1952	Minister.....	Strauchgasse 1, Vienna
Belgium.....1939	Ambassador.....	35, rue de la Science, Brussels
Brazil.....1941	Ambassador.....	Avenida Presidente Wilson, 165, Rio de Janeiro
Ceylon.....1953	High Commissioner.....	6 Gregory's Road, Cinnamon Gardens, Colombo
Chile.....1942	Ambassador.....	Avenida General Bulnes 129, Santiago
Colombia.....1953	Ambassador.....	Rm. 613 Edificio Henry Faux, Avenida Jimenez de Quesada 7-25, Bogota
Cuba.....1945	Ambassador.....	Edificio Ambar Motors, Avenida Menocal No. 16, Havana
Czechoslovakia.....1943	Chargé d'Affaires <i>ad interim</i>	Krakovská 22, Prague, 2
Denmark.....1946	Minister.....	4 Trondhjems Plads, Copenhagen
Dominican Republic.....1954	Ambassador.....	410 Calle El Conde, Ciudad Trujillo
Egypt.....1954	Ambassador.....	6 Sharia Rustom, Garden City, Cairo
Finland.....1949	Minister.....	Borgmasterbrinken 3-C. 32, Helsinki
France.....1928	Ambassador.....	72 avenue Foch, Paris xvi
Germany.....1950	Ambassador.....	Zitelmanstrasse 22, Bonn
Greece.....1943	Ambassador.....	31, avenue Vassilissis Sofias, Athens
Haiti.....1954	Ambassador.....	Route du Canape Vert, St. Louis de Turgeau, Port-au-Prince
Iceland.....1949	Minister.....	c/o Canadian Legation, Fridtjof Nansens Plass 5, Oslo, Norway
India.....1947	High Commissioner.....	4 Aurangzeb Road, New Delhi
Indonesia.....1953	Ambassador.....	Djalan Budi Kemuliaan No. 6, Djakarta
Ireland.....1940	Ambassador.....	92 Merrion Square West, Dublin
Israel.....1954	Ambassador.....	Farmers' Bldg., Dizengoff Road, Tel Aviv
Italy.....1947	Ambassador.....	Via Saverio Mercadante 15, Rome
Japan.....1929	Ambassador.....	16 Omote-Machi, 3-Chome, Akasaka, Minato-ku, Tokyo
Lebanon.....1954	Minister.....	Immeuble Alpha, rue Clemenceau, Beirut
Luxembourg.....1945	Minister.....	c/o Canadian Embassy, 35, rue de la Science, Brussels, Belgium
Mexico.....1944	Ambassador.....	Edificio Internacional, Paseo de la Reforma, No. 1, Mexico City
Netherlands.....1939	Ambassador.....	Sophialaan 1A, The Hague
New Zealand.....1940	High Commissioner.....	Government Life Insurance Bldg., Custom-house Quay, C.L., Wellington
Norway.....1943	Minister.....	Fridtjof Nansens Plass 5, Oslo
Pakistan.....1950	High Commissioner.....	Metropole Hotel, Victoria Road, Karachi
Peru.....1944	Ambassador.....	Edificio Boza, Plaza San Martin, Lima
Poland.....1943	Chargé d'Affaires <i>ad interim</i>	31 Ulica Katowicka, Saska Kepa, Warsaw
Portugal.....1952	Ambassador.....	Avenida da Praia da Vitoria No. 48-1 ^a , D ^a , Lisbon
Spain.....1953	Ambassador.....	Edificio España, Avenida de Jose Antonio 88, Madrid
Sweden.....1947	Minister.....	Strandvagen 7-C, Stockholm
Switzerland.....1947	Ambassador.....	88 Kirchenfeldstrasse, Berne
Turkey.....1947	Ambassador.....	Mudafaai Huduk Caddesi, No. 19d, Canakaya, Ankara
Union of South Africa.....1940	High Commissioner.....	Kerry Bldg., 238 Vermeulen St., Pretoria
Union of Soviet Socialist Republics.....1943	Ambassador.....	23 Starokonyushenny Pereulok, Moscow
United Kingdom.....1880	High Commissioner.....	Canada House, Trafalgar Square, London, S.W. 1
United States of America.....1927	Ambassador.....	1746 Massachusetts Avenue, Washington, D.C.

1.—Canadian Representation Abroad—concluded

Country and Year Representation Established	Present Status of Representative	Address
Uruguay.....1952	Ambassador.....	1409 Avenida Agraciada, Piso 7º, Montevideo
Venezuela.....1952	Ambassador.....	Edificio Pan-American, Puente Urapal, Candelaria, Caracas
Yugoslavia.....1943	Ambassador.....	Proliterskih Brigada 69, Belgrade

Section 2.—International Activities*

Subsection 1.—Canada and Commonwealth Relations 1954-55

Consultation at all levels is of basic importance to what has been called "the art of Commonwealth relations". A continuous and close exchange of views on questions of mutual interest is a vital aspect of the flexible political instrument which draws together the eight sovereign independent nations of which the Commonwealth is comprised on a basis of freedom and equality. The aim of this consultation is to ensure that in formulating policies in the international field, each member country should have an appreciation of the views of the other members whose interests are affected.

During the period under review (Apr. 1, 1954 to May 31, 1955) consultation continued to be close and took many forms. The foremost example was the meeting of Commonwealth Prime Ministers which opened in London on Jan. 31, 1955. The conference coincided with the crisis over Formosa and consideration of Far Eastern affairs took up almost half of the plenary sessions. The Prime Ministers also turned their attention to developments in Europe and the Middle East and reviewed the economic situation and the prospects for the sterling area countries in making progress towards freer trade and payments. The problem of security was examined in the light of the development of thermo-nuclear weapons. Discussion was extremely frank. As Canada's Prime Minister, the Rt. Hon. Louis S. St. Laurent, emphasized in his report to Parliament it was of immense value to the Prime Ministers of the Western Governments to get the point of view of important leaders from Asia on vital Asian problems and indeed on all the matters before the meeting.

One important decision taken by the conference was to agree to Pakistan's request to be accepted as a continuing member of the Commonwealth after becoming a republic on the same basis as agreed for India in 1949. In raising this matter, the Prime Minister of Pakistan, Mr. Mohammed Ali, emphasized that there was no desire in his country to weaken the link with the Commonwealth. There was ready agreement that it was for Pakistan to decide what form of constitution it should have; nevertheless the decision that a nation of 80,000,000 people should cease to owe allegiance to the Queen was not taken without a sense of the drama involved.

* Prepared by the Department of External Affairs, Ottawa.

Consultation takes many forms, one of which is reflected in the visits of distinguished national leaders to other countries of the Commonwealth. Insofar as Canada was concerned 1954-55 proved to be particularly fruitful in this regard. During August 1954 His Royal Highness the Duke of Edinburgh spent almost three weeks on a tour of Canada which took him to Ottawa, to the atomic energy establishment at Chalk River, to defence establishments and other points of interest in the western provinces and to Kitimat where he officiated at the pouring of the first ingot at the new aluminum plant. After officially closing the Fifth Empire and Commonwealth Games at Vancouver on Aug. 7, the Duke embarked on an extensive visit to Canada's far north. From Vancouver he flew to Whitehorse in Yukon Territory and then, after visiting Port Radium, Coppermine and Yellowknife in the Northwest Territories, flew to Churchill, Man. Three days later he was at Knob Lake in Labrador where he saw the massive iron ore development. After two days' fishing at Goose Bay, the Duke and his party returned by air to the United Kingdom on Aug. 17.

In November Canada was honoured to receive a visit from Queen Elizabeth, the Queen Mother, who, following a visit to the United States, spent five days in Ottawa during which she was the central figure at numerous official functions and recalled memories of the Royal Tour of 1939.

The first distinguished Commonwealth statesmen to come to Canada during the year were Sir Winston Churchill and Sir Anthony Eden who arrived in Ottawa at the end of June 1954, following their talks with President Eisenhower in Washington. During their stay in the Canadian Capital, the British Prime Minister and Foreign Secretary exchanged views with Canadian Ministers on questions of mutual interest.

At the end of September the Vice-President of India, Dr. Saravapalli Radhakrishnan, spent two days in Ottawa as the guest of the Government before proceeding to McGill University to deliver a series of lectures. A distinguished philosopher and academician, Dr. Radhakrishnan spoke of the Indian approach to world problems in conversations with government leaders and Canadians interested in international affairs.

In October the then Secretary of State for Commonwealth Relations, Viscount Swinton, undertook a three week tour of Canada from coast to coast following similar tours in other Commonwealth countries. Later on the Permanent Under Secretary of State for Commonwealth Relations, Sir Gilbert Laithwaite, also undertook an extensive tour of Canada which carried him to all sections of the country and brought him into touch with public figures in the principal centres.

Early in December the Prime Minister of Ceylon, Sir John Kotelawala, spent some time in Canada in the course of a trip around the world. While in Ottawa Sir John spoke in appreciative terms of Canada's part in Colombo Plan projects in Ceylon. Before leaving for the United States he paid brief visits to Toronto, Niagara Falls and Montreal.

Mr. Mohammed Ali, Prime Minister of Pakistan, visited Ottawa in January 1955 prior to proceeding to the Commonwealth Prime Ministers' Meeting in London.

In March 1955 the Prime Minister of Australia, Mr. R. G. Menzies, spent nearly a week in Canada. Mr. Menzies, accompanied by the Hon. A. G. Townley, Minister for Air and Civil Aviation, and senior advisers met with members of the Canadian Government and was guest of honour at a number of official functions.

Canadian Ministers also made several trips to Commonwealth countries on official business during the year. Prime Minister St. Laurent, accompanied by the Secretary of State for External Affairs, the Hon. L. B. Pearson, attended the Prime Ministers' meetings in London, Eng. at the end of January and was the recipient of the Freedom of the City at a splendid ceremony in Guildhall. In April and May 1955 the Minister of Trade and Commerce and Defence Production, the Rt. Hon. C. D. Howe, undertook a goodwill visit to Australia and New Zealand accompanied by the Deputy Minister of Trade and Commerce, Mr. W. F. Bull. Mr. Howe arrived in Australia by air from Vancouver on Apr. 11, 1955. During his tour he visited four of the six States—New South Wales, Queensland, Victoria and South Australia—and the national capital, Canberra. Between official functions he

found time for conversations with members of the Australian Wheat Board, civil aviation authorities, trade officials and other Australian leaders including members of the Commonwealth and State governments. These conversations were helpful in reaching an understanding of Australian problems and points of view but were subsidiary to the main purpose of his trip.

The Australian tour ended on Anzac Day, Apr. 25 when Mr. Howe and Mr. Bull flew to New Zealand. During his stay in that country Mr. Howe visited Christchurch on the South Island, Wellington and Auckland on the North Island and numerous in-between points. At a State luncheon given in Mr. Howe's honour Prime Minister Holland spoke of Canada as the valued and affectionately regarded senior partner in Commonwealth affairs whose advice was always listened to with respect.

Mr. Howe's tour of Australia and New Zealand was an outstanding success. The warmth and cordiality which he received on both the official and unofficial levels and the keen interest displayed by the press in his distinguished career as a Commonwealth statesman and his leadership in the field of Canadian commercial and industrial development confirm the lively sentiments of friendship which the people of Australia and New Zealand entertain for Canada.

A survey of Commonwealth relations would be incomplete without mention of the Fifth British Empire and Commonwealth Games which were staged in the summer of 1954 in Vancouver. The games were officially opened on the evening of July 30 by Field Marshal the Rt. Hon. Earl Alexander of Tunis and were closed on the evening of Aug. 7 by His Royal Highness the Duke of Edinburgh.

This event brought together on the playing fields of Canada's westernmost province, athletes from the United Kingdom, from Australia and New Zealand, from India and Pakistan, from South Africa, from Hong Kong and the Federation of Rhodesia and Nyasaland and from other parts of the Commonwealth. Their friendly rivalry on the sporting field reflected something of that special "family" relationship which is characteristic of the Commonwealth and of contacts between peoples who belong to it. From the point of view of the numbers of athletes participating, the regions represented, and the standard of competition, the Fifth Games were the most successful ever held. But even more important was the opportunity provided for young men and women from all quarters of the globe to see something of Canada and Canadians, to live and to talk together, to exchange ideas and to gain an understanding and appreciation of those qualities of tolerance and mutual confidence which form the basis of the Commonwealth as a living institution.

A continuing and deep-rooted economic problem arises out of the backward agricultural and industrial condition of many countries of south and southeast Asia. Throughout this area conditions had worsened as a result of destruction and impoverishment during World War II. The age-old enemies of mankind—poverty, illiteracy and disease—were in the ascendant and threatened to undermine the promise of healthy and continuous development which had fired the imagination of the peoples of this region, many of whom had recently assumed responsibility for the conduct of their own affairs. The 1950 Conference of Commonwealth Foreign Ministers at Colombo considered the need for the more industrially advanced countries to give assistance to the nations of south and southeast Asia and fashioned the Colombo Plan. Although enlarged since its inception the Colombo Plan was originally a Commonwealth idea and has played a useful part in strengthening the new nation States in their struggle to improve the living conditions of their peoples and realize their national aspirations. Canada was pleased to play host to the third meeting of the Colombo Plan Consultative Committee in Ottawa in October 1954.

Commonwealth co-operative arrangements also exist in other fields. During recent years international tension made it necessary to devote to the military strengthening of the free world, including the Commonwealth, resources that might have been used to increase the prosperity and welfare of its inhabitants. Collective security arrangements of various kinds have come into being in a number of areas throughout the world and individual Commonwealth countries play a part in these in accordance with their interests. Canada,

along with the United Kingdom, the United States, and a number of European nations, are members of NATO. Australia, New Zealand and the United States are members of ANZUS, which is concerned with the security of the southwest Pacific; and the United Kingdom, Australia, New Zealand and Pakistan have joined with the United States and others in the Southeast Asia Collective Defence Agreement.

Apart from co-operative arrangements for defence, there are a host of other bodies within the Commonwealth which facilitate the transaction of business and carry forward the day-to-day process of consultation and exchange of information. Canada is represented on such standing groups as the Executive Council of the Commonwealth Agricultural Council; the Commonwealth Economic Committee; the Commonwealth Shipping Committee; the Commonwealth Telecommunications Board; the Commonwealth Air Transport Council; the Commonwealth Advisory Aeronautics Research Council; the Commonwealth Liaison Committee; the Commonwealth Committee on Mineral Resources and Geology; the Imperial Institute; and the Imperial War Graves Commission. These bodies form useful means of exchanging information and views on special economic, scientific or technical questions and of working out recommendations for the consideration of the governments concerned.

Canadian representation within the Commonwealth was extended in 1955 by the appointment of a Trade Commissioner to the Federation of Rhodesia and Nyasaland with an office in Salisbury.

Constitutional development in United Kingdom non-self-governing territories continued to attract attention in 1954-55 and progress towards the establishment of a Caribbean Federation was viewed with considerable interest.

During the period covered by this survey the Commonwealth has continued to serve as one of the most effective vehicles of international discussion and co-operation. Its countries contain a quarter of the world's population embracing peoples of many races and religions. Its strength and influence are derived from this and from a common outlook which, despite differences of geography, religion and race, evokes a broadly similar response to most international problems of the day.

Subsection 2.—Canada and the United Nations

In the year ended May 31, 1955 conflicting interests and views of members adversely affected the activities of the United Nations but the Organization nevertheless continued to make progress on many fronts in its efforts to safeguard peace and advance the economic and social welfare of humanity through international co-operation. As the Organization approached its tenth birthday—the anniversary of the signing of the Charter in San Francisco on June 26, 1945—there was reason to hope that experience gained in its formative years would help make it more effective in its second decade.

As a keeper of the peace and promoter of international co-operation for peaceful purposes the United Nations was intended by its founders to have two primary functions—collective security and pacific settlement of disputes. Deadlock in the Security Council—except in the notable case of the outbreak of war in Korea when the Soviet representative was absent—has shifted responsibility for collective security to regional organizations. As a result of its success in mediating disputes however the United Nations can take credit for terminating and preventing many conflicts which might have had disastrous consequences for the world. The facilities of the United Nations for discussion, compromise and mediation were helpful in encouraging the withdrawal of Russian troops from Iran, the lifting of the Berlin Blockade, pacification of the northern borders of Greece and termination of hostilities in Kashmir, Indonesia and Palestine. When the UN itself became involved in fighting in Korea it succeeded in repelling aggression in the first major application of the principle of collective security by an international organization. In the period under review, Canada continued to be represented on the United Nations Truce Supervisory Corps for Palestine and Kashmir. In August 1954 Major General E. L. M. Burns

of Canada was appointed Chief of Staff for the Palestine Truce Supervisory Organization. Continuation of the armistice in Korea facilitated withdrawal of most of the Canadian military forces which had formed the third largest contribution to the United Nations command during hostilities.

The United Nations has been diligent in its efforts to give increasing independence to non-self-governing peoples and to pool the wealth and skills of mankind in the interests of underprivileged peoples and underdeveloped countries. The United Nations helped Israel and Indonesia achieve their independence. The futures of three large territories in Africa—Libya, Eritrea and Somaliland—all formerly under Italian colonial rule, were resolved by the General Assembly, with Libya becoming an independent kingdom, an autonomous Eritrea being federated with Ethiopia and Somaliland destined to emerge as an independent civil state after a ten-year trusteeship régime. In other parts of Africa and in the Pacific a course is being charted for the future self-government of other large groups of dependent peoples living in Trust Territories. Countries administering colonial areas pledge themselves to make the best interests of the inhabitants their first consideration and they report regularly to the United Nations on conditions in their possessions.

Through its Economic and Social Council, the United Nations seeks to promote higher living standards, full employment, economic and social progress and solutions for international economic, social, health and related problems. Support for the activities of the Economic and Social Council has increased slowly but steadily as member nations have recognized that the edifice of world peace must rest on the solid foundation of a sound and growing world economy, that poverty can lead to unrest and that prosperity, like peace, is indivisible. If the efforts of the United Nations to devise a formula for disarmament are successful much of the vast resources now being poured into defence measures will be available for diversion to works of peace. (As a member of the Disarmament Commission and its Sub-Committee, Canada, in the period under review, played an active role in disarmament negotiations.) In the meantime through its voluntary agencies—United Nations Children's Fund, relief and rehabilitation programs in Korea and Palestine and the work of its High Commissioner for Refugees—the Organization is helping relieve the ravages of previous wars. Canada has made substantial contributions to all the voluntary agencies of the United Nations.

In an address at the opening of the ninth session of the United Nations General Assembly in New York on Sept. 23, 1954 Canada's Secretary of State for External Affairs, the Hon. Lester B. Pearson, reviewed a number of difficulties that beset the United Nations during its early years. He emphasized the need to recognize and understand the divisions within the Organization which had weakened it internally—the fundamental division between totalitarian and free societies, the division between the self-governing and non-self-governing parts of the world, the division between the highly industrialized parts of the world and 'underdeveloped' areas. Mr. Pearson referred also to the 'freeze' on the membership applications of twenty-one countries resulting from the 'cold war' and the difficulties arising from Chinese representation. He continued:

"Mr. President, over the nine short years in which the United Nations has existed, it has been threatened from within, and attacked from without. But with all its shortcomings, it is impossible to envisage a world without the network of practice and precedent, the institutions and procedures for peace making and peace enforcement which we mean by the phrase 'the United Nations'. If this United Nations organization did not exist, we should soon have to find another one."

A number of authorities on the United Nations consider that many of the difficulties referred to by Mr. Pearson could be eliminated by revising the Charter. Article 109, paragraph 3 of the Charter provides for a decision on the calling of a review conference to be made at the tenth session of the General Assembly. Because the Charter cannot be amended without the consent of all the members of the Security Council and because the Union of Soviet Socialist Republics has been consistently antagonistic to changes in the Charter, prospects for the holding of a successful review conference are not promising at present.

Developments in the six principal organs of the United Nations in the year ended May 31, 1955 are summarized below.

General Assembly.—The ninth session of the General Assembly was held in New York from Sept. 21 to Dec. 17, 1954 under the presidency of Mr. Elco M. Van Kleffens of the Netherlands. The Secretary of State for External Affairs, Hon. L. B. Pearson, and the Minister of National Health and Welfare, Hon. Paul Martin, were chairman and vice-chairman respectively of the Canadian Delegation.

The most notable development at the session was the agreement by the USSR to join Canada, France, the United States and the United Kingdom in co-sponsoring a procedural resolution setting the stage for renewed discussions in the Sub-Committee of the Disarmament Commission. As acting chairman of the Canadian Delegation, Mr. Martin took the initiative in obtaining the agreement of the USSR to join the other members of the Sub-Committee in co-sponsoring the resolution which eventually was adopted unanimously by the Assembly. This encouraging display of Assembly unanimity was repeated in respect of another resolution co-sponsored by Canada and a number of Western countries which provided for continued negotiations leading towards the establishment of an agency to further co-operation in the peaceful uses of atomic energy and for the convening in 1955 of an international conference of scientists interested in nuclear and related fields. This resolution was based on President Eisenhower's address on the peaceful uses of atomic energy at the eighth session of the General Assembly. The spirit of co-operation and harmony resulting from the unanimity on the resolutions on disarmament and atomic energy waned later in the session when the Communist members introduced a number of propaganda items—among them an appeal for a ban on propaganda favouring a new war.

Considerable time was spent but little progress made on recurring questions such as race conflict in South Africa and political difficulties in Tunisia and Morocco. New and difficult issues relating to Cyprus and West New Guinea were debated with indecisive results. In the absence of any change of view on the part of the major powers the general question of the admission of new members remained unresolved.

In the economic field Canada pledged \$1,500,000 as its contribution to the expanded program of technical assistance for the coming year and announced its preparedness to support the proposed International Finance Corporation which, under the aegis of the International Bank, would promote investment of capital in private enterprise in under-developed countries. On the question of the proposed Special United Nations Fund for Economic Development, the Canadian Delegation supported a resolution providing for further examination of the manner in which such a fund might operate but made it clear that Canada was not committed to the establishment of such a fund.

During debates on problems of international law the Canadian delegation made known its doubts that a suitable definition of aggression could be agreed upon or that any definition could have any practical value at the present time. With respect to studies of the Continental Shelf the Assembly asked the International Law Commission to complete its work on the régimes of the high seas and territorial waters and to submit a final report to the eleventh session of the Assembly in 1956.

The Assembly agreed on a procedure for final revision of the draft International Covenant on Human Rights and also continued its study of recommendations concerning the right of peoples to 'self-determination'. Consideration was also given to the desirability of drafting a supplementary convention on slavery and two measures for the abolition of forced-labour practices. With respect to women's rights, a resolution was adopted urging the abolition of customs or ancient laws reflecting on the human dignity of women.

Security Council.—Although Canada was not a member of the Security Council in the period under review it had a keen interest in a number of the problems dealt with by the Council. The source of chief concern to the Council was the threat of hostilities between Egypt and Israel resulting from border disputes. Major General Burns reported personally to the Council on a clash between armed forces of Egypt and Israel near Gaza on

the evening of Feb. 28, 1955. After hearing General Burns the Council adopted a resolution condemning the Israeli attack in the Gaza strip as a violation of the cease-fire provisions and calling upon Israel to take all necessary steps to prevent such action. On Mar. 30 the Security Council adopted a second resolution requesting General Burns to continue his consultations with the Governments of Egypt and Israel and calling upon the Governments of the two countries to co-operate with General Burns with regard to his proposals "bearing in mind that, in the opinion of the chief-of-staff, infiltration can be reduced to an occasional nuisance if an agreement is effected between the parties along the lines he has proposed". The Council also was concerned with the seizure of an Israeli vessel, the *Bat Galim*, by the Egyptian authorities in the Suez Canal. Other items on the Security Council agenda during the period under review for which no decisive action was taken included "the hostilities in the area of certain islands off the coast of the mainland of China", an alleged attack on a United States naval aircraft by a military aircraft of the USSR, an alleged threat to the security of Thailand and the outbreak of hostilities in Guatemala.

The second round of discussions of the five-nation (including Canada) Sub-Committee of the Disarmament Commission began in London on Feb. 25, 1955 and continued until May 18. During the discussions the Western Powers supplemented earlier basic proposals by putting forward a number of papers on specific aspects of the disarmament program. One of these papers suggested that the armed forces of the United States, the USSR and China should be reduced from present levels to between one and one and a half million while the forces of France and the United Kingdom should be reduced to 650,000. After having ignored the various Western proposals, the Soviet Union submitted lengthy proposals which embodied the United Kingdom-French suggestions on the level of armed forces together with other main features of the Western plan. However the position of the USSR on the most important question, i.e., international control, remained unclear. Moreover the Soviet proposals dealt with a number of issues such as the German problem, which did not come within the terms of reference of the Sub-Committee. The Sub-Committee decided to adjourn in order to enable its members to examine the new Soviet proposals and the situation arising from their submission to the Sub-Committee.

Economic and Social Council.—Though not a member of the Economic and Social Council since completing its second three year term on Dec. 31, 1952, Canada was, in 1955, serving a second term on the Population Commission of the Council, an indefinite term on the Narcotic Drugs Commission, and was re-elected in May 1955 to the Executive Board of the United Nations Children's Fund and for a third three year term to the Statistical Commission. Canada is a member of all ten Specialized Agencies affiliated with the United Nations through the Economic and Social Council. The Specialized Agencies are intergovernmental organizations through which international co-operation in the economic, social and technical fields is achieved and the pooling and exchange of experience and modern techniques is made possible. The Specialized Agencies are: International Labour Organization (ILO), Food and Agriculture Organization (FAO), World Health Organization (WHO), United Nations Educational, Social and Cultural Organization (UNESCO), International Bank for Reconstruction and Development (IBRD), International Monetary Fund (IMF), International Civil Aviation Organization (ICAO), International Telecommunication Union (ITU), World Meteorological Organization (WMO) and Universal Postal Union (UPU).

In 1954 Canada contributed approximately \$1,320,000 to the expenses of the Specialized Agencies in addition to \$1,500,000 to the expanded program of technical assistance, much of which is carried out by the Specialized Agencies with funds allocated for the purpose by the parent body. In the period under review progress was made towards the establishment of two new Agencies—the Intergovernmental Maritime Consultative Organization (IMCO) and the Organization for Trade Co-operation.

Trusteeship Council.—The functions of the United Nations with regard to trusteeship agreements for Trust Territories are exercised with the assistance of the Trusteeship Council which supervises administration of the Trust Territories. At its three sessions

held in the year under review, the Council studied the political, economic, social and educational conditions of the Territories on the basis of the annual reports of the administering States and petitions from the Territories themselves, dealt with a number of specific questions referred to it by the General Assembly and made recommendations to the administering States. The report of a United Nations Visiting Mission to the Trust Territories in East Africa, the seventh of its kind appointed by the Council since it came into being in 1947, was approved at the Council's fifteenth session early in 1955, and a "periodic visiting mission" to Territories in West Africa was named. Canadian policy on matters of Trusteeship before the United Nations General Assembly is governed by a careful weighing, within the provisions of the United Nations Charter, of the responsibilities, rights and aspirations of both the administering States and the indigenous populations. To date Canada has not been elected to the Trusteeship Council.

International Court of Justice.—To "adjust and settle international disputes in conformity with justice and international law" is one of the purposes of the United Nations and it was therefore essential to establish a judicial arm for the Organization. The Statute of the International Court of Justice is an integral part of the Charter of the United Nations. During 1954-55 San Marino, Japan, West Germany and Italy—although non-members of the United Nations—became parties to the Statute of the Court. All members of the Organizations are automatically parties to the Statute. The Court is composed of fifteen judges who are elected in individual capacities. Mr. John E. Read of Canada has been a judge of the Court since 1946.

Secretariat.—The Secretariat operates the administrative machinery of the United Nations. At the ninth session of the General Assembly Canada and a majority of other members approved plans of the Secretary-General for reorganizing the Secretariat. The Secretary-General's proposals included a reduction of 284 posts in the headquarters establishment and a number of important structural changes in the supervisory ranks of the Secretariat. The changes were expected to result in savings and increased efficiency. At the ninth session approval was given for establishment of a procedure for dealing with appeals from decisions of the Administrative Tribunal which considers applications alleging non-observance of contracts of employment of staff members or of their terms of appointment.

Subsection 3.—Canada and the North Atlantic Treaty

Within less than two years of the end of World War II in 1945 and the establishment of the United Nations hopes of a lasting peace gave place to growing anxiety. The United Nations Security Council, which had been given responsibility for maintaining world-wide security, was deliberately prevented by the USSR representatives from fulfilling this function. The Soviet Union maintained its armed forces after the War at a level that insured to itself a preponderance of military strength in Europe. The Soviet Government blocked attempts by the Western Powers to reach a peace settlement in Europe and communist parties were used as an instrument of Soviet policy to sabotage Western European efforts at economic recovery and political co-operation. Under these circumstances, the countries of the Atlantic community felt themselves in grave peril of Soviet aggression and communist subversion and they therefore took special collective measures under the United Nations Charter to maintain peace. The Prime Minister of Canada was one of the first to foresee this development. In 1947, when Secretary of State for External Affairs, he said before the United Nations General Assembly that nations might be forced to seek greater safety "in an association of democratic, peace-loving states willing to accept more specific international obligations in return for a greater measure of national security".

The first step in this direction was taken in the spring of 1948 when Belgium, France, Luxembourg, the Netherlands and the United Kingdom signed the Brussels Treaty establishing Western Union. On Apr. 4, 1949 as a result of negotiations between these

countries, Canada and the United States, the North Atlantic Treaty was signed at Washington, D.C. This Treaty was accepted by all major groups of opinion in Canada and was passed without a single dissenting vote in Parliament.

The original signatories of the Treaty were Belgium, Canada, Denmark, France, Iceland, Italy, Luxembourg, Netherlands, Norway, Portugal, the United Kingdom and the United States. In September 1951 it was agreed that Greece and Turkey should be invited to accede to the Treaty and they were admitted in February 1952. In October 1954 a protocol to the North Atlantic Treaty inviting the Federal Republic of Germany to join NATO was approved together with related arrangements which provided for the establishment of a Western European Union (composed of the Brussels Powers, the German Federal Republic and Italy) and for the restoration of full sovereignty to the German Federal Republic. These measures, designed to bring the German Federal Republic into close and enduring association with the Atlantic Community of free nations, were adopted following the failure of the European Defence Community Treaty which was rejected by the French Assembly in August 1954. On May 6, 1955 the Federal Republic of Germany deposited in Washington its instrument of accession to the North Atlantic Treaty and thus joined NATO as its fifteenth member.

The North Atlantic Treaty and the Organization.—The terms of the Treaty and the organization of the Council and subordinate committees are dealt with in the 1954 Canada Year Book, pp. 113-115.

Developments 1954-55.*—The North Atlantic Council continued in permanent session at Paris under the chairmanship of the Secretary-General, Lord Ismay. Mr. L. D. Wilgress remained the Permanent Representative of Canada to the Council in 1954-55. Besides the regular meetings of the Permanent Representatives, the Council met in Ministerial Session in Paris, France in October and December 1954 and in May 1955.

The October meeting which was attended by Foreign Ministers and Defence Ministers of member countries was called to approve arrangements designed to bring about the full association of the Federal Republic of Germany with the West, and a German defence contribution. The Council approved a resolution to reinforce the existing machinery for the collective defence of Europe, chiefly by strengthening the powers of the Supreme Allied Commander Europe. It also approved a Protocol to the North Atlantic Treaty inviting the Federal Republic of Germany to join NATO.

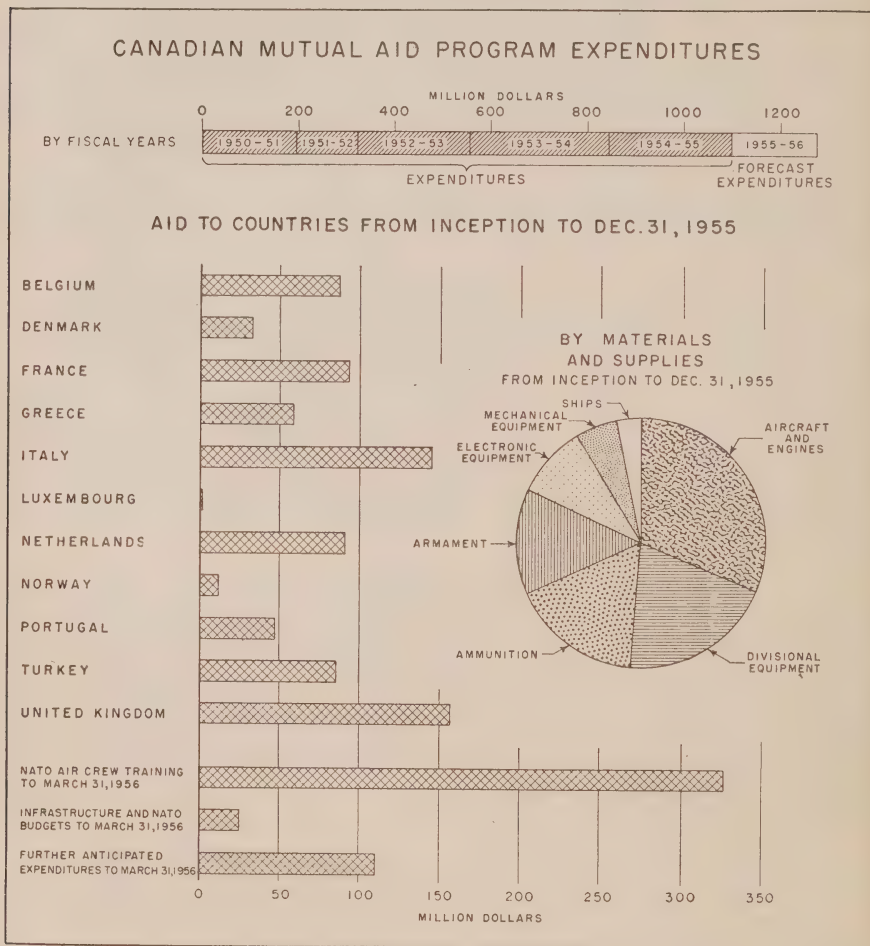

At the December meeting the Council reaffirmed its will to continue to build for peace on solid foundations of unity and strength. Reviewing the defence program of the member countries it recognized that the level of forces, which had increased in strength during the past year, should be maintained as planned. On the basis of recommendations in the Annual Review for 1954 and recognizing that it would be necessary for member countries to support over a long period forces which, by their balanced quality and efficiency, would be a major factor in deterring aggression, the Council adopted firm force goals for 1955, provisional goals for 1956 and planning goals for 1957 with provision for further improvements in training, equipment and effectiveness. The Council also recorded its opinion that the German defence contribution under the Paris Agreements remained an indispensable addition to the defence effort of the West.

The meeting in May 1955 was attended by the Foreign Ministers of member governments and its primary purpose was to mark the entry into NATO of the Federal Republic of Germany and to provide an opportunity for a more comprehensive examination than usual of international political problems of common concern to the alliance. These discussions showed the great value of the Council as a forum for political consultation which enables the member governments to develop their policies on the basis of common principles. The Ministers resolved to continue the policies heretofore followed in building and maintaining the strength and unity of the West, though they welcomed the proposed negotiations with the Soviet Union to find means for resolving outstanding issues.

* June 1, 1954 to May 31, 1955.

Canadian Contributions to NATO.—Canada continued in 1954-55 to support NATO with contributions of armed forces to the unified NATO commands, with end-item assistance to other NATO countries and with financial contributions to common budgets.

The 1st Canadian Infantry Brigade which is stationed in the Soest area of Germany kept its place in Europe alongside the forces of Canada's allies. It is expected that on completion of its two year tour of duty towards the end of 1955 the 1st Brigade will be replaced by the 2nd Canadian Infantry Brigade. The Canadian air contribution of 12 jet fighter squadrons to SACEUR remained unchanged. The Royal Canadian Navy had 43 ships earmarked for the defence of the Canada-United States area and for the protection of convoys under the control of SACLANT.

Between Apr. 1, 1950 and Mar. 31, 1955 arrangements under the Canadian Mutual Aid Program provided for the transfer by Canada of military aid to the non-North American members of NATO to the extent of an estimated total of \$1,100,400,000. The main elements in the program are: (a) training in Canada of aircrew for other NATO countries; (b) transfers of equipment from service stocks or from current production for the Services; (c) direct transfers of equipment from current production; (d) contributions

towards infrastructure programs and NATO budgets. By Dec. 31, 1954, under the NATO aircrew training program, a total of 1,297 pilots and 2,009 navigators from Belgium, Denmark, France, Italy, the Netherlands, Norway, Portugal and the United Kingdom had graduated from training establishments in Canada. An additional 989 trainees were currently undergoing training in early 1955. For 1954-55, Parliament was asked to approve an appropriation of \$257,400,000 for Mutual Aid.

Canada's forecast share of the cost of NATO common infrastructure program for the year ended Mar. 31, 1955 was \$11,500,000. Total Canadian expenditure for NATO Headquarters budgets during the same year was expected to amount to \$1,500,000.

Subsection 4.—Canada and the Colombo Plan

The Colombo Plan for Co-operative Economic Development in South and South East Asia was conceived at the Commonwealth Meeting on Foreign Affairs held at Colombo, Ceylon, Jan. 9-14, 1950. Although the Colombo Plan was initiated by Commonwealth governments it is not exclusively a Commonwealth program. It is designed to assist in the economic development of all countries and territories in the general area of south and southeast Asia.

The Consultative Committee, an intergovernmental body, which meets from time to time to review the progress of the Colombo Plan and to consider policy matters in connection with its implementation, now counts as members Australia, Burma, Cambodia, Canada, Ceylon, India, Indonesia, Japan, Laos, Nepal, New Zealand, Pakistan, the Philippines, Thailand, the United Kingdom (and its territories in the area, such as Malaya, Singapore and Sarawak) and Vietnam, as well as the United States which is also engaged in a substantial program of economic aid in the same region. To develop the technical assistance side of the Plan, a Council for Technical Co-operation has been set up at Colombo, on which Canada is represented. The Technical Co-operation Program though an integral part of the Colombo Plan is designed to supplement the technical assistance activities of the United Nations and the Specialized Agencies in the area.

Up to Mar. 31, 1955 the Canadian Parliament approved annual contributions totalling approximately \$128,000,000 for capital and technical assistance to governments in south and southeast Asia.

Capital assistance has so far been provided to India, Pakistan and Ceylon. The Canadian contribution has consisted primarily of direct assistance to various development projects (e.g., equipment for multi-purpose irrigation and electricity projects, transportation equipment, fishing boats and surveys of resources). It has also included goods required in these countries which the recipient governments have been able to use as a means of raising some of the money needed to meet local costs of development programs (e.g., wheat, flour, copper, aluminum and railway equipment). Canadian aid has been helping these countries in both ways, to develop their economies and raise their standards of living.

Under the Technical Assistance Program up to Mar. 31, 1955 about 259 persons from many countries in the area had been received for training in Canada in a great variety of technical fields and 77 Canadian experts had been employed for service in Colombo Plan countries in such fields as fisheries, refrigeration, marine biology, agriculture, soil erosion, vocational training, accountancy and the maintenance of tractors and agricultural machinery. Equipment for technical training in various fields had also been supplied.

The Consultative Committee on the Colombo Plan held its annual meeting in Ottawa in October 1954. The Canadian delegation was led by the Hon. Walter Harris, Minister of Finance. A published Report* outlines the progress made up to that point and indicates the plans for the future. It contains separate sections describing the activities of each member of the Colombo Plan as either contributing or receiving countries.

The next meeting of the Consultative Committee was scheduled for Singapore in the autumn of 1955.

NOTE.—*The interpretation of the symbols used in the tables throughout the Year Book will be found facing p. 1 of this volume.*

This Chapter presents only a summary of the voluminous data recorded by the Census. More detailed information and extended analyses are published in the Census volumes and reports which are obtainable from the Queen's Printer or the Dominion Bureau of Statistics, Ottawa. A list of such publications and their prices is available on request.

Section 1.—History of the Census

In 1666 Talon, the Intendant of New France, took an official census of the colony for the purpose of measuring the increase in population that had taken place since the founding of Quebec by Champlain in 1608. Thus to that primitive St. Lawrence colony belongs the credit for the first census of population in the modern meaning of the term and the institution of what is today one of the principal instruments of public administration in every civilized community. That enumeration, which recorded a total of 3,215 persons, included the name, age, sex, marital status and occupation of each person in his place of abode. The great Intendant himself carried out a considerable part of the enumeration, "visiting from door to door all the habitations of Mont Réal, Trois Rivières, Cap-de-la-Madeleine, and all places above Quebec". The following year, 1667 the census was repeated and to the same inquiries were added the areas under cultivation and the numbers of cattle and sheep.

Censuses of New France were taken no less than thirty-seven times in all during the period 1666 to 1739, as well as nine partial censuses and many more enumerations from that date to the end of the French régime in 1763. The scope of the census widened even during this early period. Each census brought a few new inquiries until at the end of the French period the census ascertained, along with the original information, the areas under cultivation and under pasture, the production of wheat, barley, oats, peas, corn, flax, hemp, tobacco and the number of horses, cattle, sheep and swine. In addition the numbers of public buildings, churches, grist mills and sawmills were recorded and the numbers of firearms and swords.

* Revised in the Census (Demography) Division, Dominion Bureau of Statistics.

The chief sources of statistics for the first half-century of British occupation were sporadic reports prepared by the colonial governors though censuses of different sections were taken at irregular intervals. There was a census of Canada in 1765 and others in 1784 and in 1790. Censuses of Upper Canada (Ontario) were taken on an annual basis from 1824 to 1842 and for Lower Canada (Quebec) censuses were taken in 1825, 1827, 1829, 1831, 1832, 1842 and 1844. During this period, censuses of New Brunswick, Nova Scotia, the Assiniboine and the Red River District (Manitoba) were also fairly frequent.

The Census Act passed Sept. 18, 1841 was the first legislative attempt to institute a policy of regular census taking. It provided for a census in the year 1842 and every fifth year thereafter but under this Act only a census of Upper Canada was taken. Subsequent legislation provided for a census of Lower Canada in 1842 and a census of the two Provinces in 1848 and 1850. However the Act which provided most effectively for the taking of a periodical census was passed in 1851 and the censuses of 1851-52 and 1861 were carried out under it. In the same years censuses of Nova Scotia and New Brunswick were also taken so that the present decennial census may be said to date from 1851.

The first census following Confederation, that of 1871, was taken under a new Act passed in 1870, an amendment to which in 1879 provided for the taking of a census in 1881 and in every tenth year thereafter. Such decennial censuses have been taken and as the country has progressed economically and government and business administration has become more complex the scope of each successive enumeration has increased. The present legislative authority for the taking of the census is the Statistics Act (R.S.C. 1952, c. 257 and amendment).

The original legal *raison d'être* of the census was to determine representation in the Federal House of Commons. Under the British North America Act it was provided that the first rearrangement of seats in the House should be made on completion of the Census of 1871, a similar readjustment to follow every subsequent decennial census. (The application of the census to this problem is dealt with at pp. 73-74.) But the census of today has far wider uses than to determine electoral representation, important as that purpose is. It constitutes in fact nothing less than a periodical stock-taking of the people—their numbers, geographical distribution, ages, marital status, place of birth, nationality, origin, language, schooling, occupations, earnings, family composition, housing conditions, and so forth. Census data on the population are useful in determining provincial subsidy payments, school grants and other forms of public expenditure where amounts paid are on a per capita basis. Simple counts of the population are also essential in calculating birth, death and marriage rates, production and consumption rates, and many other per capita measures. Census population counts also serve as benchmarks in the making of intercensal estimates of population. At each level of government population figures from the census are regarded as official counts of numbers of persons living in provinces, cities, towns, villages, etc.

Statistics on such characteristics of the population as age, marital status, language, occupation, etc., likewise serve a variety of uses. Age figures for example are required in estimating the costs of social security measures such as family allowances and old age pensions, in estimating schooling needs, in producing life tables, and for a variety of purposes in the study of social and economic problems. Marital status statistics from the census are used to compare the incidence of various diseases among single and married persons, to estimate the proportion of married women in the labour force, to determine the changes taking place in the number of widowed and divorced persons in Canada. Statistics on language and mother tongue are useful to educational authorities, advertising agencies and the foreign language press in the publication and distribution of information in various languages.

Occupation statistics are of value to vocational counsellors in technical schools and employment offices. They are of interest to firms wishing to know what occupational skills may be found in localities where they may be planning to establish branch plants. These examples serve to illustrate the many uses to which population statistics from the census may be put. Similarly, statistics from the censuses of agriculture and housing are of value in the solution of economic and social problems, as well as for more immediate administrative purposes.

The ninth Decennial Census of Canada in 1951 was one of the most significant in the country's history. Coming at the mid-point of the century, it provided a means of measuring Canada's development during the first half of the century. Following a decade of great international upheavals—World War II and the immediate postwar adjustment period—it reflected the widespread economic and social changes that occurred during that period. With the union of Newfoundland and Canada in 1949 it represented Canada's first census since becoming a nation of ten provinces. The coverage of that Census is shown in the following table.

1.—Statistical Summary of the Leading Enumerations of the 1951 Census

Province or Territory	Population	Occupied Dwellings ¹	Occupied Farms		Merchandising and Service Establishments			Fishing Enterprises
			Farms	Area	Retail Trade	Wholesale Trade	Service

¹ Exclusive of hotels, institutions, camps and large lodging houses.

² Included with the Prairie Provinces.

The modern census has become a highly complex administrative and technical operation. Each enumeration has shown a considerable advance over its predecessor in planning, organization, enumeration and processing, as well as in coverage. The 1951 Census marked the introduction of many new techniques—a number of processing operations were decentralized and were performed for the first time in the Bureau of Statistics regional offices located across Canada; mark-sense equipment was used in conjunction with high-speed electronic tabulating machines; and specialized printing processes were employed to speed the release of published reports and volumes. The results of the 1951 Census of Canada are now for the most part contained in the printed record* which will form an important source of reference for many years to come.

In addition to the decennial enumerations for the whole of Canada the spectacular growth of the midwest starting in the 1880's and continuing into the present century necessitated the securing of more frequent population and agricultural information for that portion of the country. In 1886, midway between the decennial censuses, a special census of Manitoba and the then North-West Territories was taken. This was repeated for Manitoba alone in 1896 and in every succeeding ten year period a similar census included Saskatchewan and Alberta which were created provinces in 1905. Legislative authority

* *Ninth Census of Canada 1951*, XI Vols. \$25, Queen's Printer or Dominion Bureau of Statistics, Ottawa.

for these censuses was passed in 1886 for Manitoba and in 1905 for Saskatchewan and Alberta and later embodied in the Statistics Act. The need for this partial census is now not so apparent and provision has been made for its place to be taken by a modified census of population and agriculture for the whole of Canada. Such a census is being taken in 1956.

Section 2.—Growth of the Population

The population history of Canada, from the first census in 1666 when 3,215 persons were enumerated to the 1951 Census when the figure was 14,009,429, reveals an outstanding rate of population growth. Each decade of course contributed to this growth but the ten year periods 1901-11, 1911-21 and 1941-51 merit particular mention. In the decade 1901-11 Canada's population increased by 34·2 p.c., the largest growth in the nation's history. Immigration was the main factor in this gain, 1,800,000 persons having entered the country during the period. Despite World War I with its accompanying population losses through casualties, emigration and the influenza epidemic Canada's population increased by 21·9 p.c. in the 1911-21 decade.

The Census of 1951 showed the population of Canada to be 14,009,429 representing an increase of 2,502,774 or 21·8 p.c. over the 1941 figure of 11,506,655. Newfoundland's entry into Confederation accounted for 361,416 of this increase. Excluding Newfoundland the population in 1951 totalled 13,648,013, an increase of 2,141,358 or 18·6 p.c. over the 1941 population of the nine provinces and the territories. This numerical increase was the largest on record and the percentage increase was exceeded only in the 1901-11 and 1911-21 decades. The population increase in the 1941-51 decade is all the more remarkable when consideration is given to the fact that immigration was greatly restricted during the war years. With the resumption of immigration in the postwar years however Canada had a net gain of about 424,000 in population through immigrant arrivals over the decade. The period was characterized also by high birth rates, and the natural increase was just under 2,000,000 for the ten year period.

2.—Numerical and Percentage Distribution of Population by Province, Decennial Census Years 1871-1951

NOTE.—The populations of the Prairie Provinces in 1906, 1916, 1926, 1936 and 1946 are shown in the 1951 Year Book, p. 131. Intercensal estimated populations from 1867-1904 will be found in the 1936 Year Book, p. 141; from 1905-30 in the 1946 edition, p. 127; from 1931-40 in the 1952-53 edition, p. 143; and from 1941-54 in Table 3, p. 151 of the present edition.

Section 3.—Intercensal Estimates and Movement of Population

Intercensal estimates of the population have many uses. They constitute a base for vital statistics rates, per capita figures of production and trade, and other analyses. More recently they have proved useful for estimates of labour force and other population characteristics of data collected in sample surveys.

Estimates are constructed in the first place for the total population of Canada and for each province. It is a requirement that these be made available about the date to which they apply, June 1 of each year. As final figures on the components of population changes are not ready at that date the numbers of births, deaths and immigrants are partly filled in by extrapolation so that a preliminary figure is secured for the June to May interval. To avoid a cumulative error the calculation in effect starts anew with the latest preceding census for each year's estimates and uses the most up-to-date figures then available. To the census figures are added the births of the intervening years and the deaths are subtracted. Immigrants are added and emigrants are subtracted. On the last item of this calculation there is least information; it is possible to ascertain from United States immigration figures the number of Canadians entering the United States and sometimes the number of those going to the United Kingdom but data are not available for other countries.

The program of population estimates calls for two figures to be given in respect of each year: one based on preliminary data as described above, necessarily involving an extrapolation of birth, death and immigration returns, and the other on final figures subject to no further change. The latter can be made available only when the last item of information has been secured and this last item is the succeeding decennial census. With the release of the 1951 Census totals, the estimates were revised for the decade 1941-51.

Since estimates for successive years are independently calculated back to the latest census, the best estimate of the balance of population change is not obtained by subtracting the figure for one year from that for the year following. Much interest attaches to the year-to-year balance and the following statement is presented, which gives all available data on that point.

Year	Calendar Year Data ¹				Estimated Population as at June 1 ¹
	Births	Deaths	Natural Increase	Immi- gration	
1941.....	255,317	114,639	140,678	9,329	11,490,000
1942.....	272,313	112,978	159,335	7,576	11,637,000
1943.....	283,580	118,635	164,945	8,504	11,778,000
1944.....	284,220	116,052	168,168	12,801	11,929,000

¹ Exclusive of the Yukon and Northwest Territories. Newfoundland included from 1949.

² Subject to adjustment as later data are made available.

3.—Estimates of Population by Province, Intercensal Years 1941-55

NOTE.—At every census the previous post-censal estimates, made at June 1 each year, are adjusted to the newly recorded population figures. Figures for all provinces for 1941 and 1951 and for the Prairie Provinces for 1946 are census figures. Figures for 1867-1904 will be found in the 1936 Year Book, p. 141, for 1905-30 in the 1946 edition, p. 127, and for 1931-40 in the 1952-53 edition, p. 143.

¹ Estimates for Newfoundland prior to union with Canada which took place on Mar. 31, 1949 are not included in Canada totals.

Table 4 shows the natural increase and the total population increase according to the Census for Canada and the provinces in the 1931-41 and 1941-51 decades. The difference between the natural increase and the total increase in population during a decade represents the difference between inward and outward movements, i.e., net migration. The net migration data shown for provinces indicate the net movement of population arising partly from interchange of population between provinces and partly from persons entering and leaving the country.

The traditional movement of population on the North American Continent from east to west has not been apparent in Canadian statistics for recent years. The most spectacular changes are shown in the Prairie Provinces and in British Columbia. The three Prairie Provinces lost by migration about 250,000 people between 1931 and 1941

and somewhat more from 1941 to 1951. British Columbia gained at the rate of about 8,000 a year during the 1930's and at about 23,000 a year during the 1940's. On an absolute basis Ontario received more people than British Columbia but in relation to its larger population this growth was only one-third as important; Quebec's net change was negligible relative to its population; Nova Scotia gained during the 1930's but lost in the 1940's, the Maritime Provinces as a whole losing considerably over the two decades.

4. Numerical Changes in the Population of the Provinces through Migration 1931 to 1941 and 1941 to 1951

Province	Natural Increase		Population Increase according to Census		Net Migration

¹ Excludes Newfoundland but includes the Yukon and Northwest Territories.

Section 4.—Density of Population

The land area and density of the population per square mile is given by province in Table 5 for the census years 1921-51. It will be noted that the figures for 1951 include the Province of Newfoundland and this fact should be kept in mind in comparisons with earlier censuses.

5.—Land Areas and Density of Population by Province, Decennial Census Years 1921-51

¹ Includes Labrador. ² Calculated on the basis of 1,970,385 sq. miles which excludes the land area of Newfoundland. ³ Includes Newfoundland. ⁴ Total includes 435 members of the Royal Canadian Navy recorded separately in 1921. ⁵ Calculated on the basis of 3,429,169 sq. miles which excludes the land area of Newfoundland.

Section 5.—Rural and Urban Population

Before 1951 the population residing within the boundaries of all incorporated cities, towns and villages of a province was classified by the Census as urban and the remainder as rural. Since the laws governing incorporation vary among provinces there was no uniform line of demarcation between the rural and urban population throughout Canada. In the 1951 Census the aggregate number of residents within a given area rather than provincial legal status was the main criterion for the rural-urban classification. The population residing in cities, towns and villages of 1,000 or over, whether incorporated or unincorporated, as well as the population of all parts of census metropolitan areas, was defined as urban and that outside such localities as rural.

Table 6 presents the rural and urban population, by province or territory, for 1951. The rural is further classified by farm and non-farm residence and the urban by size of locality.

6.—Rural Population classified by Farm and Non-farm and Urban Population classified by Size Group by Province, Census 1951

¹ Excludes 84,264 persons living on farms in localities classed as urban, parts with fewer than 1,000 population.

² Includes a few metropolitan area

Section 6.—Population of Counties and Census Divisions

Population totals for counties and census divisions for census years 1901-51 are given in the 1952-53 Year Book, pp. 137-141. Further details, including populations of the subdivisions of counties, may be found in *Ninth Census of Canada 1951*, Vol. I.

Section 7.—Population of Incorporated Urban Centres

The growth of Canadian cities with populations of over 30,000 from 1941 to 1951, together with the years of their incorporation as cities, is shown in Table 7. All incorporated cities, towns and villages having populations of 1,000 or over in 1951 are listed in Table 10.

7.—Incorporated Cities with Populations of over 30,000 at the 1951 Census and Comparable Data for 1941

NOTE.—Incorporated cities in which a Board of Trade exists are indicated by an asterisk (*), and those in which there is a Chamber of Commerce by a dagger (†).

¹ Census taken by the Newfoundland Government in 1945; 1941 figure not available.

For census purposes, metropolitan areas have been established for groups of urban communities that are in close economic, geographic and social relationship. The total population of each of the census metropolitan areas in 1951, with the comparable figure from the 1941 Census covering the same area as in 1951, is shown in Table 8. In this table the metropolitan area has been named after the largest city of each urban group.

Section 8.—Sex and Age Distribution

Sex.—The sex distribution of the Canadian people has been characterized since early colonial times by a preponderance of males although this condition has been greatly modified in more recent years. In 1666 during the early years of settlement by French immigrants 63·3 p.c. of the population were males. In 1784 when British immigration to Canada was commencing there were 54,064 males and 50,759 females and by the middle of the nineteenth century there were 449,967 males to 440,294 females in Lower Canada and 499,067 males to 452,937 females in the more newly settled Upper Canada. Since Confederation the newer sections of Canada—the west and the northwest—have shown the greatest excess of males.

From 1871 to 1941, for Canada as a whole, the proportion of males never dropped below 51 p.c. of the total population whereas for Western Canada it varied between 53 p.c. and 59 p.c. By 1951 however the proportion of males to the total population had dropped to 50·6 p.c. for Canada as a whole.

11.—Sex Distribution of the Population by Province, Decennial Census Years 1921-51

NOTE.—Figures for the Censuses of 1871, 1881, 1891, 1901 and 1911 are given in the 1948-49 Year Book, p. 150.

¹ Includes 485 members of the Royal Canadian Navy recorded separately.

Age.—The age distribution of a population is fundamental to most, if not all, other analyses, for the age factor influences employment, marriage, birth rates and death rates, education, immigration, criminology and a multitude of events and activities that are of great importance in the national life.

Immigration has a strong influence on age distribution: it does not directly affect the very young sections of the population except to a small degree, but it immediately affects the age groups between the 'teens' and the 'twenties' and its effects are carried to the older groups as time goes by. Thus the influence of the very heavy immigration of the early years of the century (1900-11) is indicated by the fact that in 1901, 175·9 persons per 1,000 of the total population were in the age group 20-29 years and 131·3 persons per 1,000 in the group 30-39 years; a decade later 190·7 per 1,000 were in the former group and 142·9 in the latter. Immigration slowed down very decidedly after the outbreak of war in 1914 and the influence of these earlier accretions to the population has crept through the upper age groups year by year until it has now reached those of the population in their 'fifties'.

Between 1931 and 1941 a more pronounced general ageing of the population is shown, a result of almost non-existent immigration and a lower birth rate—factors that were emphasized during the depression years. In 1921 the number per 1,000 of total population between 40 and 59 years of age was 183; it was 201 in 1931 and 209 in 1941. Greater proportional increases however are shown by the group 60 years of age or over; this group represented 75 per 1,000 of the total population in 1921, 84 in 1931 and no less than 102 per 1,000 in 1941.

In 1951 there were 203·2 persons per 1,000 of total population between 40 and 59 years of age and 113·7 in the group 60 years of age or over. There were 222·7 persons per 1,000 of total population in the under 10 years of age group in 1951 as compared with 182·3 in 1941, 212·7 in 1931 and 240·0 in 1921.

Table 12 shows the population of Canada classified by five year age groups and sex for the census years 1931, 1941 and 1951. The provincial distribution from the 1951 Census by specified age groups is shown in Table 13.

Section 9.—Marital Status

Next to the sex and age distribution of a population, that of marital status is probably most fundamental from a vital, economic and social viewpoint. The number of married females between 15 and 45 years of age is a most significant factor in the fertility of a population; if the proportion of females in this group is small the expected proportion of births will also be small. In 1951, 64.0 p.c. of all married females were in the age group 15-44 as compared with 61.2 p.c. in 1941 and 63.5 p.c. in 1931. This indicates a resumption of conditions favourable to the birth rate that prevailed from 1871 to 1921 but was arrested temporarily during the period of world-wide depression.

Although Canada has more single than married persons, information from the 1951 Census shows that the nation's married population increased more than twice as fast as the single population in the decade between 1941 and 1951. With a total population increase of nearly 22 p.c. the number of single persons in Canada increased by 13.5 p.c., married by 32.2 p.c., widowed by 22.5 p.c. and divorced by 128.0 p.c. The entry of Newfoundland into Confederation accounted for 3.3 p.c. of the increase in single persons, 2.9 p.c. in married and widowed persons combined and 0.5 p.c. in divorced persons. Other striking statistics of marital status are the excess of married males over married females (largely owing to a preponderance of male immigrants whose wives had yet to join them), the great preponderance of widows compared with widowers and the large and increasing number of divorced persons.

Section 10.—Origins

A population composed of diverse racial stocks gives rise to political, economic and social problems quite different in nature from those of one with a small admixture of foreign elements although, to the extent that certain racial stocks are more readily assimilated than others, the problems are mitigated. It is equally true that the different educational, moral, economic, religious and political backgrounds of a people of mixed origins lend variety and diversity to the national life.

The two basic stocks of the Canadian people are the French and the English: historically the French is much the older and excepting at the time of the 1921 Census has always exceeded in numbers any one of the basic British stocks.

For purposes of the census a person's origin or cultural group is traced through his father. For example if a person's father is German and his mother Norwegian the origin is entered as "German". Wherever possible the origin of a person is established by asking the language spoken by the person or by his paternal ancestor when he first came to Canada.

15.—Origins of the Population, Census Years 1931, 1941 and 1951

NOTE.—Figures for the Decennial Censuses 1871-1921 are given in the 1948-49 Year Book, p. 154.

Section 11.—Religious Denominations

At each census the numbers of persons attached to any religious denomination, as reported by the persons enumerated, have been recorded. The distribution of the principal denominations for the census years 1931, 1941 and 1951 is given in Table 16.

16.—Principal Religious Denominations of the Population, Census Years 1931, 1941 and 1951

NOTE.—More detailed figures for the Decennial Censuses 1871-1921 are given in the 1948-49 Year Book, p. 155.

¹ Includes "Hutterite".² Includes "Other Greek Catholic".

Section 12.—Countries of Birth

The census collects information on the country of birth of immigrant arrivals in Canada and province of birth of Canadian born. For persons born outside of Canada the country of birth, as constituted at the date of the census, is recorded. Table 17 gives the total population by countries of birth for the census years 1931, 1941 and 1951.

17.—Countries of Birth of the Population, Census Years 1931, 1941 and 1951

NOTE.—Figures for the Decennial Censuses 1871-1921 are given in the 1948-49 Year Book, p. 158.

¹ Includes the 26 counties of Ireland in 1931 and 1941. ² Includes Lithuania and Ukraine. ³ Includes Denmark, Iceland, Norway and Sweden. ⁴ Includes Austria, Czechoslovakia, Hungary, Yugoslavia, Poland and Roumania. ⁵ Includes "birthplace not stated".

Section 13.—Languages and Mother Tongues

Official language is not to be confused with mother tongue. Mother tongue is the language a person first spoke in childhood and still understands; official language (a term used herein for census purposes) refers only to the English and French languages. The numbers of persons speaking one, both or neither of the official languages are given in Table 18, classified by province.

18.—Population Speaking One, Both or Neither of the Official Languages by Province, Census 1951

NOTE.—Infants are classed as speaking the language of the home.

Province or Territory	Population Speaking—			
	English Only	French Only	English and French	Neither English nor French
	No.	No.	No.	No.
Newfoundland.....	356,377	153	3,990	896
Prince Edward Island.....	88,743	914	8,745	27
Nova Scotia.....	595,257	7,462	39,524	341

Section 14.—Dwellings, Households and Families

A fairly complete summary of the principal statistics on dwellings, households and families recorded at the 1951 Census is given in the 1954 Year Book, pp. 139-145. More detailed information may be found in Vol. III of the 1951 *Census*. The subject is only briefly covered in this Section.

Dwellings and Households.*—The 1941 Census of Housing was based on a 10 p.c. sample of dwellings situated within the nine provinces. For the 1951 Census the size of the sample was increased to 20 p.c. and the coverage included Newfoundland but, as in 1941, did not extend to the Yukon and Northwest Territories. For comparison purposes Newfoundland is omitted from the 1951 figures in Table 20. The number of occupied dwellings in Newfoundland in 1951 totalled 70,980 as against a 1945 figure of 62,293.

Table 20 shows that the increase in the number of dwellings during the 1941-51 decade was 11 p.c. higher than the increase in population thus reducing the number of persons per dwelling from 4.3 to 4.0. Definitional changes between 1941 and 1951 are partly responsible for the relatively larger increase in dwellings particularly of the apartment and flat type. Since owned dwellings increased by 49.1 p.c. and rented dwellings by only 4.2 p.c., it would appear that many people who were tenants in 1941 have since bought homes and that most new homes were built for owners rather than for tenant occupancy.

* 1951 Census definitions are briefly as follows: **DWELLINGS**.—A *Dwelling* is defined as a structurally separate set of living premises with private entrance from outside the building, or from a common hallway or stairway inside. A *Single Detached Dwelling*, commonly called a single house, is a house containing one dwelling unit and completely separated on all sides from any other building or structure. *Apartments and Flats* include dwelling units in apartment blocks, suites in duplexes or triplexes, suites in structurally converted houses, living quarters located in business premises, janitor's quarters in schools, etc. In determining the number of *Rooms* in a dwelling, only those used or suitable for living purposes including rooms occupied by servants, lodgers, or members of lodging families are counted. **HOUSING**.—A *Household* is a person or group of persons occupying one dwelling unit, the number of households thus equalling the number of occupied dwellings. Every person must be a member of some household, whether it consists of a family group with or without servants, lodgers, etc., a group of unrelated persons sharing a dwelling, or one person living alone. A dwelling is classed in need of *Major Repair* if it possesses any one of the following defects: sagging or rotting foundations indicated by cracked or leaning walls; faulty roof or chimney; unsafe outside steps or stairways; interior badly in need of repair. A *Crowded Dwelling* (or Household) is defined as one in which the number of persons exceeds the number of rooms occupied.

¹ Exclusive of hotels, institutions, camps, etc. miscellaneous types.² Includes auto-trailers, houseboats, tents and other

The statistics of Table 21 reflect the high level of prosperity throughout the decade in both urban and rural areas. In 1951 a higher percentage of homes had indoor plumbing, electricity and furnace heating, and had such conveniences as mechanical refrigerators, electric vacuum cleaners, telephones, radios, and passenger automobiles. There was a sharp drop in the number of homes needing major repair. Washing machines are not shown in Table 21 because there are no comparable 1941 figures but in 1951, 72.5 p.c. of the dwellings possessed a powered type of washing machine. Though much of this advance may be attributed to general prosperity, part of the explanation of the trend is to be found in the increasing urbanization of the Canadian population and the availability of modern conveniences to rural areas.

¹ For cities of 30,000 or over only. dwellings.² For exclusive use of household.³ Includes "rent-free"

Families.*—The number of families increased at a greater rate during the 1941-51 decade than the general population with the result that the average number of persons per family dropped from 3.9 to 3.7. Table 22 shows that families with no children or with one or two children increased proportionately at the expense of families with three or more children. It is also interesting to note that the increase in number of families was greater than the increase in the number of children in families. This does not necessarily indicate a trend in the birth rate. Other factors have an important bearing, such as the ageing of the population, the great increase in the marriage rate during the years just prior to the 1951 Census, and the tendency for young people to leave the family home for employment elsewhere.

* For census purposes, a *Family* consists of husband and wife (with or without children) or a parent with an unmarried child (or children) living together in the same dwelling. Unmarried sons and daughters under 25 years of age and living with their parents are classed as *Children* as well as wards and guardianship children under 21 years of age. Unmarried sons and daughters, 25 years of age or over, living with their parents are counted as family members but not as children.

Section 15.—The Blind and Deaf Population

Information was obtained in the 1951 Census for totally blind or deaf persons. Persons blind in one eye for example were not recorded as blind and partially deaf persons, such as those able to hear with the help of a mechanical aid, were not included. Table 23 shows the number and proportion of totally blind and deaf persons per 10,000 population in each province and territory. More detailed information on this subject is contained in Vol. II of the 1951 Census.

23.—Number of Blind and Deaf Persons and Proportion per 10,000 Population by Province 1951

Section 16.—The Indians and Eskimos of Canada

The Indians.*—Entry of native tribes into North America probably began as early as 15,000 years ago according to the findings of archaeologists. It is believed that roving bands of hunters, driven from their lands in northeastern Asia, crossed into North America by way of Bering Strait. Ethnic origins of the Indians appear to have varied. Though differences in language were many and varied somewhat from tribe to tribe religious background and traditions seemed to stem from practically the same source.

There are ten linguistic groups of Indians in Canada of which four are east of the Rocky Mountains—Algonkian, Athapaskan, Iroquoian and Siouan—and six are west of the Rockies—Kootenayan, Salishan, Wakashan, Tsimshian, Haida and Tlinkit. Indians of Algonkian stock are the most numerous and are scattered throughout the area from the Atlantic seaboard to the Rocky Mountains. Included in the Algonkian stock are such tribes as the Micmacs of the Maritimes, the Montagnais of Quebec and the Ojibwas, Crees and Blackfeet who live in the Prairie Provinces. The Iroquoian stock, which includes the Hurons, is found mainly in Ontario and Quebec, while tribes of Sioux are located in the Prairie Provinces. The Northwest and Yukon Territories are the usual homelands of the Athapaskan.

According to the 1951 Census there were 155,874 persons of Indian origin in Canada, distributed by province and sex as follows:—

<i>Province</i>	<i>Male</i>	<i>Female</i>	<i>Total</i>	<i>Province</i>	<i>Male</i>	<i>Female</i>	<i>Total</i>
Newfoundland.....	184	174	358	Saskatchewan.....	11,265	10,985	22,250

Manitoba.....	10,642	10,382	21,024	CANADA.....	79,343	76,531	155,874

These figures include all persons with a paternal ancestor of Indian race, many of whom have long been assimilated and have lost their identity as Indians. The number of persons considered as Indians under Indian legislation is placed (1955) at 151,558. They are divided into about 600 Bands and live on 2,223 reserves set aside for their use and benefit.

Administration.—The primary function of the Indian Affairs Branch, under the Citizenship and Immigration Act and the Indian Act, is to administer the affairs of the Indians of Canada in a manner that will enable them to become increasingly self-supporting and independent. The functions of the Branch include the management of Indian reserves and surrendered lands, trust funds, welfare projects, relief, family allowances, education, descent of property, rehabilitation of Indian veterans on reserves, Indian treaty obligations, enfranchisement of Indians and other matters.

The Indian Act currently in effect was drafted following inquiry into Indian affairs by a Special Joint Committee of the Senate and the House of Commons during 1946, 1947 and 1948 and subsequent conferences with representative Indian groups. Proclaimed Sept. 4, 1951, the new Act succeeds an Act that was first consolidated in 1876 and amended from time to time.

* Prepared in the Indian Affairs Branch, Department of Citizenship and Immigration, Ottawa.

The Indian Act provides a measure of self-government on reserves through Band councils chosen according to tribal custom or under an elective system of secret ballot. The various expenditures of Band funds with few exception require the consent of the Band council, comprising a chief and councillors. The right to vote in Band elections and other votes is extended to all members of a Band, men and women, who have reached the age of twenty-one years. A number of Indian women have been elected to office since the new Act came into force. Secrecy of voting has been provided under election regulations. The powers of Band councils to make by-laws correspond in a general way with those exercised by councils in a rural municipality.

Indians who are veterans of World Wars I or II and their wives may vote in federal elections. Indians who live off the reserve, under certain circumstances, also have the right to vote while Indians who live on the reserve may vote if they waive exemption to taxation on personal property such as earnings or other incomes received on the reserve. Indians may sue and be sued subject to provisions of the Indian Act which exempts from seizure real and personal property held on the reserve.

Enfranchisement, the removal of all legal distinction between Indians and other members of the community, is provided for under the Indian Act. An enfranchised Indian is no longer subject to the provisions of the Act. In order to facilitate enfranchisement of Indian Bands agreements may be entered into with provincial or municipal authorities to provide financial assistance to indigent, infirm, or aged members of the enfranchised Band.

The nomadic existence followed by Bands of Indian hunters is gradually giving way to a more stable way of life. Many Indians are profitably engaged in the fishing industry on the British Columbia coast; Indians across Canada are being encouraged to engage in agricultural pursuits and are prominent in many other trades and occupations. For example the reputation of the Indians from the Caughnawaga Reserve, near Montreal, as skilful structural steel workers is known throughout North America.

The Indian Affairs Branch takes a census of the Indian population under its jurisdiction at five-year intervals. The figures for the 1955 Census are given in Tables 24 and 25.

Education.—The proportion of Indians who have become satisfactorily adjusted to modern conditions is of course greater among those who have taken full advantage of the Federal Government's educational program. Residential schools are available to Indian children from broken homes, orphans or those who, because of isolation or the nomadic way of life of their parents, would otherwise be unable to attend school. For children who can live at home the Federal Government operates day schools in Indian communities. Alternatively, where conditions are favourable, arrangements are made with local educational authorities for Indian children to attend non-Indian schools. An increasing number of Indian children in the elementary grades have been admitted to schools where other children are enrolled and the majority of Indian children attending secondary school and college classes are educated in association with non-Indians. The Federal Government pays the charges for school fees and books, necessary transportation and, for some students who must live away from home, part or all of the cost of room and board.

Similar assistance is given to Indian young people to encourage them to obtain vocational and professional training. Of those who have qualified as school teachers 63 are now serving in Indian schools. Indians have qualified in medicine, dentistry, nursing, agriculture and other professions. Preference in appointment to positions in the Indian service is given to qualified Indians.

In the year ended Mar. 31, 1955 there were 474 Indian schools in operation, comprising 69 residential schools, 368 regular day schools, 24 seasonal schools and 13 hospital schools. The enrolment in residential schools was 10,501 and in all other schools, 17,947. Enrolment by province was: P.E.I., 42; N.S., 633; N.B., 433; Que., 2,348; Ont., 6,298; Man., 4,155; Sask., 3,891; Alta., 3,917; B.C., 5,836; Y.T., 278; and N.W.T., 617.

27.—Enrolment and Average Attendance at Indian Schools, Years Ended Mar. 31, 1946-55

Year	Residential Schools		Day Schools		All Schools

1954	11,090	9,516	17,084	14,541	28,174	24,057	85.4
1955	10,501	9,878	17,947	16,254	28,448	26,132	91.9

In addition to pupils in Indian schools there were 2,892 Indian children enrolled in elementary grades in provincial and private schools and 1,185 in secondary schools, making a total enrolment of Indians in educational classes of 32,525. In the year ended Mar. 31, 1955 there were 1,849 Indians receiving secondary and higher education.

Welfare.—During 1954, 21,728 Indian families received \$3,995,708 in Family Allowances on behalf of 65,839 children. These payments contributed substantially to a better balanced diet and better clothing for Indian children. Approximately \$3,000,000 is paid annually to Indians in the form of blind persons' allowances, old age assistance and old age security payments. When necessary the Government provides direct relief assistance to Indians in the form of food, fuel, clothing and household equipment. The Indian Affairs Branch also makes arrangements for private foster-home and institutional placement of children, juvenile delinquents, cripples and unemployable and aged adults. Assistance is also provided for unmarried mothers and for the rehabilitation of disabled Indians. Increasing emphasis is being placed on the importance of the suitable placement of children requiring protection and upon the importance of preventive work in the field of juvenile delinquency.

Policy and procedure were continued regarding provision of special foods as a preventive measure against tuberculosis. Apart from the humanitarian aspect the policy has as its aim a reduction in the number of new cases. A well nourished body is not an easy victim of disease.

Improvement in housing conditions has been achieved recently through the efforts of the Indians themselves as a result of expenditures from government appropriations, from Indian Band funds, and through Veterans' Land Act benefits. Costs of house repairs during the year ended Mar. 31, 1954 amounted to \$254,902 and the value of new houses built on the various reserves was estimated at \$1,539,442. Revolving Fund loans are available for the purchase of farm machinery, implements, gas and oil, fencing materials, seed grain, livestock and similar essentials, and also for payment of wages and repairs to buildings and vehicles.

Fur Conservation.—During 1954 the fur conservation program, undertaken in co-operation with the various provinces, was continued. Approximately 157,291 beaver pelts valued at \$1,385,920 were taken in Saskatchewan, Manitoba and Ontario. In

addition, about 1,469,000 muskrats valued at \$1,312,000, were trapped in Manitoba and Saskatchewan. Indian participation in the three provinces from the trapping of these fur-bearers was valued at about \$1,430,000. In Quebec nine fur preserves with a total area of approximately 150,000 sq. miles are set aside exclusively for Indian trappers under joint management by the Indian Affairs Branch and the Quebec Department of Fish and Game. The six areas in production during 1954 produced over 17,000 beaver which brought more than \$215,000 to the Indian trappers.

Eight full time supervisors are employed across Canada to assist the Indians to derive the fullest possible benefits from hunting and trapping.

The Eskimos.*—The Eskimos are only a fragment of the total population of Canada numbering, according to the 1951 Census, only 9,733 persons. However they are part of the human resources of the country and as such are entitled to the benefits of Canadian citizenship and to assistance in adapting themselves to changing conditions. They, together with the Indians, represent the original inhabitants of Canada and their ingenuity and resourcefulness are illustrated by the fact that they have maintained their existence against a harsh unrelenting climate in a region where food, being almost entirely fish or animal, requires great skill to obtain and is most unpredictable in its availability. Advancing civilization has however brought many problems to Canada's northernmost citizens who have been literally translated from the Stone Age to the Atomic Age in a period of 40 to 50 years, and to these problems the Federal Government has been giving increasing attention.

The Northern Administration and Lands Branch of the Department of Northern Affairs and National Resources is responsible for the administration of Eskimo affairs. The Department of National Health and Welfare is responsible for health and medical services. Royal Canadian Mounted Police detachments throughout the north undertake field duties for both Departments. In fact the problems involved in looking after a sparse Eskimo population scattered over about 900,000 sq. miles of territory require the continuous co-operation of all northern inhabitants—teachers, missionaries, traders, doctors, nurses, radio operators and weather station personnel. Administrative contact is maintained by radio and through the Eastern Arctic Patrol which carries representatives of the Administration and other government departments on an annual inspection tour. Officers of the Administration also make periodic visits to Arctic posts by air.

Family allowances are paid to most Eskimos in kind from a list designed to supplement rather than to supplant the normal native diet. Eskimos also enjoy the full benefits of old age security and old age assistance payments and of allowances for blind persons.

Missions assisted by Government grants operate hospitals at Aklavik, Chesterfield Inlet and Pangnirtung and the Department of National Health and Welfare has nursing stations at Coppermine, Fort Chimo, Coral Harbour, Port Harrison, Cape Dorset and Lake Harbour. Tuberculosis and other medical surveys are carried out from year to year and treatment where necessary is provided either at the hospitals within the territory or at larger institutions outside.

An Arctic Division has been established by the Department of Northern Affairs and National Resources to study and deal expressly with Eskimo problems. The Division has the benefit of the advice of a continuing advisory committee composed of representatives of organizations, government and private, concerned with the Eskimos. Efforts are being made to encourage self-sufficiency of the Eskimo by better utilization of the existing resources of the country and the development of small local industries such as whaling, fishing, boat-building, manufacture of clothing, eiderdown collecting and art handicrafts. Eskimos in overpopulated or depleted areas are being encouraged and assisted to move to areas where game is more plentiful or where employment may be found. A fund has been established from which loans may be made to assist Eskimos to carry out approved projects for the betterment of their economy.

* Prepared in the Editorial and Information Division, Department of Northern Affairs and National Resources, Ottawa. See also the special article "The Northland—Canada's Challenge", pp. 22-32 of the 1955 Year Book.

Since 1945 the Government has built eight schools primarily for Eskimo children. They are located at centres spread from the Mackenzie delta in the west to northern Quebec—Aklavik, Tuktoyaktuk, Coppermine, Chesterfield Inlet, Coral Harbour, Cape Dorset, Port Harrison and Fort Chimo. Missions assisted by government grants also operate schools in many Eskimo settlements as well as two industrial homes, one at Chesterfield Inlet and the other at Pangnirtung, where aged and physically handicapped Eskimos are cared for. Considerable attention has been given in recent years to the study and conservation of the wildlife resources upon which the Eskimo depends for his livelihood. Game preserves have been established where only natives may hunt and trap and encouragement is given to the observance of hunting practices designed to conserve the supply of game and fish.

Section 17.—Statistics of World Population

World population figures given in Table 28 are from the United Nations *Population and Vital Statistics Reports* for April 1955 and except as otherwise noted are official mid-year estimates for 1953. The area figures are from the United Nations *Statistical Yearbook, 1954*.

¹ Inhabited and cultivated territory: 13,442 sq. miles. ² Latest official estimate. ³ Comprising Chad, Gabon, Middle Congo and Ubangi-Shari. ⁴ Comprising Dahomey, French Guinea, French Sudan, Ivory Coast, Mauritania, Niger, Senegal and Dakar, and Upper Volta. ⁵ *De jure* population. ⁶ Includes Alhucemas, Ceuta, Chafarinas, Melilla and Peñon de Velez de la Gomera. ⁷ Includes Annobon, Corisco Elobeyes, Fernando Pó and Rio Muni. ⁸ Northern Zone only. Population of Southern Zone approximately 13,000. ⁹ Unofficial estimate. ¹⁰ Excludes Canal Zone shown separately. ¹¹ Includes Aruba, Bonaire, Curaçao, Saba, St. Eustatius and part of St. Martin. ¹² Civilian population only. ¹³ *De jure* population, including U.S. armed forces stationed in the area. ¹⁴ Includes St. Croix, St. John and St. Thomas. ¹⁵ Excludes Indian jungle population. ¹⁶ Excludes Karikal, Mahé, Pondichéry and Yanam which became part of India on Nov. 1, 1954 (population estimated at 323,000 in 1952). Includes Kashmir-Jammu (area 92,776 sq. miles, population estimated at 4.4 millions at Mar. 1, 1951) of which the political status is not yet determined. ¹⁷ Excludes Kashmir-Jammu, Gilgit, Baltistan, Junagadh and Manavadar and large river areas in East Bengal. ¹⁸ Excludes nomads and semi-nomads estimated at 288,400 in 1945. ¹⁹ Southern part of Malay Peninsula excluding Singapore. ²⁰ Includes Singapore Island, Christmas and Cocos-Keeling Islands. ²¹ Includes islands of the Ryukyu group south of the 29th parallel of N. latitude. ²² Excludes the Saar shown separately. ²³ Democratic Republic of Germany. ²⁴ Federal Republic of Germany. ²⁵ Land area only. ²⁶ Includes the Azores and Madeira Islands. ²⁷ Includes the Balearic and Canary Islands. ²⁸ Excludes Channel Islands and Isle of Man shown separately. ²⁹ Includes armed forces overseas but excludes Commonwealth and foreign forces in the country. ³⁰ Excludes former Yugoslav Zone of Territory of Trieste which became part of Yugoslavia in October 1954, population estimated at 73,500 in 1940. ³¹ Inhabited only during winter season. ³² Includes Austral, Gambier, Marquesas, Rapa, Society and Tuamotu Islands. ³³ Includes the Carolines, Marianas and Marshall Islands. ³⁴ Inhabited dry land area only.

Estimated Population of the World by Continents.—The statement below, published by the United Nations, presents estimates of the 1953 mid-year population by continental divisions (except USSR). These continental totals are not always the sum of the estimates for individual countries given in Table 28 because wherever it was considered necessary adjustments have been made in order to arrive at the most reasonable estimates under existing circumstances. The world total must be regarded as only an approximate estimate, the data for Africa and Asia being subject to considerable error.

Africa.....	208,000,000
North America.....	229,900,000
South America.....	118,100,000
Asia (exclusive USSR).....	1,307,000,000
Europe (exclusive USSR).....	403,100,000
Oceania.....	13,900,000
WORLD TOTAL ¹.....	2,493,000,000

¹ Includes a Dec. 31, 1953 estimate for USSR (213,000,000) and the latest (1948) official estimate for China.

SECTION 2. IMMIGRATION STATISTICS.....	180	SECTION 2. CANADIAN CITIZENSHIP STATISTICS.....	193
SECTION 3. EMIGRATION.....	190		

NOTE.—The interpretation of the symbols used in the tables throughout the Year Book will be found facing p. 1 of this volume.

PART I.—IMMIGRATION AND EMIGRATION

The history of immigration is given briefly in the 1948–49 Year Book at pp. 172–173 and a special article in the 1955 Year Book at pp. 164–166 gives an account of immigration in the postwar years 1945–54.

Section 1.—Immigration Policy and Administration*

Admission of Immigrants.—Immigrants are brought to Canada through a flexible immigration policy administered for the Federal Government by the Immigration Branch of the Department of Citizenship and Immigration.

Regulations established by the authority of the Immigration Act permit the admission to Canada, as immigrants, of British subjects by birth or naturalization in the United Kingdom, Australia, New Zealand and South Africa, citizens of Ireland, citizens of France born in France or in the Islands of St. Pierre and Miquelon and citizens of the United States of America provided they are of good health and character and have sufficient means to maintain themselves until they are established in this country. Certain relatives of legal residents of Canada may also be admitted and in addition large numbers of immigrants are settled in Canada through the pursuit of an active policy of selection of individuals found to be suitable and desirable in terms of social, economic and labour conditions in this country. Selected immigrants must be of a type that will be integrated

* Revised in the Immigration Branch under the direction of Laval Fortier, Deputy Minister, Department of Citizenship and Immigration, Ottawa.

readily into the community and will be able to assume the duties and responsibilities of Canadian citizenship within a reasonable time after admission. The immigration of Asians to Canada is covered by special procedures.

To implement the regulations the Immigration Branch maintains examining offices at twenty-one overseas posts: at London, Liverpool, Glasgow, Belfast and Dublin; and at Paris, Brussels, Berne, The Hague, Oslo, Copenhagen, Stockholm, Helsinki, Hanover, Karlsruhe, Vienna, Rome, Athens, Tel Aviv, New Delhi and Hong Kong. Personnel at these posts are advised continuously of economic conditions and settlement possibilities in Canada and, through a system of rotation and training, are returned to Canada from time to time for tours of study which enable them to keep up with developments. Specially trained officers are directly engaged in placement and settlement work in Canada and close liaison is maintained between overseas posts and the various immigration offices in Canada. There are 345 ports of entry on both coasts and along the International Boundary to handle the immigration movement and the heavy tourist traffic.

Administration.—The responsibility for all immigration matters under the provisions of the Immigration Act rests with the Minister of Citizenship and Immigration. The Immigration Branch, one of the four branches which compose the Department of Citizenship and Immigration, administers this Act. Headquarters of the Immigration Branch is at Ottawa.

A primary objective of administration is to assist immigrants to become settled quickly and satisfactorily in the Canadian community. The Federal Government continues its interest in them through the work of the Immigration Branch Settlement Service, the Canadian Citizenship Branch and the Canadian Citizenship Registration Branch of the Department of Citizenship and Immigration and the National Employment Service of the Department of Labour. Liaison is maintained between the Federal Government and provincial authorities and private organizations with a view to co-ordinating the efforts of each in immigrant settlement.

Section 2.—Immigration Statistics

The numbers of immigrant arrivals in Canada year by year from 1910 to 1954 are shown in Table 1 and Tables 2 to 8 provide statistical analyses of the content of the immigration movement in recent years. The numbers of persons refused admission at ports of entry and those deported from Canada during 1952 to 1954 are given in Table 9.

During the period 1910 to 1954, 4,561,162 immigrants were admitted to Canada. The annual influx ranged from a high of 400,870 in 1913 to a low of 7,576 in 1942, the average yearly intake for the period being 101,357. The total number of immigrant arrivals in the postwar period 1946 to 1954 was 1,112,373, representing an average of 123,599 a year. The fluctuations in immigration caused by national and international conditions are clearly visible in Table 1.

1.—Immigrant Arrivals 1910-54

NOTE.—Figures for 1852-93 are given in the 1942 Year Book, p. 153 and for 1894-1909 in the 1948-49 edition, p. 175.

Year	Arrivals	Year	Arrivals	Year	Arrivals	Year	Arrivals	Year	Arrivals

¹ In both Europe and Asia.

² Includes U.S.A. citizens on permit but applying for permanent residence.

Sex, Age and Marital Status.—In the ten year period 1945 to 1954 adult males comprised 40·4 p.c. of the immigrant arrivals, adult females 34·7 p.c. and children under 18 years of age the remaining 24·9 p.c. Without relation to age 53·5 p.c. of the newcomers were males.

3.—Sex Distribution of Immigrants as Adult Males, Adult Females and Children 1945-54

NOTE.—Figures from 1930 are given in the corresponding table of previous Year Books beginning with the 1946 edition.

Year	Adult Males	Adult Females	Under 18 Years		Total
			Males	Females	
	No.	No.	No.	No.	No.
1945.....	4,259	11,620	3,442	3,401	22,722

1947.....	27,281	24,787	6,154	5,905	64,127
1948.....	52,986	45,191	14,104	13,133	125,414
1949.....	39,044	32,957	12,118	11,098	95,217
1950.....	30,700	24,172	10,287	8,753	73,912
1951.....	95,818	53,239	24,348	20,982	194,391
1952.....	66,083	53,443	23,766	21,206	164,498
1953.....	68,269	56,425	23,153	21,021	168,868
1954.....	64,551	51,690	19,980	18,006	154,227

In 1954, 79.6 p.c. of the males arriving and 77.2 p.c. of the females were 15 years of age or over as compared with 78.2 p.c. and 76.2 p.c., respectively in 1953. Of those arriving in 1954 who were 15 years of age or over 41.2 p.c. were married, 55.7 p.c. were single and 3.1 p.c. were widowed or divorced. The total number of single males exceeded the number of single females by 17,658 but there were more females than males in the married, widowed and divorced categories. In the single class, males were 51.8 p.c. more numerous than females, the numerical superiority being particularly heavy in the age group 20 to 29.

4.—Sex and Marital Status of Immigrant Arrivals by Age Group 1953 and 1954

Birthplace, Nationality and Origin.—Of the immigrant arrivals in 1954, 31.2 p.c. were born in British Commonwealth countries or in Ireland. This percentage compares with 29.9 p.c. in 1953 and 28.2 p.c. in 1952. In 1954, 41.7 p.c. of the newcomers were born in Germany, Italy or the Netherlands, 5.2 p.c. were born in the United States and 21.9 p.c. in other countries.

¹ Included with German.

² Includes Austrian.

³ Includes a small number of minor groups.

⁴ Reported as "Swiss" origin but evidently one of the constituent races such as German, French, Italian, etc.

Destination and Occupation.—Approximately 55 p.c. of the immigrants admitted to Canada in 1954 declared that they were destined to occupations in the labour force. The other 45 p.c., who were not gainfully occupied, were wives, children, other dependants and retired persons. Of the workers 11·8 p.c. were classed as professional and managerial, 12·9 p.c. were entering agricultural occupations, 14·2 p.c. were in service occupations, 30·5 p.c. were in manufacturing, mechanical and construction trades, and 15·4 p.c. were general labourers. Almost half the gainfully occupied female immigrants were in service occupations.

Ontario absorbed 53·8 p.c. of the arrivals in 1954, Quebec 18·4 p.c., British Columbia and the Prairie Provinces 25·3 p.c. and the Atlantic Provinces 2·5 p.c.

Returning Canadians.—The number of Canadians who returned to Canada during the years 1947 to 1954 after having resided in the United States were as follows: 1947, 8,970; 1948, 5,678; 1949, 4,050; 1950, 3,518; 1951, 3,635; 1952, 4,707; 1953, 4,606; and 1954, 4,516.

Section 3.—Emigration

Emigration from Canada is an important factor tending to offset to some extent both present and past immigration activities. The movement to the United States of native-born Canadians as well as of Europeans who originally migrated to Canada attained considerable proportions at certain periods. The figures of Table 10, showing the numbers of persons entering the United States from Canada during the years 1945-54 were obtained from the Immigration and Naturalization Service of the United States Department of Justice. No Canadian statistics on emigration are available.

10.—Persons Entering the United States from Canada, Years Ended June 30, 1945-54

PART II.—CANADIAN CITIZENSHIP*

Naturalization procedures and events leading to the passing of the Canadian Citizenship Act are given in the 1951 Year Book, pp. 153–155.

Section 1.—The Canadian Citizenship Act

The Canadian Citizenship Act came into force on Jan. 1, 1947, its purpose being to give a clear definition of Canadian citizenship and provide an underlying community of status for all the people of Canada. Since Jan. 18, 1950 the administration of Canadian citizenship has been the responsibility of the Department of Citizenship and Immigration. The provisions of the Act and its several amendments are outlined in some detail in the 1955 Year Book, pp. 177–181. More briefly, they are given in the following paragraphs.

Natural Born Canadian Citizens, Born before Jan. 1, 1947.—The Act defines the two categories of natural born Canadian citizens as (1) a person born in Canada or on a Canadian ship or aircraft; (2) a person born outside of Canada before Jan. 1, 1947 if the responsible parent (the father or, where the father is deceased or where the child is born out of wedlock, the mother) is a Canadian citizen, if he was, on Jan. 1, 1947, either a minor or had, prior to that date, been lawfully admitted to Canada for permanent residence and had not, before that date, acquired the citizenship or nationality of another country.

The Act provides that a person in the second category will cease to be a Canadian citizen on attaining the age of 24 years or on Jan. 1, 1954, whichever is the later date, unless he has his place of domicile in Canada at such date or has, before such date and after reaching the age of 21 years, filed a declaration of retention of Canadian citizenship.

Natural Born Canadian Citizens, Born after Dec. 31, 1946.—A person born outside of Canada subsequent to that date, whose responsible parent is considered a Canadian citizen pursuant to the terms of the Canadian Citizenship Act, is a Canadian if his birth is registered with the Registrar of Canadian Citizenship within two years of its occurrence or within such extended period as the Minister may authorize in special cases.

The person who becomes a Canadian citizen in such manner automatically ceases to be a Canadian citizen on reaching the age of 24 years unless he complies with the requirements as set out for a person born outside of Canada before Jan. 1, 1947 who was still a minor on that date.

Canadian Citizens other than Natural Born.—Before the 1953 amendments to the Citizenship Act the only persons who acquired Canadian citizenship on Jan. 1, 1947 through the transitional clauses of Sect. 9 were persons who were naturalized in Canada before that date, British subjects who had Canadian domicile at the commencement of the Act and women lawfully admitted to Canada and married prior to Jan. 1, 1947 whose husbands would have qualified as Canadian citizens if the Act had come into force before the date of marriage. Sect. 9 was amended on June 1, 1953 so that a British subject who had his place of domicile in Canada for at least 20 years immediately before Jan. 1, 1947 need not comply with the requirements of Canadian domicile provided he was not under an order of deportation on Jan. 1, 1947.

Status of Married Women.—Since the commencement of the Canadian Citizenship Act a Canadian woman does not lose Canadian citizenship upon marriage to a non-Canadian and a non-Canadian woman does not become a Canadian citizen upon marriage to a Canadian citizen. However a Canadian woman who marries a non-Canadian whose country of allegiance considers her to have acquired its nationality upon marriage may file a Declaration of Renunciation of Canadian citizenship if she wishes to divest herself of her Canadian citizenship. A non-Canadian woman who marries a Canadian citizen must

* Prepared in the Canadian Citizenship Branch under the direction of Laval Fortier, Deputy Minister, Department of Citizenship and Immigration, Ottawa.

apply to the court for a certificate of citizenship. If she is a citizen of another Commonwealth country she may apply direct to the Minister. The one concession as to the qualifications applicable in both instances is a residence of only one year in Canada rather than the prescribed five years of Canadian domicile.

A Canadian woman who married a non-Canadian prior to Jan. 1, 1947 and ceased to be a British subject may regain her status and be readmitted to Canadian citizenship upon application therefor, whether or not she is a resident of Canada.

Status of Minor Children.—The minor child of a non-Canadian who becomes naturalized in Canada may receive a certificate of Canadian citizenship upon application therefor by his or her responsible parent. Provision has also been made in the Citizenship Act for the granting of a certificate of citizenship to a minor child in special circumstances—to a child whose responsible parent is not a Canadian citizen but who has been admitted to Canada for permanent residence for example. Provision has been made for the granting of a certificate to a person who was adopted or legitimized and who has been admitted to Canada for permanent residence, if the adopter or the legally recognized father is a Canadian citizen.

Loss of Canadian Citizenship.—Canadian citizenship may be lost as follows:—

- (1) A Canadian citizen who when outside of Canada and not under disability (minor, lunatic or idiot) acquires by a voluntary and formal act other than marriage the nationality or citizenship of a country other than Canada. This does not apply if that country is at war with Canada at the time of acquisition but in such a case the Minister may order that he cease to be a Canadian citizen. The purpose of this is to hold the person, if deemed necessary, to his obligations as a Canadian.
- (2) A Canadian citizen who under the law of another country is a national or citizen of such country and who serves in the armed forces of such country when it is at war with Canada. This does not apply if the Canadian citizen became a national or citizen of such country when it was at war with Canada.
- (3) A Canadian citizen who when in Canada acquires voluntarily the citizenship of a foreign country (other than by marriage) may be deprived of his Canadian citizenship by Order of the Governor in Council, on recommendation of the Minister.
- (4) A Canadian citizen, other than natural born or one who has served in the Armed Forces of Canada in time of war, or other related circumstances, who resides outside of Canada for ten consecutive years without maintaining substantial connection with Canada, loses his citizenship automatically, but the period of absence may upon application be extended beyond the ten years for good and sufficient cause.

Loss of Citizenship by Revocation—Applicable Only to Naturalized Persons.—The citizenship of a Canadian citizen other than a natural born Canadian citizen may be revoked by the Governor in Council for such reasons as trading or communicating with an enemy country during time of war; disaffection or disloyalty while out of Canada or conviction by a court of competent jurisdiction of any offence involving disaffection or disloyalty while in Canada; obtaining a certificate of naturalization or Canadian citizenship by false representation or fraud; residence outside of Canada for not less than six years (without maintenance of substantial connection) since becoming a Canadian citizen or being naturalized in Canada; residence for not less than two years (without maintenance of substantial connection) in a foreign country of which he was a national or citizen at any time prior to his becoming a Canadian citizen or being naturalized in Canada.

Loss of Citizenship by Revocation—Applicable to Both Natural Born and Naturalized Persons.—The Governor in Council may in his discretion order that any person shall cease to be a Canadian citizen if, upon a report from the Minister of Citizenship and Immigration, he is satisfied that such person has, when not under a disability, (1) taken or made an oath, affirmation, or other declaration of allegiance to a foreign country, or (2) made a declaration renouncing his Canadian citizenship.

General.—During 1954 citizenship application forms were redrafted and made bilingual. The Certificate of Citizenship is also in bilingual form, replacing the former single certificate in English or French.

An amendment to the Citizenship Regulations in June 1955 authorizes the Department to issue miniature Certificates of Canadian Citizenship. These are considered the most convenient form of citizenship identity as they bear the holder's photograph and specimen signature. They are available to all Canadian citizens.

Section 2.—Canadian Citizenship Statistics

Citizenship of the Total Population.—Results of the 1951 Census show that 96.9 p.c. of the people of Canada were Canadian citizens; that 0.7 p.c. were citizens of other Commonwealth countries; 1.7 p.c. of European countries; 0.1 p.c. of Asiatic countries; 0.5 p.c. of the United States; and 0.1 p.c. of other countries. Table 1 shows the 1951 population classified by country of allegiance and origin. According to this table 98.0 p.c. of the persons of British Isles origins and 99.7 p.c. of those of French origin owed allegiance to Canada. Corresponding percentages for other European and Asiatic origins were 89.3 p.c. and 78.7 p.c., respectively.

³ Includes English, Irish, Scottish, Welsh and Manx.

Citizenship Certificates Issued.—In 1954, 26,977 Canadian Citizenship Certificates were issued, 26,548 in English and 429 in French. Corresponding figures for 1953 were 22,593 certificates, 22,102 in English and 491 in French.

During 1954 the Canadian Citizenship Registration Branch recorded 2,675 certificates of registration of births abroad, 15,941 declarations of intention, 314 declarations of retention of Canadian citizenship, and 6 petitions for resumption of Canadian citizenship. Certificates issued free to persons who had had active military service numbered 360. Corresponding figures for 1953 were 2,402 registrations of births abroad, 24,757 declarations of intention, 141 declarations of retention of Canadian citizenship, 44 petitions for resumption, and 672 certificates issued free to persons who had had active military service.

Characteristics of Persons Granted Citizenship in 1954.—Detailed statistics showing the characteristics of persons granted citizenship certificates became available for the first time in 1952; such characteristics included age, marital status, occupation, period of immigration, residence and previous nationality. The 1952 data were prepared for aliens* only. The 1953 and 1954 figures include information as well on British subjects who became Canadian citizens.

Of the total of 19,545 persons granted citizenship in 1954 only 6 p.c. had immigrated to Canada before 1921, 14 p.c. from 1921 to 1940, 73 p.c. in the period 1941 to 1950 and 5 p.c. since 1950. Regionally these new citizens were distributed as follows: 2.0 p.c. in the Atlantic Provinces, 12.9 p.c. in Quebec, 54.7 p.c. in Ontario, 15.7 p.c. in the Prairie Provinces and 14.1 p.c. in British Columbia. Just over 84 p.c. of them resided in urban centres as compared with 62 p.c. of the total population of Canada at the 1951 Census.

Almost 60 p.c. of the persons naturalized during 1954 were males. Young persons under 20 years of age constituted 9 p.c. of the total, persons 20 to 44 accounted for 60 p.c. those 45 to 64 for 27 p.c. and 65 or over for 4 p.c. The largest group (18 p.c.) owed allegiance to British countries. Just over one-sixth of them formerly owed allegiance to Poland; two-thirds of these persons were males and almost 80 p.c. had arrived in Canada in the period 1946 to 1950. The next largest group were those who declared themselves 'stateless' when applying for Canadian citizenship; 60 p.c. of these had been born in Poland, 15 p.c. in the USSR, and about 6 p.c. in Czechoslovakia and Yugoslavia. About 18 p.c. of the persons acquiring Canadian citizenship in 1954 were formerly citizens of China; almost 40 p.c. of them had immigrated to Canada before 1921 and another 40 p.c. arrived since 1950 and were mainly the minor children of Canadian citizens.

Of all the males granted citizenship certificates in 1954 almost 25 p.c. were employed in manufacturing and mechanical occupations, 9 p.c. in professional occupations or labourers in other than primary industries, and 8 p.c. were classified in each of the groups, proprietary and managerial, service, agricultural and construction occupations. Of all the females granted certificates 62 p.c. were homemakers; the most important occupation groups were manufacturing and mechanical, and clerical, each of which accounted for 7 p.c.

* In addition to those classified under Sect. 10 (1) of the Citizenship Act 1947, as shown in Table 2, they include the totals shown in Sect. 10 (3) and (4), as well as a number of those in Sects. 10 (5), 11 (2) and 11 (3).

NOTE.—The interpretation of the symbols used in the tables throughout the Year Book will be found facing p. 1 of this volume.

Vital Statistics provide a record of community and national development: a measurement of the pace of population growth, the number and distribution of people coming into the various age groups, the relative importance of each of the various causes of death, and population trends generally. This Chapter moreover attempts to provide a comparison of principal Canadian vital statistics rates with those of other countries and to present tables on marriages and deaths as well as detailed life tables for males and females. Births and deaths are classified by place of residence (births according to the residence of the mother) and marriages by place of occurrence.

The continuity of vital statistics provides a constant guide to the planning, operation and evaluation of a variety of national activities, notably in public health, education, community planning, and various types of business enterprise. The data are presented so as to be useful for the general reader as well as students of demography, public health, sociology and other specialized fields. The population data upon which the rates shown in this Chapter are computed are contained in Chapter III (Population) and in the several DBS reports relating to census and intercensal estimates of population. In making both international and interprovincial comparisons of birth, death and marriage rates, it is important to note that part of the differences observed over a period of years as between different countries, provinces or local areas may be caused by differences in the sex and age distribution of the populations involved. Similarly changes in the rates may be caused partly by changes in this distribution.

The history of the collection of vital statistics in Canada is covered in the 1948-49 edition of the Year Book, pp. 185-188. In addition to the information provided in *Vital Statistics* (Preliminary Report), *Vital Statistics of Canada* and other regular DBS annual reports, certain unpublished data are also available on request.

Section 1.—Summary of Vital Statistics

Table 1 gives a summary of the principal vital statistics of the provinces of Canada from 1921 when the system of collection of national statistics was initiated and Table 2 shows certain vital statistics for urban centres having at least 10,000 population at the date of the 1951 Census.

* Revised in the Vital Statistics Section, Health and Welfare Division, Dominion Bureau of Statistics.

POPULATION OF CANADA BY SEX AND FIVE-YEAR AGE GROUPS

This Chart shows the age-sex distribution of the population at the 1941 and 1951 Censuses, as an illustration of how that distribution may change within a short period of time. Such changes can have a very significant effect on vital statistics rates.

¹ As at the 1951 Census.² Per 1,000 live births.³ Not available for the first year of the period.

Section 2.—Births*

In Canada, the birth rate in 1921 was 29 per 1,000 population. As a rate of 35 per 1,000 is very high for countries of modern western civilization the Canadian birth rate had probably not fallen far or for long before 1921. It fell continuously until 1937 when it was 20 per 1,000 but then, owing to economic recovery and the War, it rose to 22 in 1940, to 24 in 1943 and reached its highest point in 1947 at 28·9. As in most other countries there was a slight decline in 1948 but the Canadian rate remained remarkably steady at just over 27 for the four years 1948 to 1951. It rose to 27·9 in 1952 when for the first time more than 400,000 births were registered. It continued to rise to 28·2 in 1953 and 28·7 in 1954. The birth rates in the provinces followed the same general trend with particularly high rates reported in 1954.

It has always been assumed that the Province of Quebec has had the highest birth rate in Canada, but Table 1 shows that since the late 1930's or early 1940's Newfoundland and New Brunswick have had higher birth rates than Quebec. In 1954 Newfoundland had a crude rate of 34·3, New Brunswick 30·4 and Quebec 30·4; Prince Edward Island and British Columbia had the lowest rates with 25·9 and 26·0 respectively. However these crude rates are based on total population and therefore do not reflect the fertility of the women who are of reproductive age in the different provinces. A more accurate measure of fertility is the rate based on the number of married women in the population in the reproductive age group, 15 to 49. The following figures, based on the 1951 Census, give the birth rates per 1,000 married women in the age group 15 to 49 by province:—

Newfoundland.....	220	Quebec.....	193	Alberta.....	160
Prince Edward Island....	186	Ontario.....	138	British Columbia.....	130
Nova Scotia.....	162	Manitoba.....	147	CANADA (exclusive of the	
New Brunswick.....	200	Saskatchewan.....	155	Territories).....	160

On this basis Newfoundland still had the highest birth rate, followed by New Brunswick and Quebec, and British Columbia had the lowest rate.

Sex of Live Births.—Wherever birth statistics have been collected they have shown an excess of male over female births. No conclusive explanation of this excess has yet been given. Nevertheless it is so much of an accepted statistical fact that a proper ratio of male to female births has become one of the criteria of complete registration. The number of males to every 1,000 females born in Canada in 1941-54 varied between 1,052 and 1,067. In 1954 there were 1,057 males born for every 1,000 females. Variations in the provincial sex ratios result from chance variation because of the relatively small number of births involved—the smaller the total number of births, the greater the chance of wide sex-ratio variations from year to year.

* For international comparisons see Section 8, pp. 234-35.

Hospitalized Births.—In 1954 over 84 p.c. of all Canadian births occurred in hospital. Although the proportions of hospitalized births have increased steadily since 1921 in all provinces these proportions still vary widely. The existence of prepaid or provincially sponsored hospital, maternity or medical care plans in some provinces, the unavailability of hospital facilities in others, particularly in remote rural areas, and preference for home delivery in some local areas are among the factors accounting for provincial variations in this respect. The noticeable increases in hospitalized births within recent years in those provinces that previously had the lowest proportion may be partly the result of increased hospital services and facilities being provided in those areas.

Births in Urban Centres.—Table 2, pp. 202-203, shows the number of births in 1953 and 1954, regardless of where they occurred, to mothers residing in urban centres of over 10,000 population.

Illegitimacy.—In 1954 less than 4 p.c. of the live births in Canada were illegitimate. This percentage is low compared with that of many countries of the world. In the five year period 1926-30 it was 3 p.c., whereas the average of the ten years 1945-54 was just over 4 p.c. The apparent increase was partly the result of more complete registration of illegitimate births brought about by the co-operation of provincial registration officials and social welfare agencies.

Stillbirths.—The rate of stillbirths has been falling since 1926 though not equally in all provinces. The rate of stillbirths to unmarried mothers has always been considerably higher than that for married mothers and consequently higher than the over-all rate; but this difference has been disappearing in recent years.

Multiple Births.—Approximately one confinement in 85 in Canada results in the birth of more than one child. In the period 1926-54 there have been 96,555 such confinements, of which 95,667 were twins and 875 were triplets. There have been twelve sets of quadruplets and one set of quintuplets—the Dionne quintuplets who were born in 1934.

The proportion of stillbirths is higher among multiple than among single births. It is about twice as high for twins and between three and five times as high for triplets.

Fertility Rates.—Sex and age distribution of the population is an important factor in determining birth, death and marriage rates. More than 95 p.c. of children born are to women between the ages of 15 and 50, so that, as noted earlier, variations in the proportion of women of these ages to the population as a whole will cause variations in the birth rates of different countries or regions even though the fertility of women at each age may be the same. Measures of fertility which are independent of the sex and age distribution of the population have therefore been devised. The best known of these are age-specific fertility rates and reproduction rates.

Ages of Parents.—Ages of the parents is an important variable in any analysis of birth statistics. The numerical and percentage distribution of legitimate live births by the age group of the parents is given for 1941, 1953 and 1954 in Table 8, of illegitimate live births by the age group of the mother in Table 9, of stillbirths by the age group of the mother in Table 10, as well as the average ages of the parents for each year shown.

Besides the fertility rates at each age three other factors help, in the main, to determine the average age of parents having children: firstly the average age of potential parents at any point in time, that is, of the population between the ages of 15 and 50; secondly the average age of couples at marriage; and thirdly the proportions of first and second births to total births. Other things being equal a high proportion of first and second births will result in a lower average age of parents. In 1930-32 first and second births were 43 p.c. of the total births but for the period 1945-48 first and second births together were 57 p.c. of the total. This change is very great and accounts for the lower average age of parents in the latter period. However the proportion of first and second births had declined to approximately 53 p.c. in 1952 and 52 p.c. in 1954.

These tables illustrate other significant facts: that the average age of fathers of legitimate children is about four years higher than the average age of mothers; that the average age of mothers of illegitimate children is four to five years lower than the average age of mothers of legitimate children—in 1930-32 the difference was six years (the fact that about 70 p.c. of illegitimate children are born to mothers under 25 years of age accounts for this difference); and that the average age of mothers of stillborn children is higher than that of the live born. Further, Table 10 shows that the rate of stillbirths per 1,000 live births increases with the age of the mother. It is over three times as high among mothers of 40-44 years and over four times as high among mothers of 45-49 years as it is among mothers at the ages of 20-24.

Section 3.—Deaths*

Since 1931 the Canadian death rate has fluctuated between 10·3 and 8·2 per 1,000 of the population, declining in recent years to a record low of 8·2 in 1954. Table, 1 pp. 199-201, shows that this decline has been apparent in varying degrees in all provinces. The generally low rates in the Prairie Provinces are partly the result of their younger average population; the uniformly higher rate in British Columbia is the result of the increasing proportion of people in the older age groups.

Subsection 1.—General Mortality

Sex and Age Distribution of Deaths.—Despite reductions in infant mortality over the past 25 or 30 years more deaths still occur in the first year of life than in any other single year. Of the 107,000 deaths occurring in 1926, 31,000 or almost 30 p.c. were of children under five years of age and three-quarters of those were of children under one year of age. Of approximately 124,500 deaths in 1954, over 16,000 or nearly 13 p.c. were of children under five years of age and over 83 p.c. of those were under one year. Most of the reduction took place among children over the age of one month but there was a notable decrease in all childhood ages up to five years.

Tremendous reductions have taken place in the mortality pattern since the early 1920's, with the most important reductions in the childhood and early adult ages. In 1926 over 19 p.c. of all male deaths were of persons five to 45 years of age; in 1954 these accounted for less than 11 p.c. of total deaths. The reduction in mortality among females in this age group is equally remarkable, the proportion dropping from 22 p.c. to approxi-

* For international comparisons see Section 8, pp. 234-35.

mately 9 p.c. Death rates for males up to age 45 have been roughly halved during the past 25 years; those for females in the same ages have been reduced as much as three to four times.

These reductions in the mortality rates in early and middle years of life have had the effect of increasing the number of people in the older age groups and of raising the average age of the population as a whole. As a natural consequence much larger proportions of deaths are now occurring at the older ages. Further, the reductions in rates will eventually raise the average age at death. In 1921 the average age at death of males was 39.0 years and of females 41.1 years; by 1954 this had advanced to 57.3 and 60.0 respectively. These trends are indicated clearly in Table 12.

Deaths in Urban Centres.—In Table 2 (pp. 202-203) deaths are classified by place of residence of the decedent. Death rates in urban centres vary only slightly from those of their respective provinces. However owing to the influx of young people from the rural areas the age distribution of the population in urban centres is often more favourable to a low death rate than that of the province as a whole.

Causes of Death.—Table 13 shows the deaths in Canada grouped according to the International Abbreviated List of 50 Causes. About 80 p.c. are in the following groups of causes: diseases of the heart and arteries, cancer, accidents, diseases of early infancy, the respiratory diseases—tuberculosis, pneumonia and influenza—and nephritis.

The rise in the average age at death has already been noted (p. 212). Causes of death that mainly affect children and young adults have declined. Diphtheria for example has been almost wiped out and tuberculosis has been greatly reduced. On the other hand the ageing of the population increases the proportion of deaths from certain causes that affect older people. Thus cancer and the diseases of the cardio-vascular-renal systems now account for a substantially larger proportion of all deaths than formerly.

These trends indicate the remarkable success that has attended the attack by health authorities on the infective and contagious diseases which in the past have constituted such a great hazard in the early and young adult years of life. They have similarly served to emphasize the emergence of the chronic and degenerative conditions of later life as the targets towards which the public health programs of the future will be directed. In effect Canada has shared the experience of most western nations in exchanging a high mortality in younger life for high morbidity in older age groups.

The following graphic presentation shows death rates for the major cause groups from 1931-54.

MAJOR CAUSES OF DEATH

Subsection 2.—Infant Mortality

Table 1, pp. 199-201, shows the striking improvement that has taken place in the rate of infant mortality during the past 34 years. Of the 1,254,000 children born in 1952-54, although approximately 44,000 died, over 72,000 lived to their first birthday who would have died at the rate prevailing in the period 1926-30.

As illustrated in Table 14 mortality among male infants is 25 to 30 p.c. higher than that among females for Canada as a whole, with wider variations for the individual provinces. As pointed out earlier there were in the 1941-54 period between 1,052 and 1,067 males born to every 1,000 females born, but because male infant mortality is higher the excess of males is reduced drastically by the end of the first year. For example in 1952-54 644,983 male children were born compared with 609,511 female children, an excess of 35,472 or 5.8 p.c.; 25,251 male children died during their first year compared with 18,657 female children, that is, 6,594 more. The excess of males at one year of age was thus reduced to 28,878 or 4.9 p.c.

As indicated in Tables 1 and 14 infant mortality rates vary considerably from province to province. One of the principal causes of these variations appears to be the different proportions of births that take place in hospital or under proper medical care (*see also* p. 205). Along with increased hospitalization has come better and more widespread prenatal and postnatal care. Other factors have also been important particularly the supervision of water supplies, improved sanitation, the pasteurization of milk and the use of antibiotics.

LEADING CAUSES OF INFANT DEATHS

RATE PER 100,000
LIVE BIRTHS

RATE PER 100,000
LIVE BIRTHS

Infant Mortality in Urban Centres.—Because of the relatively small numbers of infant deaths in individual cities and towns the rates for these centres usually vary widely from year to year. As is evident from Table 2, pp. 202-203, many cities and towns have maintained consistently low rates as compared with the national rate or the rate for the province in which they are situated.

Causes of Infant Deaths.—There were 14,764 infant deaths in 1953 and 13,841 in 1954. Of the 1954 deaths congenital malformations accounted for 2,137, immaturity 2,062, pneumonia among infants over four weeks of age 1,577, postnatal asphyxia and atelectasis 1,507 and injury at birth 1,386—or over 62 p.c. of the total. The Chart opposite shows the relative importance of the major causes of infant deaths from 1931-54, and the Chart following shows the comparative numbers of children dying at each month of age during the first year of life. Table 15 gives the causes of infant deaths for the years 1952-54.

¹ Less than one per 100,000 live births.

Subsection 3.—Maternal Mortality

As indicated in Table 1, pp. 199-201, the number of mothers who die in pregnancy and childbirth has been greatly reduced during the past two decades. Although the number of births has been much greater in recent years, the number of maternal deaths has declined steadily since about 1930 (when there were 1,215 deaths and a rate of almost five deaths for every 1,000 live births) to 290 in 1954. Since 1945 the rate of maternal mortality has dropped below two per 1,000 live births and was under one per 1,000 live births in 1954. Mortality among unmarried mothers is higher than among married mothers.

Age at Death.—Table 16 shows the distribution of maternal deaths by age groups and average age at death. The latter is slightly more than two years higher than the average age of all mothers at the time of childbirth. The rates per 1,000 live births by age groups show that age is a most important factor in maternal mortality. Though all the rates are much lower than they used to be, the inequalities between the age groups remain (see Chart, "Maternal Deaths," opposite). The rate at ages 30-34 is more than

twice as high as the rate at 20-24 years, and at 40-44 years it is over seven times as high. The higher rate for the "under 20" age group, compared with the age group 20-24, is owing to the high proportion of illegitimate children born to young mothers in the "under 20" group.

16.—Maternal Mortality and Rates per 1,000 Live Births by Age Group 1941, 1953 and 1954

(Exclusive of Newfoundland, Yukon and the Northwest Territories)

Causes of Maternal Deaths.—Table 17 shows maternal deaths by causes, numbers and rates per 100,000 live births. Until a decade ago puerperal sepsis and toxæmias of pregnancy were by far the most important causes. Since 1936 the rate for puerperal sepsis has been reduced by almost 95 p.c. owing in large measure to the use of sulpha and other antibiotics. Although there has been a reduction of over 70 p.c. since 1936 in the maternal death rate from toxæmias of pregnancy this group still remains a major cause of maternal deaths, second only to complications of delivery.

¹ Less than one per 100,000 live births.

Section 4.—Natural Increase*

In 1926-30 the rate of natural increase in Canada (excess of births over deaths) was 13 per 1,000 population. Owing partly to the depression the birth rate declined more than the death rate and the rate of natural increase fell to 9.7 in 1937. Since then the rate increased steadily from 12.6 in 1940-42 to 19.3 in 1947. The rates of 17.8 in 1948, 18.1 in 1949, 18.1 in 1950, 18.2 in 1951 and 19.2 in 1952 were lower owing to increases in total deaths in recent years. The 1947 rate however was exceeded in 1953 with a rate of 19.6 and in 1954 with 20.5.

Table 18 shows that the rates of natural increase in the provinces followed generally the rate for Canada as a whole. In earlier years Saskatchewan and Quebec had the highest rates. The high rates in all the Prairie Provinces were owing partly to their relatively younger populations and consequent low death rates. In Quebec the death rate in 1926-30 was high but it has declined steadily since. Owing to high birth rates Newfoundland and New Brunswick have had the highest rates of natural increase in Canada in recent years. (See Chart on opposite page.)

The rates of natural increase are generally higher for females than for males because death rates for males are higher than for females. In the western provinces particularly the ratio of males to females in the total population is higher than in other parts of Canada and this tends to lower the rate of natural increase.

In Canada, a country with a fairly young population and where immigration has been on a large scale, an excess of males is to be expected but the higher rate of natural increase for females may gradually reduce this excess. The trend is towards an eventual excess of females in the total population—as there now is in most European countries—unless immigration again raises the male ratio.

* For international comparisons, see Section 8, pp. 234-35.

Natural Increase in Urban Centres.—The classification of births and deaths by place of residence makes it possible to compile the natural increase in the population of urban centres; the figures are presented in Table 2, pp. 202-203.

Section 5.—Marriages and Divorces*

Subsection 1.—Marriages

Table 19 shows the number of marriages and the marriage rates per 1,000 population in Canada and the provinces, and percentages of brides and bridegrooms, according to place of birth. For the country as a whole in 1954, 83 p.c. of the grooms were born in Canada—nearly 68 p.c. in the province in which they were married. Over 87 p.c. of the brides were born in Canada—nearly 75 p.c. in the province in which they were married. However there are wide variations from this pattern as between provinces; as might be expected, in the older Atlantic Provinces and Quebec there is a greater tendency than in the other provinces to marry native Canadians, both partners often being born in the same province.

* For international comparisons, see Section 8, pp. 234-35.

Age and Marital Status of Bridegrooms and Brides.—Over 91 p.c. of the marriages in 1954 were between persons who had not previously been married; 5 p.c. of the brides and nearly 5 p.c. of the grooms had been widowed, and more than 3 p.c. of the marriages were of divorced persons. The average age at marriage of bachelors is just under 27 and that of spinsters just under 24 years. The average age of widowers and widows at the time of remarriage is double that of bachelors and spinsters. Over 90 p.c. of spinsters married in 1954 were under 30 years of age—75 p.c. under 25 years. Over 80 p.c. of bachelors were under 30 years with more than 50 p.c. of these less than 25 years of age. Table 20 gives the age pattern at marriage for bridegrooms and brides for the years 1953 and 1954.

Religious Denominations of Brides and Bridegrooms.—The distribution of brides and bridegrooms by religious denominations is roughly the same as that for the population as a whole. Table 21 shows the very strong influence that religion has on marriage. About 71 p.c. of all marriages are between persons of the same religious denomination; in 1954 among those of Jewish faith it was over 93 p.c.; among Roman Catholics nearly 89 p.c.; United Church 61 p.c.; and Eastern Orthodox over 55 p.c.

Subsection 2.—Dissolutions of Marriage (Divorces)

For many years after Confederation the number of divorces granted in Canada was small. There were fewer than 20 divorces in every year before 1900, 21 in 1903, 51 in 1909 and 60 in 1913. These numbers represent less than one per 1,000 of the yearly number of marriages.

At the end of World War I in 1918 the number of divorces increased. The generally unsettled conditions and the long separation of men on Active Service from their wives may have contributed to this increase. Changes in law and procedure may also have been a further factor—at present, Quebec and Newfoundland are the only provinces in which applicants for divorce must secure a private Act of Parliament. The number of divorces increased from 11 in 1900 to a peak of 8,199 in 1947, declining gradually after that year until 1951 when they numbered 5,263. The numbers rose to 5,634 in 1952 and 6,110 in 1953 but declined to approximately 5,800 in 1954.

¹ No autumn term of court held in 1944; cases held over till January 1945. ² By a new rule adopted in August 1948, a *decree nisi* became absolute at the end of three months and as a result a number of divorces did not become effective until the following year.

Section 6.—Vital Statistics of the Yukon Territory and the Northwest Territories

The vital statistics of the Yukon Territory and the Northwest Territories have been collected since 1924. These statistics are not presented with those of the ten provinces in the tables of this Chapter because the figures for some of the early years are not considered complete in that the personal particulars frequently are not available, the small and varying population of each year is not accurately known and, as some areas are accessible only during the summer months, complete returns are not available sufficiently early in the calendar year for inclusion in the national totals for routine publication. A summary of the principal vital statistics for these Territories is presented in Table 23.

23.—Vital Statistics of the Yukon and the Northwest Territories 1926-54

NOTE.—Figures for 1944-54 are by place of residence; for previous years by place of occurrence.

Section 7.—Canadian Life Tables

Three official life tables for Canada have been published: the first was calculated on the basis of the deaths of 1930-32 and the census population of 1931; the second on the basis of the deaths of 1940-42 and the census population of 1941 and the third was based on the Census of 1951 and deaths during 1950-52. In addition tables have been computed for Canada as a whole for the years 1945 and 1947 based on estimated populations by sex and age and the deaths recorded as having occurred during those years. The life table values for 1951 are given in abbreviated form in Table 24.

Life tables give a summary of the health and general conditions of survival of the population in a conventional, standard form. A hypothetical number (100,000) of births of each sex is assumed as a starting point. The life tables show how, on the basis of the mortality rates at each age in the given years, these 100,000 of each sex are reduced in number by death. For example during the year 1951, of 100,000 males born, 4,325 died in

their first year so that 95,675 survived to one year of age; 326 died in their second year so that 95,349 survived to two years of age, and so on. At 100 years of age only 90 of the original 100,000 would have survived. The probability of death at each age is the ratio between the number of deaths and the population at each age. Finally, the expectation of life is the average number of years which a person might expect to live if the mortality rates in the given years remained constant.

24.—Canadian Life Table 1951

Age	Males				Females			
	Number Living at Each Age	Number Dying Between Each Age and the Next	Probability of Dying Before Reaching Next Birthday	Expectation of Life	Number Living at Each Age	Number Dying Between Each Age and the Next	Probability of Dying Before Reaching Next Birthday	Expectation of Life

Mortality rates at all ages for males have been almost consistently higher than for females. Males have the highest risk of mortality as compared with females during their first year of life, from their late 'teens to early 30's and from age 50 to 65. For both boys and girls the risk of mortality drops rapidly during childhood and is lowest at about age 10, increases gradually to about age 40 for males and about 50 for females and then rises steeply with advancing age. At the mortality rates given in the 1951 Life Table (see Table 24) about 15,000 males would have died before reaching age 50 as compared with about 11,000 females; only 55,000 of the original group of 100,000 males would have survived to age 70 as compared with about 66,500 women.

In Canada by 1951 life expectancy at birth had reached a new high record of 66·3 years for males and 70·8 for females—comparable to the expectancy for other countries of the world with highly developed medical and public health care. Once a child has passed its first year of life however its life expectancy increases appreciably. At one year of age a male child at present mortality risks may on the average expect to live an additional 68·3 years and a female 72·3 years, representing for an infant boy a gain of two full years more than his expectation at birth and 1·5 more years for an infant girl. The expectation of life of a 15 year old boy is 55·4 more years; of a 15 year old girl 59·2 years. At 25 years of age the expectation is about 46 years for men and almost 50 for women and at age 70, 10·4 for men and 11·6 for women.

Table 25 summarizes the life expectancy figures extracted from the Canadian Life Tables for 1931, 1941 and 1951. Life expectancy at birth increased for men from 60 in 1931 to over 66 years in 1951 and from 62 to 70.8 years for women during the same period. This is a gain for males of 3.4 years since 1941 compared with a gain of almost 3 years in the previous decade; females gained 4.5 years since 1941 compared with 4.2 years in the preceding decade. Thus, since 1931 a total of 6.3 years have been added to male life expectancy and female longevity has been lengthened by 8.7 years.

The increases in life expectancy have been predominantly at the younger ages, particularly in infancy, and diminish with advanced age. For example, since 1931, 2.6 years have been added to the life expectancy of a 5 year old male, 1.7 years to a 20 year old, almost 6 months to a 40 year old and barely three months to a 60 year old as compared with 6.3 years for a new born male. During this period life expectancy for a 5 year old female gained 5.6 years; for a 20 year old 4.7 years, 2.6 years for a 40 year old and 1.5 years for a 60 year old as compared with 8.7 years for a newborn female.

Longevity has improved for both sexes, though more so and at all ages for females, but there has been only slight improvement for males beyond middle life. Briefly the rapid decline in the death rate for infants of both sexes is continuing, with slower declines with advancing age, so that relatively stationary death rates have been established from about 50 onwards for males and up to about 80 for females.

The fact that such a pattern exists is important in interpreting the results of these life tables. The arbitrary population base of 100,000 of each sex in the tables has been subjected to the mortality rates in effect in 1950-52, and the life expectancy computed as if those death rates at each age were to prevail during their lifetime. Actually the theoretical 200,000 infants born in 1950-52 will most probably have a pattern of survival and life expectancy quite different from that of the present life table as they will spend most of their lives under conditions of public health and medical care which in all likelihood will be superior to those prevailing in 1950-52.

The improvement in life expectancy, particularly among children and adolescents is owing mainly to the substantial reduction in recent years of mortality from infectious diseases; on the other hand diseases associated with middle and old age are much less amenable to control. It is therefore unlikely that improvement in life expectancy in the future will be comparable to that of the past two decades. As approximately 12 p.c. of deaths in 1951 occurred among infants and an additional 72 p.c. among persons over 50 any further improvement must come as the result of further declines in mortality from conditions associated with childbirth and early infancy, further control of infectious diseases, prevention of accidents, and advances in combatting diseases associated with middle and old age, such as cardio-vascular-renal conditions and cancer.

Section 8.—International Comparisons of Vital Statistics

The following table gives a summary of Canada's general and provincial vital statistics rates along with those of several other countries. It will be noted that the low death rate in Canada is bettered by only two countries and that most of the provinces have lower rates than most other countries. The birth rate too makes Canada one of the fastest growing countries and this country currently ranks sixth among the countries listed. However there is marked room for improvement in rates of infant mortality; ten of the countries listed have lower rates than Canada.

NOTE.—The interpretation of the symbols used in the tables throughout the Year Book will be found facing p. 1 of this volume.

A special article on the development of public health, welfare and social security in Canada appears in the 1952-53 Year Book, pp. 224-229. The article outlines the evolution of provincial and municipal administration, the development of federal responsibility, and governmental expenditure in the fields of health, welfare and social security. A special article dealing in detail with the National Health Grant Program appears at pp. 215-223 of the 1954 edition. A chart on p. 230 of the 1955 Year Book shows net general and capital expenditures on health and welfare and total spent, by level of government, for the years 1947-53.

PART I.—PUBLIC HEALTH

Section 1.—Federal, Provincial and Municipal Health Activities*

The planning, supervising and financing of public health and medical care services in Canada rest mainly with the provinces though the actual administration of services is conducted in most provinces by municipal and other local authorities. The Federal

* Prepared by the Research Division, Department of National Health and Welfare, Ottawa.

Government provides consultative and specialist services, assists in the financing of provincial health activities through the National Health Program and also maintains services for special groups such as veterans and Indians.

Subsection 1.—Federal Health Activities

Federal participation in health matters is largely centred in the Department of National Health and Welfare, with certain important programs being administered by the Department of Veterans Affairs which provides medical and hospital care to veterans, chiefly for disabilities resulting from war service; the Department of National Defence, responsible for the health of the Armed Forces; the Medical Division of the National Research Council which administers grants for medical research; and the Dominion Bureau of Statistics, responsible for the collection and compilation of health statistics. The Department of Agriculture has certain responsibilities in connection with food production.

Under the Department of National Health and Welfare Act of 1944 the Department is responsible for the administration of certain statutes, for research in health matters, for the carrying out of international health obligations undertaken by Canada and, in co-operation with the provinces, for the preservation and improvement of public health.

Under the Quarantine Act the Department maintains a maritime and aerial navigation quarantine service against entry of infectious diseases; it advises on the administration of sections of the Immigration Act dealing with health and conducts, in Canada and overseas, the medical examination of applicants for immigration. It also provides care for sick mariners as required under Part V of the Canada Shipping Act, and has certain national and international responsibilities with regard to the pollution of boundary and other waters.

Under the Food and Drugs Act, the Proprietary or Patent Medicine Act and the Opium and Narcotic Drug Act, the Department is responsible for the control of the safety and purity of food and drugs; the registration, preparation and sale of proprietary or patent medicines; and control of the import, export and distribution of narcotic drugs.

The Department advises on the visual eligibility of applicants for blindness allowances and co-operates with the provinces in the provision of surgical or remedial treatment for selected recipients of these allowances; it is responsible for supervision of health conditions for persons employed on federal public works, as provided under the Public Works Health Act, and maintains a program for the conservation and promotion of the health of civil servants and other Federal Government employees. Medical advisory services are provided for the Department of Transport in all matters pertaining to the safety, health and comfort of air crew and passengers.

The National Health Program.*—The National Health Program, introduced in 1948, provides for the payment of federal grants to the provinces for the development of health and hospital services; at the present time 12 grants are available.

Since the inception of the program the provinces have steadily increased their utilization of the grants. The annual amounts of expenditure in each fiscal year have been as follows: 1948-49, \$7,400,000; 1949-50, \$15,500,000; 1950-51, \$18,700,000; 1951-52, \$23,900,000; 1952-53, \$26,900,000; 1953-54, \$29,200,000; and 1954-55, \$31,600,000. From 1948 to 1954 expenditures amounted to approximately 59 p.c. of the funds available; the following figures show that the proportion for 1954-55 was 64 p.c.

* A special article on the first five years of the National Health Program is given in the 1954 Year Book, pp. 215-223.

1.—Amounts Available to the Provinces and Amounts and Percentages Expended under the National Health Program by Grant, Year Ended Mar. 31, 1955

Grant	Amount Available ¹	Amount Expended	Proportion Expended ²
	\$	\$	p.c.
Cancer control.....	3,598,795	2,642,920	73.4
Crippled children.....	519,898	427,319	82.1
General public health.....	7,390,500	5,317,565	71.9
Hospital construction ³	17,729,698	9,456,990	53.3
Mental health.....	7,234,868	6,013,547	83.1
Professional training.....	516,300	655,781	127.0
Public health research.....	512,900	437,952	85.3
Tuberculosis control.....	4,239,531	4,239,282	99.9
Veneral disease control.....	518,099	438,883	84.7
Child and maternal health ⁴	1,000,000	560,384	56.0
Laboratory and radiological services ⁴	5,173,350	1,238,125	23.9
Medical rehabilitation ⁴	1,000,000	168,677	16.8
Totals.....	49,433,939	31,597,425	63.9

¹ Authorized by P.C. 1954-15/659.

² Expenditures may exceed 100 p.c. of amounts available through transfer of unexpended funds from one grant to another.

³ Grant consisted of \$6,729,698 for new projects and a revote of \$11,000,000 to complete projects approved before Apr. 1, 1953, on which construction started before Oct. 1, 1953.

⁴ First introduced in the fiscal year 1953-54.

Under the Program, up to the end of the fiscal year 1954-55, aid for construction was approved for 54,754 beds, 6,597 bassinets, 8,576 nurses' beds and space in community health centres and combined laboratories exceeding 4,000 bed equivalents. Approximately 9,100 health workers had been trained or were undergoing special training and more than 5,400 additional health workers had been employed with federal grant assistance. Preventive and treatment services across the country were greatly extended, health facilities had been aided by the purchase of additional technical equipment and a significant increase in health research was made possible.

Federal Grants to Non-governmental Organizations.—Grants are paid directly to the following non-governmental agencies engaged in health work: the Canadian Red Cross Society, the Canadian Tuberculosis Association, the Victorian Order of Nurses, the St. John Ambulance Association, the Canadian Paraplegic Association, the Canadian Mental Health Association, the Health League of Canada, the Canadian Public Health Association, the Canadian National Institute for the Blind, L'Association Canadienne-Française des Aveugles, L'Institut Nazareth de Montréal, and the Montreal Association for the Blind.

Federal grants are also provided under the National Health Grant Program to assist in the operation of special treatment services carried out in a number of provinces by voluntary organizations, such as the Canadian Arthritis and Rheumatism Society and various agencies engaged in the rehabilitation of crippled children.

Medical Care of Indians and Eskimos.—Health services for Indians and Eskimos are administered by the Department of National Health and Welfare. In 1954, 18 hospitals, 33 nursing stations and 65 other health centres were operated by the Department which also reimburses on a per diem basis the mission and other non-federal hospitals that provide accommodation for Indians and Eskimos. Full time departmental medical officers serve the larger Indian reserves and part time officers serve the smaller bands. Fees are also paid to local physicians for services to Indians. Information relating to all health services provided in the Yukon and Northwest Territories is given at pp. 247-48.

Consultative Services.—Certain Divisions of the Department provide technical information and advice concerning the evaluation of programs and procedures and the establishment of standards in various health fields, and conduct surveys in research and development both independently and in co-operation with other departments and agencies.

These Divisions include Blindness Control, Child and Maternal Health, Occupational Health, Nutrition, Mental Health, Dental Health, Epidemiology, Hospital Design, the Laboratory of Hygiene, Information Services, and Research.

Subsection 2.—The Dominion Council of Health

The Dominion Council of Health is a statutory advisory body to the Minister of National Health and Welfare, established in 1919 and deriving its present legislative authority from Sect. 7 of the National Health and Welfare Act 1944 (R.S.C. 1952, c. 74). It is composed of the Deputy Minister of National Health who acts as Chairman, the deputy ministers of health of each of the ten provinces and five appointees of the Governor in Council, selected by tradition to represent such major segments of the population as agriculture, organized labour and women's organizations.

The duties and powers of the Council as formally prescribed by the Governor in Council are:—

- (1) The consideration of matters relating to the promotion or preservation of the health of the people of Canada and the initiation of recommendations and proposals to the Minister of National Health and Welfare and other appropriate authorities in regard thereto;
- (2) The furnishing of advice to the Minister of National Health and Welfare in respect to the matters provided in Sect. 5 of the Department of National Health and Welfare Act, relating to the promotion or preservation of the health of the people of Canada, over which the Parliament of Canada has jurisdiction.

Through the Council a direct means of co-operation at the technical level is provided between provincial health departments and the Department of National Health and Welfare. In addition to being able to draw on both federal and provincial resources to aid its deliberations it is assisted by a number of technical advisory committees composed of federal and provincial officials in different specialized fields. These committees include the Technical Advisory Committee on Public Health Laboratory Services, the Advisory Committee on Mental Health, the Federal-Provincial Nutrition Committee, the Federal-Provincial Conference on Health Education, the Federal-Provincial Conference of Communicable Disease Control Directors and the Technical Advisory Committee on Public Health Engineering.

The Council usually meets twice each year. Any member may submit items for the agenda and any agency wishing to make representation to the Council may do so. Consideration of a matter by the Council usually infers that it is of some common interest or concern to more than one province, but members are free to seek its advice regarding a problem of particular or individual interest should they so desire.

Although the Council is of a purely advisory character its recommendations reflect the considered opinions of senior health administrators and scientific workers across the country and have had very considerable influence on the development of public health administration in Canada. The recommendations frequently have led to an early combined approach by federal and provincial governments which might otherwise have been achieved only after long periods of negotiation.

The unique effectiveness of an organization such as this, in a federally governed country, has been demonstrated on a number of occasions. The Council has taken an active part in the development of the National Health Program and, in addition to advising on the general operation of the program and on situations developing in different provinces, has played an important role in such combined federal-provincial projects as the National Sickness Survey. Through the arrangements made by the Council for the production and distribution of ACTH and cortisone for use by clinical investigators throughout Canada it has been estimated that the clinical assessment of their value was advanced by at least two years. In the same way the Council was able to facilitate arrangements for the production of gamma globulin and later of Salk vaccine (*see pp. 258-60*).

Because of its character the Council can act objectively in promoting the best interests of public health. It has come to be regarded and respected as a focal point of national leadership in assessing and meeting Canada's health needs.

Subsection 3.—Provincial and Municipal Health Activities

Health services in the provinces are administered in different ways but provincial functions commonly include central planning and administration; the operation of special programs affecting the entire province in such fields as cancer, mental health, tuberculosis and laboratories; consultant service to local authorities; the administration of regulations governing local services; the provision of basic services in areas without municipal organization; and participation in the work of local health units in areas where that type of administration has been developed.

At the local level responsibility for services varies widely but municipalities in most provinces provide a range of basic public health services and participate in the costs of hospital care for indigents. In recent years there has been a rapid growth of health services in smaller centres and rural areas through the organization of health units with full time staff serving counties or other combinations of local government areas. This type of organization concentrates on a generalized health program that includes public health nursing, sanitary inspection, communicable disease control, child, maternal and school hygiene and health education and has been introduced in most provinces; financial and administrative responsibility is shared by the provincial and local authorities involved. Despite a trend towards greater provincial participation in these local units many remain under local administration as do the highly developed health departments found in the larger cities. Outside of fully organized health-unit areas municipalities usually appoint part time medical officers and other personnel while the provincial authorities assume responsibility in the areas lacking municipal organization.

Newfoundland.—Health measures in Newfoundland are centrally administered by the Department of Health. Its main functions include the operation of tuberculosis, venereal disease and other communicable disease control programs, nutrition and sanitary inspection services, the operation of provincial hospitals and the provision of prepaid medical, hospital and nursing care throughout large areas of the Island of Newfoundland.

The Province operates a general hospital at St. John's, administers the cottage hospital scheme and subsidizes other general hospitals maintained by voluntary organizations. The cottage hospital scheme, operated on a voluntary prepayment basis, is designed to provide hospital service and domiciliary medical care for people living in outlying areas. Services are provided through 18 small hospitals which have a total capacity of almost 500 beds; most of them are equipped with laboratory and X-ray facilities. Medical officers and nursing stations in adjoining communities supplement these services. In most cottage hospital areas prepayment of \$15 annually for the head of each family and \$7.50 for single adults entitles subscribers to outpatient diagnosis and treatment, to home visits by the doctor and to hospitalization. The cost of medical and hospital care for indigents is generally borne by the Province.

The Department of Health operates tuberculosis sanatoria at St. John's and Corner Brook. Free X-ray and diagnostic services are provided by these institutions supplemented by BCG vaccination and case-finding surveys conducted in co-operation with the Newfoundland Tuberculosis Association. The Department also subsidizes diagnostic and treatment services conducted in the northern areas by the International Grenfell Association and the Notre Dame Bay Memorial Hospital.

The mental health program is centred in the Hospital for Mental and Nervous Diseases at St. John's; a day-treatment unit has various forms of therapy for outpatients.

Provincially administered venereal disease clinics operate at St. John's and at various cottage hospitals throughout the Province. Free treatment services and drugs for venereal disease are available to persons attending the central clinic, cottage hospital subscribers and medical indigents.

A nutrition program includes educational work and such activities as the distribution of concentrated orange juice and cod-liver oil. Public dental services are provided through a provincial clinic at St. John's and a seaborne dental clinic in the Bonne Bay area is operated by the Junior Red Cross.

Prince Edward Island.—The Health Branch of the Department of Health and Welfare includes Divisions of Public Health Nursing, Nutrition, Sanitary Engineering, Dental Health, Laboratories, Venereal Disease Control, Cancer Control, Tuberculosis Control, Mental Health and Vital Statistics.

Generalized public health nursing services are conducted by four district nurses and sanitary services are provided by three inspectors under the direction of a public health engineer. Free dental treatment is available for needy children at permanent clinics in Charlottetown and Summerside and for children in Grade I classes in rural areas through two mobile units. Branch laboratories in seven of the larger hospitals operate under the supervision of the Central Laboratory at Charlottetown. A provincial venereal disease clinic is also operated at Charlottetown.

Free diagnostic services for tuberculosis are made available through two stationary clinics and a mobile unit is operated by the Tuberculosis League. At the Provincial Sanatorium at Charlottetown treatment services, though not unqualifiedly free, are heavily subsidized by the Province; rehabilitation training and employment-placement services are provided. The Sanatorium contains a special treatment unit for poliomyelitis patients with residual paralysis; the Province pays the full cost of treatment as well as 50 p.c. of the cost of hospital care and special nursing services in general hospitals for patients in the acute stage of the disease.

Free diagnostic services for cancer are given at a clinic located at Charlottetown. Hospitalization for diagnosis is provided without charge for a period of three days for indigent cancer patients. A mental health diagnostic clinic and a speech therapy service for school children with speech and hearing impairments are operated at Charlottetown.

Per diem grants are made to general hospitals for all patients and the Province also defrays the cost of operating the Falconwood Mental Hospital and the Provincial Infirmary.

Nova Scotia.—The principal Divisions of the Department of Public Health are Laboratories, Neuropsychiatry, Hospitals, Vital Statistics, Dental Services, Nutrition, Nursing Service, Environmental Hygiene, Child and Maternal Health and Communicable Disease Control. In addition a provincial program of generalized public health services is administered through eight local health divisions, each staffed by public health nurses and sanitary inspectors under the supervision of a full time divisional medical health officer. The City of Halifax operates its own Health Department.

Laboratory services including bacteriological, pathological and other examinations and milk and water analyses, have been improved and extended through the work of the Provincial Central Laboratory at Halifax and branch laboratories at Sydney and Kentville. Laboratory test and field investigations are also conducted by the Division of Environmental Hygiene.

Field services for the detection of tuberculosis and venereal disease are mainly provided through the local health divisions. The Department also maintains two clinics for the free treatment of venereal disease, and conducts mass tuberculosis X-ray surveys and rehabilitation services in co-operation with the Nova Scotia Tuberculosis Association. Free treatment for tuberculosis is provided in three provincial sanatoria and the municipal sanatorium at Halifax.

Institutional facilities for mental patients include an active treatment mental hospital and a training school for mental defectives, both provincially operated, and 17 county homes administered by local government authorities. Mental health clinics are in operation at Sydney and Halifax, and inpatient and outpatient psychiatric services are provided at the Victoria General Hospital, Halifax.

Three provincial mobile dental clinics provide treatment for children in rural areas. A cancer clinic and a treatment clinic for poliomyelitis form part of the service at the provincially owned Victoria General Hospital; branch poliomyelitis clinics have been established at Sydney and Antigonish. All approved general hospitals receive a provincial per diem subsidy for each patient.

Recipients of blind persons' allowances and mothers' allowances are eligible for limited medical services from the Medical Society of Nova Scotia and persons in any of the public assistance categories as well as other indigents are entitled to receive hospitalization as a municipal responsibility.

New Brunswick.—The Health Branch of the Department of Health and Social Services includes the following Divisions: Hospital Services and Cancer Control, Laboratories, Public Health Nursing, Communicable and Venereal Disease Control, Tuberculosis Control, Maternal and Child Health, Dental Health, Mental Health, and Sanitary Engineering.

All district medical health officers and most public health nurses are employed by the Province and other local health services are appointed by the boards of health of 16 local health sub-districts, each corresponding to a county. Usually from two to four sub-districts are serviced by a district medical health officer assisted by public health nurses. Certain locally administered nursing and sanitary inspection services are subsidized by the Province.

Pathological, bacteriological, serological and chemical tests are provided by the Provincial Laboratories at Saint John and two regional laboratories at Moncton and Fredericton. Free distribution of biologicals and other materials for the prevention of communicable disease and insulin for indigent diabetics is supervised by the Provincial Laboratories. Free diagnostic services for tuberculosis are provided in ten centres, including a central clinic operated by the New Brunswick Tuberculosis Association at Saint John. The Health Department supervises and provides free treatment in two privately operated, one municipal and two provincially owned sanatoria. One clinic for the treatment of venereal disease is operated at Saint John.

Eleven cancer diagnostic clinics provide free diagnosis and free tissue-examination service. X-ray and radium treatments are provided without charge in four of the larger hospitals to patients who come under the supervision of the cancer clinics. Acute and postparalytic cases of poliomyelitis also receive free hospital treatment and grants are made to the Junior Red Cross to provide free treatment for other crippling conditions in children.

A mental health program includes the operation of three community clinics for diagnosis and treatment and a day training school for mentally retarded children at Saint John. Hospitalization for mental illness is available in the provincial hospitals at Lancaster and Campbellton.

Provincial per diem grants are paid on behalf of all patients to approved general hospitals.

Quebec.—The Ministry of Health maintains the following Divisions: County Health Units, Sanitary Engineering, Epidemiology, Laboratories, Demography, Psychiatric Hospitals, Public Charities, Industrial Hygiene, Nutrition, Venereal Disease, Tuberculosis, Health Education, and Medical Services to Settlers.

The Division of County Health Units supplies services through 67 county and multi-county health units covering more than 60 p.c. of the population of the Province. The maintenance and operation of these units, each with a full time medical health officer assisted by public health nurses and sanitary inspectors, is the responsibility of the Ministry of Health, with small local financial contributions. In addition full time health departments operated by the larger cities serve more than one-third of the provincial population. Drugs supplied by the Provincial Department to physicians and health units include vaccines, sera, streptomycin for sanatoria patients and penicillin for venereal disease. Laboratory services, including bacteriological and other analyses, are available to physicians and health units at the Central Laboratory, Montreal.

The Province organizes tuberculosis clinics in rural areas and gives assistance to city agencies operating clinics or dispensaries for prevention, case-finding and treatment. BCG immunization against tuberculosis, administered to new-born infants in hospitals

and available to children generally through the health units, is a special feature of the control program. The Department supervises and subsidizes tuberculosis sanatoria and mental institutions, which are operated chiefly under private and religious auspices; in these the majority of patients receive care without charge.

The Medical Services to Settlers Division provides free nursing and physician services to residents of isolated areas. The staff consists of salaried nurses and part time physicians paid on a fee-for-service basis. Services given include obstetrical care, examinations, vaccinations and immunizations, and emergency medical care.

No specially organized program of medical care exists for public assistance recipients in Quebec although free care to indigents is available from a variety of dispensaries, clinics and other charitable agencies. Under the provisions of the Public Charities Act free public hospital care is provided to persons unable to pay, with about 50 p.c. of the cost assumed by the Province, 15 p.c. by the responsible municipality and the remainder by the recognized agency providing the service.

Ontario.—The Department of Health carries on public health services through the following Divisions: Health Units, Public Health Nursing, Maternal and Child Hygiene, Dental Services, Epidemiology, Venereal Disease Control, Tuberculosis Prevention, Industrial Hygiene, Laboratories, Medical Statistics, Mental Health, Nursing, Public and Private Hospitals, and Sanitary Engineering.

Local public health services are available to more than one-quarter of the population through 27 health units administered locally but with consultative services and financial support supplied by the Department. Elsewhere local services are organized through full or part time municipal health departments and, in unorganized territory, are organized by the Province. Provincial grants are made to local boards of health for school dental services and venereal disease clinics and special grants are made to hospitals for the treatment of poliomyelitis patients.

Public health legislation affecting water supplies, milk and food and other environmental sanitation is administered by the Department. Maternal and child health care is provided through clinics and in addition any expectant mother may receive one free prenatal examination. Systematic dental examinations for children combined with instruction in dental hygiene have been initiated in five local health units and two city health departments; school dental treatment services are provided by various municipalities. In northern areas two railway dental cars operated by the Province and three mobile units maintained by the Red Cross provide educational and treatment services in less populated districts.

The Central Laboratory, 13 regional laboratories, five subsidized associated laboratories and one mobile unit carry out bacteriological and other examinations for clinics, hospitals and private physicians. Biologicals and other materials for the prevention and control of communicable diseases, insulin for indigent diabetics and streptomycin for tubercular patients are distributed free of charge by the Department. Chest clinics held in more than 200 centres are financed mainly through funds of local tuberculosis associations and the Department. The Province pays the major portion of the cost of maintaining patients in 14 sanatoria operated by voluntary groups. Cancer control services are administered by the Ontario Cancer Treatment and Research Foundation and provincial grants are given to this organization to subsidize treatment in eight regional centres. Care is provided for the mentally ill in 17 institutions operated by the Province; these include special units for mental defectives, epileptics, the tubercular and the criminally insane. Community mental health services such as psychiatric wards in general hospitals, travelling clinics and child guidance centres have been widely developed by general and mental hospitals, municipal health departments and other agencies. The Ontario Alcoholism Treatment and Research Foundation operates a special treatment centre for alcoholics. •

A formal arrangement between the Province and the Ontario Medical Association makes limited medical services available to the recipients of all types of public assistance, including former means-test old age pensioners now receiving the universal pension, and

persons receiving old age assistance, blindness allowances, mothers' allowances, disabled persons' allowances and unemployment relief. New applicants for the universal old age pension may qualify under the medical plan on a means-test basis. With the exception of unemployment relief cases, where the costs are shared equally by the Province and the responsible municipality, the Province assumes the costs of such services which are paid on a fee-for-service basis from a special fund.

Provincial per diem grants which vary according to hospital size are paid to all public hospitals on the basis of public-ward bed days. Special per diem grants are also made by municipalities on behalf of hospitalized indigent residents, including public assistance recipients.

Manitoba.—The Health Branch of the Department of Health and Public Welfare includes Sections of Extension Health Services, Preventive Medical Services, Environmental Sanitation, Laboratory Services and the Division of Psychiatric Services.

Local preventive health services including health and laboratory and X-ray units are operated by the Health Extension Section which recovers part of the costs from the municipalities served. Public health services currently covering approximately one-third of the Province's population are provided through 13 full time units, each comprising a variable number of municipalities; another third of the population is covered by Winnipeg's health service facilities. In three health-unit areas prepaid diagnostic X-ray and laboratory facilities have been organized. Outside the health-unit areas the Provincial Nursing Service provides certain public health services. Mobile clinics provide dental services for children in rural areas.

Under a system of district organization for hospital facilities, 52 hospital districts have been established; all but two contain at least one general hospital augmented in many districts by one or more medical nursing units. Municipal prepayment plans for medical care operate in a number of medical-care districts.

Provincial mental institutions are operated at Winnipeg, Selkirk and Brandon and a school for the mentally defective at Portage la Prairie. Community mental health services are also conducted, including outpatient services at mental hospitals and child guidance clinics.

A provincially operated clinic at St. Boniface provides preventive and treatment services for venereal disease. Tuberculosis control is administered by the Sanatorium Board of Manitoba and services include diagnostic and travelling clinics, chest X-ray surveys and a rehabilitation program. The Province assists in the program by maintaining a Central Registry of Tuberculosis and a follow-up service for discharged patients carried out by public health nurses. The cost of hospitalization and treatment in sanatoria is met by provincial grants. The Manitoba Cancer Relief and Research Institute, which is subsidized by the Province, administers all cancer activities. A free cancer biopsy service is available and diagnostic services are provided to medically indigent rural residents. Radium and X-ray treatments are available without charge to rural residents and at a nominal charge to residents of Greater Winnipeg.

Laboratory services are provided through provincial laboratories at Winnipeg and Brandon. In addition the Department distributes to doctors, hospitals and government agencies, penicillin and other drugs for the treatment of venereal disease, insulin and other biologicals for indigents and antibiotics for tubercular patients.

The Provincial Government contributes a grant of \$1 per diem to general hospitals and lump sum grants to teaching hospitals. The government pays \$4.10 per day for patients in sanatoria to the Sanatorium Board of Manitoba.

Public assistance recipients in Manitoba are eligible for limited medical, dental and optical care, on a means-test basis, with the major share of the cost of services assumed by the responsible municipality. Hospital care is provided on a similar basis, municipalities making a per diem payment for persons with local residence, in addition to the provincial per diem grants. The Province assumes the cost of medical and hospital care provided to some indigents who are unable to establish local residence.

Saskatchewan.—The Saskatchewan Department of Public Health has five main Branches: Regional Health Services, Medical and Hospital Services, Psychiatric Services, Research and Statistics, and Administrative Services. The Health Services Planning Commission functions as an advisory and planning agency on major policy and administrative matters in the Department.

The Regional Health Services Branch includes Divisions of Communicable Disease Control, Child Health, Venereal Disease Control, Nursing Services, Dental Health, Nutrition and Sanitation. These Divisions organize province wide programs and provide consultative services to local health personnel. The Communicable Disease Control Division distributes free vaccines and sera, and supervises immunization programs. Four clinics for diagnosis and treatment are maintained by the Venereal Disease Control Division. Field services for venereal disease, tuberculosis, mental health and other public health programs are supplied by the Nursing Services Division. Public health laboratory services and the free distribution of certain drugs and biologicals are carried out by the Provincial Laboratories.

The Regional Health Services Branch is also responsible for the organization of health regions which are administered by locally elected health boards although staff is appointed and financial assistance is provided by the Province. Eight of the proposed regions are currently in operation. In addition to the general public health services provided in all regions the Swift Current Health Region has a prepaid medical care plan including general practitioner, specialist and diagnostic services for all residents, and limited dental services for children. The plan is financed by personal and property taxes with some Provincial Government contributions. Preventive dental health programs for children have been launched in other regions.

The Medical and Hospital Services Branch is responsible for the operation of the Saskatchewan Hospital Services Plan, administers the program of medical services to public assistance recipients, supervises the operations of the municipal doctor programs and the Air Ambulance Service, and administers a rehabilitation program for crippled children and poliomyelitis patients through the Physical Restoration Division. In addition to free hospital care, complete medical as well as dental and optical services, including some auxiliary services, are provided to the recipients (including spouses) of the universal old age pension who were formerly in receipt of the old age means-test pension or who can qualify for the provincial supplementary allowance. Persons and their dependants receiving blindness or mothers' allowances, social aid cases and provincial wards are also eligible. Drugs are provided subject to deterrent charges of 20 p.c. of the costs paid by patients. The Provincial Government meets the expenses under the medical program and for most of these cases the hospital insurance tax as well. Provincial subsidies of 25 cents per capita per annum and equalization grants are paid to over 100 municipalities with municipal doctor contracts.

The Psychiatric Services Branch supervises psychiatric hospitals and administers community psychiatric services including clinics. Free care and treatment is given for all mentally ill and mentally defective persons requiring hospitalization. The tuberculosis control program operated by the Saskatchewan Anti-tuberculosis League includes preventive and treatment services, the latter financed by provincial per diem grants and municipal levies. The Saskatchewan Cancer Commission co-ordinates all cancer control measures and operates publicly financed consultative, diagnostic and treatment clinics at Saskatoon and Regina.

Under the Saskatchewan Hospital Services Plan, which is a universal compulsory hospital-insurance scheme, most residents are eligible for inpatient public ward care by the annual prepayment of a personal tax of \$15 by all persons 18 years of age or over and of \$5 for each dependant under 18 years of age, with a maximum family tax of \$40. Additional funds are provided by the Province as needed from general revenue including, since April 1950, one-third of the proceeds of a 3 p.c. sales tax.

Alberta.—The Department of Public Health includes Divisions of Communicable Diseases and Health Units, Public Health Education, Hospital and Medical Services, Provincial Laboratories, Public Health Nursing, Social Hygiene, Sanitary Engineering, Cancer Services, Mental Health, Tuberculosis Control, Public Health Entomology, Nutrition Services and Vital Statistics.

For the provision of local health services the Province is divided into health-unit districts administered with Departmental supervision and financial aid by local boards of health composed of members appointed by local governments. Fifteen units are directed by full time medical health officers and one unit by a public health nurse. Outside the health-unit areas the Department operates a district nursing service in outlying communities and is generally responsible for health services in unorganized territory. The larger cities have their own full time health departments.

Free services regularly provided through Departmental clinics include diagnosis and treatment for venereal disease, medical examination for cancer, mental guidance and psychiatric examinations, X-ray examinations and tests for tuberculosis at stationary and travelling clinics, and mobile X-ray units. Provincial laboratory services at Edmonton and Calgary are available to all doctors and approved hospitals, and sera and biologicals are distributed for preventive work.

On the recommendation of provincial cancer clinics, surgical, X-ray and radium treatment, and hospitalization up to a limit of seven days for diagnostic purposes are provided by the Department. There are five provincial institutions for the mentally ill and one for mental defectives. Sanatoria care and treatment are provided without charge for all resident tubercular patients and outpatient pneumothorax services are also available. The Department bears the cost of hospital care for a period up to 90 days and medical treatment for rheumatoid arthritic patients under 25 years of age and provides all residents suffering from poliomyelitis with medical, surgical and hospital care and rehabilitation services. Provision has been made to extend treatment services to cerebral palsy patients. All maternity patients satisfying residence requirements may be hospitalized for a 12 day period at provincial expense and a provincial grant is authorized to assist those who receive maternity services at home.

By agreement with the Alberta College of Physicians and Surgeons and the Dental Association, medical, optical and some dental services are provided to all persons (and dependants) on the universal old age pension who were formerly in receipt of the means-test pension or who can qualify for the provincial supplementary allowance, as well as recipients of old age assistance, widows' pensions and blindness and mothers' allowances. The Province assumes the cost involved and also reimburses the municipalities for 60 p.c. of their expenditure on any medical care provided to local indigents. Public assistance recipients receive standard public ward care and necessary drugs, for which the Province pays reduced per diem rates.

A municipal hospital program provides standard hospitalization for a majority of the population of the Province. The plan is operated at the local level under provincial supervision, with costs distributed among the patient, the municipality and the Provincial Government. The patient is charged \$2 per day and the municipality meets the remainder of agreed charges for public ward care and extra services. The Provincial Government then reimburses the municipality for 50 or 60 p.c. of this amount, depending on the nature of the local program.

British Columbia.—The Health Branch of the Department of Health and Welfare consists of three bureaux, two located at Victoria and one at Vancouver. The Bureau of Local Health Services at Victoria includes Divisions of Health Units, Public Health Nursing, Public Health Engineering, Environmental Management, and Preventive Dentistry. The Central Administration Bureau, also at Victoria, includes Vital Statistics and Public Health Education. The Divisions of Tuberculosis Control, Venereal Disease Control and Laboratories form the Bureau of Special Preventive and Treatment Services located at Vancouver.

The provision of local public health services is on a health-unit basis. These units are administered and staffed by the Province but are jointly financed by the Province and the local municipalities concerned. Sixteen units, covering 50 p.c. of the population, are in operation. The cities of Vancouver and Victoria have their own health departments.

Special provincial public health services include tuberculosis clinics which provide free diagnostic and consultative service, venereal disease clinics which offer free diagnosis and treatment, and maternal and child health clinics operated by public health nurses which provide immunization and prenatal and postnatal advice. Public health laboratory facilities include a central laboratory at Vancouver and branch laboratories at Nelson and Victoria. Child dental clinics with local dentists participating are established in more than 60 communities, the costs being met equally by the community and the Province. In connection with mental health services the Province operates stationary and travelling child guidance clinics. A clinic of psychological medicine at the provincial hospital at Essondale functions as an investigatory and active treatment centre for short term patients.

Special cancer services including a treatment centre and a nursing home at Vancouver, consultative clinics located throughout the Province and a free province wide biopsy service have been developed by the British Columbia Cancer Foundation, an official agent of the Provincial Government. The Province pays the operating costs of the Foundation and helps finance voluntary programs concerned with the physical rehabilitation of the orthopaedically disabled, cerebral palsied children, the care and treatment of arthritides, and the maintenance of blood transfusion services.

Institutions for the care of tubercular and mental patients and infirmaries for persons with incapacitating disabilities are operated by the Province. Indigents are hospitalized in these institutions at public expense while other patients pay if financially able. Rehabilitation services are available to tubercular and mental patients.

Full medical, dental and optical care, prescribed drugs and some auxiliary services are provided to all persons (and their dependants) receiving the universal old age pension who were formerly on the means-test old age pension or who can qualify for the provincial supplementary allowance, and to recipients (including dependants) of old age assistance, blindness or mothers' allowances, local relief and to certain child wards. The Provincial Government assumes the costs of hospitalization for all such persons. Where they hold municipal residence the Province assumes 80 p.c. of the cost of the medical program, the remainder being shared by all municipalities on a population basis.

Public ward hospital services are available to all provincial residents through a public hospital care program administered by the Hospital Insurance Service. Before 1954 the plan was financed mainly by flat rate premiums, but costs now are met from general revenues and part of the provincial sales tax. Payment of \$1 for each day of hospitalization, with no maximum, is required of patients.

The Yukon and Northwest Territories.—Health services in the Yukon and Northwest Territories are provided through a network of services by different government agencies, by the churches and, in some settled areas, by private practitioners. Services for the native population are maintained by the directorate of Indian Health Services of the Department of National Health and Welfare, for the white population by the Yukon Territorial Government, the Northwest Territories Council, and the Department of Northern Affairs and National Resources and for the Armed Forces by the Department of National Defence.

There are four general hospitals with a capacity of 151 beds in the Yukon Territory—at Whitehorse and at Mayo which are operated by the Territorial Government, at Dawson, operated by the Roman Catholic Church and another at Whitehorse by the Department of National Defence. Of the six private physicians in the Territory, three are employed on a part time basis as medical health officers by the Territorial Government and one by the Directorate of Indian Health Services. There are three dentists in the Territory, one of whom does part time work for Indian Health Services.

There are 11 hospitals and eight nursing stations in the Northwest Territories with a combined total of 648 beds, of which about 461 are used for tuberculosis patients. Six hospitals at Aklavik, Chesterfield Inlet, Fort Simpson, Fort Resolution, Fort Smith and Fort Rae are operated by the Roman Catholic Church; two hospitals at Aklavik and Pangnirtung and one nursing station at Hay River are operated by the Church of England. The Yellowknife Administrative District operates one hospital and two others are maintained by mining companies at Port Radium and Norman Wells. The Department's Indian Health Services maintains six nursing stations and the Pentecostal Church operate one at Hay River. There are 11 physicians in the territory, nine of whom are employed by Indian Health Services, eight public health nurses and two dentists of whom six and one respectively are employed by Indian Health Services.

In the Yukon Territory health services for the non-native population are administered through the Commissioner for the Yukon. The Territorial Government provides complete treatment including transportation for tuberculosis and poliomyelitis patients and hospital care for indigent residents. Grants are made to cover the operating deficits of the two general hospitals owned by the Territorial Government. Public health services provided include communicable disease control, public health nursing, sanitary inspection, and tuberculosis case-finding. Technical advice on the public health program is given by a part time Chief Medical Health Officer resident at Edmonton.

Health programs for the non-native population in the Northwest Territories provide free treatment including transportation for tuberculosis patients, free hospital care for the mentally ill, free treatment for venereal disease cases, and free cancer diagnosis including transportation to the Edmonton Clinic. Indigent residents are eligible for complete medical, dental and optical services as well as general hospital care. There is a special program of free dental services for children under 17 years of age. To support the mission hospitals the Territorial Government pays per diem grants on behalf of all paying patients. Public health services are largely handled by Indian Health Service personnel, the Director of Indian Health Services serving as Chief Medical Health Officer of the Northwest Territories.

Section 2.—National Health—Special Phases

Included in this Section are special articles giving detailed information, statistical and analytical, on two important phases of national health in Canada—mental health and tuberculosis. Also included is an article of topical interest dealing with the production and distribution of poliomyelitis vaccine.

MENTAL HEALTH*

Today mental health is one of Canada's foremost public health problems. At the end of 1954 the 68,157 patients in Canadian mental institutions or under their care exceeded by approximately 53,000 those under the care of tuberculosis sanatoria and by nearly 10,000 those in public hospitals. The 1954 total represents a 93.2 p.c. increase over the 1932 figure and indicates that just over four persons out of every thousand are undergoing institutional care for mental illness. To this large volume of institutional care must be added the increasing amount of psychiatric treatment given by mental health clinics, outpatient departments of general hospitals and private physicians.

The provision of services for the care of psychiatric patients is a constitutional responsibility of the provincial governments. Each of the ten provinces administers its own program as laid down in its provincial legislative enactments; the Federal Government provides consultative and specialist services and assists in the financing of provincial mental health programs through the National Health Program.

* Prepared by B. R. Blishen, Chief, Institutions Section of the Health and Welfare Division, Dominion Bureau of Statistics, with the assistance of Dr. C. A. Roberts, Principal Medical Officer—Mental Health, Department of National Health and Welfare, Ottawa.

By far the greatest proportion of the resources used in promoting mental health in Canada today is expended on the care and treatment of the institutionalized patient although, with increasing public recognition of the dimensions of the problem of mental health, more emphasis is being placed on the prevention and early treatment of mental disorders. Through measures such as professionally organized and directed public education programs, mental health clinics and the utilization of many other community resources, progress is being made in changing public attitudes towards mental illness and in promoting opportunities for the development of mental health.

THE DIMENSIONS OF THE PROBLEM

Of the 68,157 patients on the books of mental institutions at the end of 1954, 62,323 were in hospital, 87 p.c. more than the 33,290 reported in hospital at the end of 1932. A more precise measure of the volume of patients actually resident in institutions is obtained from the rate per hundred thousand population, a figure that increased from 317.2 to 410.9 during the 1932-54 period. Of the patients institutionalized at the end of 1954, 56.0 p.c. were admitted on the certificate of one or more doctors in accordance with provincial law and 24.1 p.c. were voluntarily admitted on their own application. The changing public attitude towards the treatment of mental illness is reflected in the increasing proportion of voluntary admissions which rose to its present level from 6.7 p.c. ten years ago.

Some indication of the demand for institutional services is obtained from a study of first admissions and re-admissions to mental institutions. Compared with 1932, admissions more than trebled* by 1954 and the admission rate per hundred thousand population rose from 90.1 to 193.5 (Table 2). A significant feature of this rate is that, though it increased only 9.7 p.c. from 1932 to 1944, it showed a 90.0 p.c. advance from 1945 to 1954.

* Newfoundland data were first included in 1949; admissions in that Province have not exceeded 1.7 p.c. of the Canadian total in any year of their inclusion.

¹ Per 100,000 population.

The increasing volume of cases requiring institutional care is reflected in the rate per hundred thousand population for first admissions and for re-admissions, although it is evident that the latter are increasing at a faster rate than the former. From 1932 to 1954 the rate for first admissions increased 87.0 p.c. while the rate for re-admissions increased 230.0 p.c. The postwar increase in both rates was very marked; first admissions increased 72.8 p.c. from 1945 to 1954 but advanced only 5.8 p.c. from 1932 to 1944; similarly the rate for re-admissions rose by 148.9 p.c. from 1945 to 1954 compared with 26.4 p.c. in the 1932-44 period (Table 2). (*See also* Chart opposite).

In comparison with the increasing admission rates, the proportion of deaths in mental institutions showed a substantial decline from 70.5 per hundred thousand in 1932 to 53.7 in 1954.

In the five year period 1950-54 there was no change in the four leading causes of first admission to mental institutions. The leading cause over this period was schizophrenia with a 1954 admission rate of 22.1 per hundred thousand population. This disorder is more prevalent in the age group 20 to 40 years, the highest rate of 60.2 being evident among males of 20 to 29 years. The second leading cause of first admission was senile and cerebral arteriosclerosis, having a rate of 13.2; the age group 70 or over showed the highest rate, 215.3, and in this age group the male rate of 227.7 exceeded the female rate of 202.7. The third-ranking cause of first admission was mental deficiency with a rate of 22.3 and the fourth was manic depressive psychosis with a rate of 17.8. Alcoholism without psychosis which ranked tenth as a cause of first admission in 1950 was fifth in 1952. Alcoholic psychosis however showed the opposite trend, moving from ninth in 1950 to eleventh in 1954. The increasing importance of alcoholism without psychosis as a cause of first admission provides evidence that alcoholism is being treated as an illness in itself and that patients receive treatment before becoming psychotic.

MENTAL HOSPITAL FACILITIES

In order to care for the increasing number of patients there has been a 65.0 p.c. expansion in the bed capacity of Canadian mental institutions since 1932. The past five years alone have seen a 20.5 p.c. increase over the 1950 total of 45,081 beds (Table 2). In 1954 mental hospitals with 42,592 beds had 78.4 p.c. of the psychiatric bed capacity, training schools 14.3 p.c., psychiatric hospitals 4.6 p.c. and psychiatric wards in general hospitals 1.0 p.c. The other 2.7 p.c. were in epilepsy hospitals and miscellaneous institutions. Although the capacity of psychiatric wards is relatively small at present, increasing emphasis is being placed on this type of psychiatric accommodation for short term cases.

Despite the increase in number of psychiatric beds provided in various types of mental institutions, the Canadian population has increased at such a rate that the number of beds per hundred thousand population actually declined from an alltime high of 374.3 in 1945 to a record low of 328.2 in 1949. It is significant that the present rate of 358.3 is appreciably below the record set in 1945 (Table 2 and Chart opposite).

When the bed capacity rate is compared with the patient population rate it is obvious that the latter is greatly in excess of the former. The shortened length of stay however enables mental hospitals to care for more patients. In 1934 for example patients who were discharged had a median hospital stay of 5.4 months but in 1954 the median stay was 1.8 months. Thus in 1954 three patients could be treated in the bed required to accommodate one patient in 1934.

MENTAL INSTITUTIONS IN CANADA 1932-54

RATE PER 100,000 POPULATION

RATE PER 100,000 POPULATION

3.—Median Length of Stay of Patients Discharged from Mental Institutions 1932-54

(Excludes deaths)

Year	Length of Stay	Year	Length of Stay	Year	Length of Stay
	Mos.		Mos.		Mos.
1932.....	4.9	1940.....	4.9	1948.....	3.9
1933.....	5.2	1941.....	5.9	1949.....	3.6
1934.....	5.4	1942.....	6.3	1950.....	3.6
1935.....	5.0	1943.....	4.3	1951.....	2.4
1936.....	4.0	1944.....	3.8	1952.....	2.8
1937.....	4.2	1945.....	3.8	1953.....	2.1
1938.....	4.5	1946.....	3.6	1954.....	1.8
1939.....	4.4	1947.....	3.6		

It is reasonable to assume that this shorter median stay can be attributed in part to current developments in the treatment of psychiatric disorders such as shock therapy, narco-synthesis, psychosurgery and other types of therapy. It is obvious too that a patient today receives more care than he would have at any time in the past: this is shown by the size of the full time staff employed in mental institutions; at Dec. 31, 1954 the number per hundred patients was 31.2 as compared with 19.7 at the end of 1932.

COSTS OF INSTITUTIONAL CARE

The growing volume of institutional care for psychiatric disorders has inevitably been accompanied by heavier costs. In 1932 expenditures by mental hospitals totalled just over \$10,500,000, a figure that had risen to over \$57,200,000 in 1953 (Table 4). Compared with the expenditures of other types of health institutions, this 442 p.c. increase does not appear disproportionate; it was exceeded by an increase of 708 p.c. in the expenditures of public hospitals in the same period and by an increase of 527 p.c. in the expenditures of tuberculosis sanatoria. The total bill for 1953 for all three types of institution amounted to \$316,500,000 and of that amount public hospitals accounted for 71.7 p.c., tuberculosis sanatoria for 10.2 p.c., and mental hospitals for 18.1 p.c.

A useful figure in a historical comparison of hospital expenditures is the cost per patient-day. The figure for all types of health institutions rose from \$1.85 in 1932 to \$6.81 in 1953, an increase of 268 p.c. The cost per patient-day for public hospitals recorded the greatest increase of 279 p.c. from \$2.98 to \$11.29, that for tuberculosis sanatoria was 173 p.c. from \$2.29 to \$6.25 and that for mental hospitals 207 p.c. from 88 cents to \$2.70. In terms of 1935-39 dollars however the cost per patient-day in 1953 should be deflated by almost 50 p.c.

4.—Expenditure and Cost per Patient-Day for Mental Institutions compared with other Health Institutions 1932-53

¹ Excludes capital expenditure; includes outpatient expenditure. includes only days spent in institutions which reported finances.

² Includes patient-days of newborn; ³ Estimate.

An obvious factor contributing to the rise in hospital expenditure is the increase in population and the consequent increase in admissions. From 1932 to 1954 the population of Canada increased by 44.5 p.c. and the number of admissions to mental institutions rose by 210.4 p.c.

From 1948 a total of over \$37,000,000 has been made available to the provinces by the Federal Government for the expansion and improvement of preventive, diagnostic and treatment services in the field of mental health. Of this amount over \$24,000,000 or 65 p.c. was actually expended. Nearly half the expenditures were used to develop institutional services.

CLINIC SERVICES

Mental health clinics are playing an increasingly important role in combating mental disorders. They are operated by a variety of agencies, including provincial health departments, municipalities, mental institutions, general hospitals, school boards and voluntary organizations. There is no uniform pattern of operation—some are operated on a full time basis, some part time, and some travel from place to place.

During 1954 a total of 88 mental health clinics were in operation in Canada. Statistics, available for 77 of the clinics, show that more than 208,000 interviews were held with 41,258 patients, an average of just over five interviews per patient and that more than two-thirds of the patients had not attended the same clinic during a previous year. Although comparative figures are not available for earlier years the preponderance of new patients indicates that these clinics are providing a needed service to the community. In 1954 they employed a staff of 759 persons, 26.6 p.c. of whom were nurses, 23.0 p.c. were psychiatrists, 17.0 p.c. were social workers and 14.0 p.c. were psychologists.

It is quite apparent that statistics alone cannot give a full picture of the developments taking place in the field of mental health, that the quality of services available and their relationship to those needing treatment is of equal importance in any study of the problem. Each province attempts to meet its need in its own way but across Canada there is general evidence of increasing emphasis being placed on research, on improved methods of treatment and on the training of personnel, the ultimate goal of which is to mitigate the prevalence of mental illness and thereby to decrease the demand for hospital beds and facilities.

TUBERCULOSIS*

During the past two decades great progress has been made in the fight against tuberculosis in Canada but though improved treatment methods, extended facilities and strengthened control measures have produced significant results the disease still remains a major public health problem.

At the end of 1954 one hundred out of every hundred thousand Canadians were patients in tuberculosis sanatoria or units of general hospitals. In 1938 the rate stood at 78—the lowest on record—but increased each year until 1952 when it reached a peak of 111. The 1954 rate, the lowest in seven years, also reflects the reversal of a rising trend in the absolute number of patients in tuberculosis hospitals. The trend began in 1938 and the 1954 total of 15,220, which was 5.2 p.c. lower than that for the preceding year, was the first decrease ever reported.

ADMISSIONS TO SANATORIA

During the period 1938-54 total tuberculous and non-tuberculous admissions to Canadian tuberculosis institutions increased 66.2 p.c.; first admissions increased 59.2 p.c. and re-admissions increased 88.6 p.c. The increases in the actual number of admissions are partly accounted for by the 36.4 p.c. increase in the Canadian population during the same period but, when the numbers are converted into rates and the effect of the population increase thereby eliminated, the increase in the rate of admissions is also found to be significant. The total rate for tuberculous and non-tuberculous admissions rose from

* Prepared by B. R. Blishen, Chief, Institutions Section of the Health and Welfare Division, Dominion Bureau of Statistics.

85.8 per hundred thousand population in 1938 to 113.0 in 1946 and then declined to 104.6 in 1954 (*see* Table 5). The 1954 rate was the lowest since 1945 but was 21.9 p.c. above the rate for 1938.

The rates for tuberculous admissions alone increased more moderately during the 1938-54 period, from 77.2 per hundred thousand population to 89.4. The 1954 rate was the lowest recorded since 1944 and was the fifth consecutive annual decrease. Non-tuberculous admissions recorded their lowest rate of 6.8 per hundred thousand population in 1942 and advanced to an alltime high of 15.2 in 1954. The 2,312 patients producing the 1954 rate represent nearly 14.5 p.c. of all admissions to tuberculosis institutions in that year, the highest proportion ever recorded (*see* Table 5).

When studied separately, the rates per hundred thousand population for tuberculous first admissions and for tuberculous re-admissions show important parallels (*see* Chart opposite). The first admission rate rose from 55.5 in 1937 to 77.2 in 1946 and then declined somewhat erratically to a low of 62.7 in 1954, the lowest since 1939 and less than 13 p.c. higher than the 1937 rate. Similarly the tuberculous re-admission rate increased from a low of 19.5 in 1938 to an alltime high of 32.8 in 1950 and declined sharply to 26.7 in 1954 but represented nevertheless a 37 p.c. increase over 1938. The importance of these decreasing rates is evident when the population increase of 36 p.c. during this period is borne in mind.

¹ Excludes British Columbia.

INCIDENCE AND MORTALITY

The decrease in the tuberculosis notification rate has been comparatively slow, dropping from a 1944 high of 128.2 per hundred thousand population to 69.1 in 1954 (*see* Table 6 and Chart, p. 256). This slow decline in notifications plus the increasing rate of non-tuberculous admissions to tuberculosis institutions has had the effect of slowing up the decline in total admission rates.

The 1937-54 period witnessed a phenomenal decrease in the tuberculosis death rate. That rate stood at 10.3 per hundred thousand population in 1954 compared with 60.4 in 1937 (*see* Table 6 and Chart, p. 256), and in the ten year period 1945-54 alone dropped 71.8 p.c. A corresponding trend took place in the number of tuberculosis deaths occurring in tuberculosis institutions, the decrease amounting to 62.4 p.c. in the same period.

Expressed as a rate per thousand patients under care at Dec. 31 the deaths of tuberculous patients in tuberculosis institutions declined radically from 227.5 in 1943 to 53.0 in 1954.

Year	Notifications		Mortality		Year	Notifications		Mortality

CONTROL MEASURES

The postwar declines in the first admission and re-admission rates for tuberculosis, in notifications and in tuberculosis mortality have been matched by corresponding increases in tuberculosis control measures. The bed complement of tuberculosis institutions increased from 85.2 per hundred thousand population in 1938 to 116.5 in 1954.

The increase from 1946 to 1954 in actual number of beds set up was 4,089 or 30.1 p.c. (see Table 7, below). The percentage occupancy of these beds varied erratically during the 1938-54 period but the 1954 figure of 92.2 was the highest since 1941. A comparison of the tuberculous admission rate per hundred thousand population with a similar rate for bed complement shows that whereas the former began declining in 1950 and has dropped steadily since then, the latter continued to climb until 1951 when it reached an alltime high of 131.5 and exceeded the tuberculous admission rate by almost 34 per hundred thousand population. In 1954 beds exceeded tuberculous admissions by just over 27 per hundred thousand.

There is statistical evidence that beds for tuberculous patients are being occupied for longer periods in recent years (see Table 7) and in the period 1944-54 the average stay of tuberculous patients who were finally discharged rose by slightly more than 50 days. An even more significant increase was evident in the average stay of tuberculous patients who died in tuberculosis institutions; in the same period their average stay increased by 150 days. It should be noted that the lengthening stays of tuberculous discharges and of those who died increased 20.3 p.c. and 43.5 p.c. respectively since 1944 and were most pronounced since 1950. From that year to 1954 the average stay of tuberculous discharges rose 16.4 p.c. and of tuberculous deaths 30.6 p.c.

The increases in average stay of discharges and deaths have followed the introduction of the antibiotics streptomycin, PAS, and isoniazid. The use of streptomycin was first reported in 1947 when 0.01 p.c. of the patients received this treatment; in 1954 the figure stood at 80.7 p.c. In 1949, PAS was first reported and 0.1 p.c. of the patients received it; in 1954 the percentage rose to 74.0. Isoniazid was first reported in 1952 as being given to 4.5 p.c. of the tuberculous patients; two years later the figure had risen to 49.7 p.c.

In recent years there has been greatly increased activity in case-finding programs. From 1944 to 1954 an increase of 353.2 p.c. occurred in the number of examinations made by X-ray surveys although small declines were reported for 1952 and 1953. In terms of examinations per thousand population, the rate of 44.7 in 1944 rose to 145.8 in 1951, declined to 130.7 in 1953 and rose again to 134.4 in 1954. In the same period a 70.4 p.c. increase was reported in the number of cases of tuberculosis newly diagnosed by clinics and dispensaries.

The treatment of tuberculous patients and the services and facilities provided have required increasing staff and increasing expenditures. The increase in sanatoria personnel during the 1938-54 period amounted to 190.5 p.c. and number of personnel per 100 patients rose from 42.2 to 78.4. Expenditure in non-federal sanatoria increased 464.9 p.c. from \$5,700,000 in 1938 to \$32,200,000 in 1953, while the cost per patient-day increased by 171.7 p.c. from \$2.30 to \$6.25 (see Table 4, p. 253).

7. Bed Complement, Occupancy and Stay of Tuberculous Discharges, and Deaths in Tuberculosis Institutions 1938-54

Year	Bed Complement	Percentage Occupancy	Average Days' Stay of—

POLIOMYELITIS VACCINE*

One of the most dramatic health developments in Canada during 1954-55 was the commencement of large scale immunization with Salk vaccine against poliomyelitis.

Analysis of poliomyelitis incidence in Canada over a number of years shows the increasing occurrence of this disease as a cause of disability and death. In 1953 more cases and more deaths were reported than in any previous year, a total of 8,736 cases, 4,963 with some degree of paralysis, and 481 deaths. The average annual attack rate reported over the five years ended in 1929 was approximately five cases per 100,000. This figure rose to eight for the five years ended in 1934, to 14 for the five year period ended in 1949 and to 26 for that ended in 1954. Since 1949 when paralytic and non-paralytic cases were first reported separately the number of cases with paralysis have been about half the reported total and the death rate has not changed significantly in proportion to that for total cases. There has been however an increasing tendency for older age groups to be attacked. In 1926, 70 p.c. of deaths occurred in children under fifteen. By 1953 this proportion had dropped to 30 p.c. In 1953, 31.6 p.c. of reported cases, 31.4 p.c. of those with paralysis and 60.9 p.c. of deaths occurred in persons over age twenty.

The increasing seriousness of the problem has been under consideration at all levels of government and funds from the National Health Program have been extensively used for the development of facilities for treatment; more than a million and a half dollars have been utilized for this purpose since the commencement of the Program in 1948.

Immediately after the 1952 announcement of results obtained in field trials with gamma globulin for protection against paralytic poliomyelitis, steps were taken to assure supplies of this blood fraction for use in 1953. Reserve stocks of wartime blood serum, collected by the Red Cross and held by the Connaught Laboratories at Toronto, were used with assistance from the federal grants to make approximately 30,000 0.5-cc. doses available for use in the 1953 epidemic. A further 100,000 doses were prepared from blood collected by the Red Cross for use in 1954. Over \$1,000,000 was utilized through the National Health Program for this purpose.

DEVELOPMENT AND TESTS

In 1952 Dr. Jonas E. Salk described his method of preparing experimental poliomyelitis vaccine by employing formaldehyde to destroy the disease producing ability of the virus. In this discovery Canadian scientists had made an important contribution as the culture fluid used in the manufacture of the vaccine for Dr. Salk's first trial was developed in the Connaught Laboratories. This chemical medium, known as Mixture 199, which was a by product of cancer research, does not contain organic materials that might cause allergies. It was found suitable for the growing of polio virus at the Hospital for Sick Children in Toronto in 1952.

In 1953, at the request of the National Foundation for Infantile Paralysis, workers at the Connaught Laboratory developed a method for mass production of all three types of polio viruses by the use of minced monkey-kidney tissue immersed in Mixture 199. During late 1953 and early 1954 large amounts of virus culture were shipped to the United States for processing into vaccine.

* Prepared in the Research Division, Department of National Health and Welfare, Ottawa.

On the invitation of the National Foundation for Infantile Paralysis in the United States consideration was given to Canadian participation in the United States field trials held in 1954* in which about 1,830,000 children were involved. Three groups of children in the Provinces of Nova Scotia, Manitoba and Alberta were included in the trials.

The question of production of vaccine in Canada was considered at the 65th meeting of the Dominion Council of Health in May 1954. The immediate need, should the United States trials prove successful, was estimated at that time and provincial deputy ministers of health were provided with data on costs (\$1.50 per triple dose) and quantities of the vaccine which might be available to each.

Planning at that time and subsequently was complicated by uncertainty as to the results of the field trials but close attention to the situation in the United States generally indicated that at least sufficient success would be attained to justify extensive production of vaccine. In discussions with the Provinces during the summer of 1954 it was agreed that vaccine produced for use in 1955 and supplied free to all children would be financed by the Federal Government and the Provinces on a fifty-fifty basis through the use of funds from the National Health Program. Between June and November all provinces submitted projects under the program. Production of sufficient vaccine for 500,000 children in 1955 was commenced at the Connaught Laboratories and discussions began with the Institute of Microbiology and Hygiene where the building of special accommodation was commenced for this purpose.

PRODUCTION AND DISTRIBUTION

At the 66th meeting of the Dominion Council in October 1954 the United States evaluation trial was reviewed in detail. The Director of the Connaught Laboratories reported that no known complications or serious reaction had resulted from use of the vaccine among a quarter of a million children, that significantly high antibody titres had been encountered and that no adverse reaction had been ascertained from the introduction of *Rhesus* monkey tissue. He pointed out however that there were many serious problems associated with the use of the vaccine which would require extensive research to solve.

After consideration of this report the Council endorsed the decision to proceed with preparations for the distribution of vaccine on an experimental basis and reached agreement as to the circumstances under which it might be used. The following statement of principles was adopted by the Council at that time:—

- (1) That priority in the receipt of the vaccine be reserved for children in the five and six year age groups, it being noted that attack rates at these ages are high and that infection in these children constitutes a threat to older children. The number of children in kindergarten, primary and grade 1 of Canadian schools is estimated to be approximately 500,000 in 1955. In addition, the implied obligation to give vaccine to children who received the "control" material in the vaccine trials in three provinces in 1954 be recognized.
- (2) That, in the event further vaccine should be available after meeting requirements of (1) above, the four year old group should receive next priority.
- (3) That, while the desirability of recording the incidence of paralysis in vaccinated and unvaccinated children in these age groups should be noted, the administration of the vaccine does not need to be accompanied by the administration of a "control" material or the taking of blood specimens for antibody estimation.
- (4) That, since it was to be expected the vaccine would be available for distribution by early March, it would be highly desirable to complete the course of injections of the vaccine not later than the end of April, if the necessary permission for distribution is obtained from the Federal authority.
- (5) That, it should be understood that pending publication of results of the current Poliomyelitis Vaccine Evaluation study, the use of the vaccine remains on an experimental basis and should not be offered to the public as a proven immunizing measure.

* In the United States trials about 440,000 children received one or more injections of vaccine and about 210,000 a placebo substance consisting of the nutrient material in which the virus was grown. Over 1,100,000 children in 44 States served as observed controls. About 40,000 children from these three groups gave one or more and generally three blood samples which were tested for poliomyelitis antibodies in 27 laboratories in the United States and Canada.

Arrangements were made at the end of 1954 for all polio vaccine produced to be delivered to the Laboratory of Hygiene of the Department of National Health and Welfare for testing and forwarding to the Provinces. Experience gained the previous year in the production and distribution of gamma globulin proved a useful guide in making these administrative arrangements.

Testing of the vaccine followed the pattern laid down in the Minimum Standards issued by the National Institutes of Health in the United States and involved the use of 18 monkeys for each batch, 12 *Rhesus* being injected intracerebrally with 0.5 cc. on each side, and six *Cynomolgus* with 10 cc. intramuscularly. Tissue cultures, guinea pigs, rabbits, mice and egg embryos were used for additional tests.

On Apr. 12, 1955 the Deputy Minister of National Health attended the meeting at Ann Arbor, Michigan, at which the results of the 1954 field trials were announced and arrangements for release of the vaccine were commenced immediately the results of the trials were known. Approximately 620,000 triple doses had already been produced. Requests had been received from the Provinces for sufficient material for 486,000 triple doses and the excess was divided among them. Through adoption of the revised dosage schedule suggested by Dr. Salk and postponement of the third dose it was possible to increase by 50 p.c. the number of children who might receive the vaccine in 1955.

In April American firms were approached to ascertain what amount of vaccine might be shipped to Canada prior to July 1 and two American firms were licensed to release vaccine in Canada. However, though Canada was not included in the embargo placed by the United States on export of the vaccine, only about 14,000 3-cc. ampoules were actually brought into Canada.

Although distribution programs in the provinces varied slightly there was general adherence to the principles suggested by the Dominion Council; special provision was made for inoculation of Indian and Eskimo children and for dependants of Canadians serving abroad.

Close attention was paid to the difficulties that arose in the United States following the commencement of the program and testing methods were kept under constant review. Fortunately no similar difficulties arose in Canada before the advent of the polio season made it appear advisable to suspend the program for the summer months, by which time about 800,000 Canadian children had received inoculations.

Section 3.—Health Statistics*

Compared with the well established and highly standardized vital and institutional statistics, other national health statistics are still in an early developmental stage in Canada as well as in most other countries. Only in recent years, with recognition of the increase in life span and the impact of the ageing of the population, has it become generally understood that mortality and communicable disease statistics can no longer serve as the sole yardstick by which to measure a nation's health. Though many infectious diseases have been effectively controlled, other diseases, particularly those characteristic of an older population, cause much illness and disability, requiring a large volume of health services, without becoming immediately fatal and thus without being adequately reflected in mortality statistics.

A good deal of valuable statistical material exists in some provinces regarding certain aspects of their health services. Nationally the only source available so far on general illness, health services, and personal expenditure for health care is the Canadian Sicknes

* Prepared in the Public Health Section of the Health and Welfare Division, Dominion Bureau of Statistics.

Survey 1950-51. Statistics on causes of death are shown in the Chapter on Vital Statistics, pp. 215-216, and statistics of hospitals, mental and tuberculosis institutions are dealt with in Section 4 of this Chapter. Other health statistics collected nationally deal with notifiable diseases, illness among about 100,000 federal Civil Servants, and home nursing services. Following are some details on the Canadian Sickness Survey and notifiable disease reporting.

Subsection 1.—Canadian Sickness Survey

The Canadian Sickness Survey 1950-51.—This survey, carried out during a 12 month period commencing in the autumn of 1950, sought to give estimates of the incidence and prevalence of illness and accidents of all kinds, the amount of medical, nursing and other health care received, and the volume of family expenditures for the various types of health services. The information on which the estimates are based was obtained from a nationwide sample of approximately 10,000 households. The survey was planned and organized jointly by the federal Department of National Health and Welfare (who initiated the program), and the Dominion Bureau of Statistics, in consultation with the ten provinces, whose health departments carried out the survey under the federal National Health Program. A brief outline of the scope and methods of the survey was given in the 1955 Year Book together with some of the results. Study of the data still continues.

During the year 1955 further results of the survey became available, shedding more light on the pattern of sickness among Canadians and of the health care they receive. The results lend new emphasis to the health problems of the older age groups—which are also demonstrated by the data obtained from the study of illness in the Civil Service and from statistics on home nursing services—and indicate the relatively high amount of illness and demand for health services at the other extreme of the age scale: the children under 15 years of age.

Estimated Incidence and Prevalence of Illness in Canada During the Survey Year.—In regard to the severity of illness, the following tables distinguish between any illness, whether disabling or non-disabling, and disabling illness which prevents the patient continuing his usual activity, e.g. working, going to school, homemaking, etc. Incidence is measured by the number of new illnesses commencing during the survey year and the persons reporting these illnesses. Prevalence, on the other hand, measures the number of illnesses in progress at the exact time the survey began and the number of persons reporting illness at that time. It follows that though incidence does not reflect the duration of illness, illnesses of longer duration will affect the prevalence.

INCIDENCE OF ILLNESS BY AGE GROUP AND SEX 1950-51

Permanent Physical Disabilities.—Each case of permanent disability disclosed by the Sickness Survey was assigned to one of four groups according to the extent to which performance of usual functions was affected. These groups, which include chronic disabilities, deformities and amputations, are as follows: (1) minor disabilities which did not interfere too much with day to day functioning of employment; (2) moderate disabilities having only a localized effect on conduct of daily employment; (3) severe disabilities which interfered considerably with work but as a result of which the individual was not totally disabled; (4) total disabilities which confined the individual to bed or where assistance was required in carrying out the functions of everyday living. The following statement shows the age distribution of the estimated number of permanently physically disabled persons for all severity groups and for the severely or totally disabled. It should be noted that the Survey, by design, excluded persons residing in institutions.

Age Group	All Severity Groups		Severely or Totally Disabled	
	No.	p.c.	No.	p.c.
ALL AGES.....	957,000	100	423,000	100
Under 25.....	139,000	15	37,000	9
25-44.....	238,000	25	88,000	21
45-64.....	317,000	33	136,000	32
65 or over.....	263,000	27	162,000	38

Six types of health conditions were responsible for 58 p.c. of all primary disabilities reported: heart disease, impairment resulting from accidents, arthritis and rheumatism, deafness, blindness, disorder of the nervous system.

Volume of Health Care.—The estimated percentage of persons receiving certain health services for the various age groups is given in the two tabular statements on p. 263 together with the average amount of services per 1,000 population. Physicians' calls include doctors' home and office calls and outpatient clinic visits by the patient but not doctors' calls at the hospital. School clinic visits and treatments are excluded. Examinations for spectacles exclude those by a physician, which are included in physicians' calls.

More than one-half the population—53.1 p.c.—reported some health care during the 1950-51 Sickness Survey year. Of those reporting, 57.7 p.c. were females, and in the 25-44 year age group the reporting percentage for females was 65.2 p.c. For males, the smallest proportion for all combined categories of health care was found in the 15-24 age group with 42.6 p.c. and the largest proportion in the "under 15" group, who accounted for 52.5 p.c. of the health care reported.

ESTIMATED NUMBER OF PERSONS REPORTING HEALTH CARE AS PERCENTAGE OF TOTAL PERSONS IN EACH AGE GROUP 1950-51

Other Selected Data Showing the Impact of Age on Health.—A continuing study of medically certified illness of about 100,000 employees of the Federal Civil Service for the fiscal year ending Mar. 31, 1954 shows the following average duration of illness by the patient's age:

AVERAGE DURATION OF ILLNESS BY AGE GROUP

Age Group	Number of Days Duration
Under 35.....	11.2
35-49.....	14.7
50 and over.....	21.3

The following statement, based on the same study of illness in the Civil Service, shows the percentage of days of illness accounted for by a few selected causes in various age groups:—

PERCENTAGE OF DAYS OF ILLNESS BY SELECTED CAUSES AND BY AGE GROUP

<i>Cause</i>	<i>Age Group—</i>		
	<i>Under 35</i>	<i>35-49</i>	<i>50 or over</i>
	<i>p. c.</i>	<i>p. c.</i>	<i>p. c.</i>
ALL CAUSES.....	100.0	100.0	100.0

65 or over.....	18.3	47.1	61.7

Notifiable Diseases.—The method of collecting notifiable disease statistics has been outlined in the 1955 Year Book, pp. 246-247, and numbers of cases and rates per 100,000 population of selected notifiable diseases are reported on pp. 248-249 of the same edition.

The number of reported cases of certain notifiable diseases has been decreasing fairly steadily in recent years, including the year 1955. These diseases are: diphtheria, erysipelas, smallpox, tuberculosis, typhoid and paratyphoid fevers, and venereal diseases. The year 1954 was free from major epidemics.

Based on recorded numbers of cases reported since 1924 the incidence of poliomyelitis has been very erratic and is unpredictable from one year to another. The Chart below shows the trend of reported incidence of poliomyelitis during recent years. The year 1955 shows the lowest rate since 1945 but this cannot entirely be ascribed to the widespread introduction of vaccine for the first time in all provinces. Four provinces—Ontario, Manitoba, Saskatchewan and Alberta—accounted for 7,230 cases, or 81 p.c. of all reported cases in Canada during the epidemic of 1953, the alltime peak year since national figures were first recorded. The Province of Manitoba bore the brunt of this epidemic as indicated by an attack rate of 286.4 per 100,000 compared with the national rate of 60.2 per 100,000. In 1954 the Manitoba rate showed a drop to 13.8 per 100,000. (*See also, Special Article, Poliomyelitis Vaccine, pp. 258-60.*)

¹ Exclusive of Yukon and Northwest Territories.² These diseases are not reportable in provinces indicated.³ Includes cases where type was not specified.⁴ Includes cases of septic sore throat, epidemic.⁵ Type not specified.⁶ Includes chancroid, granuloma inguinale and lymphogranuloma venereum.⁷ Based on official estimates of population (see p. 151).⁸ Less than 0.1 per 100,000 population.

Subsection 2.—Health Institutions*

Hospitals in Canada could have accommodated one in every hundred Canadians at the end of 1953. The 151,485 beds, their gross capacity, were distributed among 1,143 hospitals according to figures reported to the Dominion Bureau of Statistics.† In addition to those actually reporting to the Bureau there were 45 public hospitals with a capacity of 3,466 beds and 93 private hospitals with a capacity of about 1,500, so that the grand total of all known hospitals in the country was 1,281, with space for about 156,500 beds exclusive of bassinets for newborn infants. These hospitals may conveniently be classified into three categories according to admission policy: public, which admit any patient; private, which admit only paying patients; and federal, which treat special groups. They may also be classified into four categories according to the type of condition treated: general, treating basically all forms of physical illness; special, treating particular types of illness such as chronic conditions or communicable diseases; mental, treating psychiatric disorders; and tuberculosis sanatoria.

Table 11 cross-classifies these two sets of characteristics in each province, showing the number of hospitals and their capacity in each classification. The table excludes the above mentioned non-reporting hospitals and also excludes bassinets. It will be observed that Ontario had the greatest number of hospitals, followed in order by Quebec, Saskatchewan and British Columbia.

Table 12 presents summary statistics for 1949 to 1953 of public and private general and special hospitals.

* Prepared in the Institutions Section of the Health and Welfare Division, Dominion Bureau of Statistics.

† More detailed information may be found in DBS publications: *Hospital Statistics 1953*, Vols. I and II; *Mental Health Statistics 1954* and *Financial Supplement*; *Tuberculosis Statistics 1954* and *Financial Supplement*.

¹ Includes newborn.² 69 public hospitals reporting other information did not report finances.

Mental Institutions.—Data on movement of patients and personnel number for the 96 mental institutions that reported to the Dominion Bureau of Statistics in 1954 are given in Table 15. Table 16 presents revenue and expenditure for 72 of those institutions; financial statistics were not reported by one municipal hospital in Nova Scotia, one provincial and one lay hospital in Quebec, one federal hospital in each of Ontario and Quebec and the 19 psychiatric units.

Government and municipal payments made up 82.6 p.c. of all the revenue received by mental institutions and salaries accounted for 58.1 p.c. of the total maintenance expenditure. (New buildings and improvements took 12.0 p.c. of the expenditure in 1952. Prince Edward Island, with only one institution reporting, was the only province showing no expenditure for this item. Ontario's outlay amounting to \$5,070,039, accounted for 20.8 p.c. of all its 1952 expenditure for this purpose.)

¹ Figures incorporate data for 1953 for two hospitals in Nova Scotia and for 1953-54 for one in Manitoba and seven in British Columbia which did not submit later data.

Tuberculosis Institutions.—Of the 17,683 beds set up (known as bed complement) in tuberculosis sanatoria and tuberculosis units only 13,798 or 78.0 p.c. were located in public sanatoria, 2,248 beds or 12.7 p.c. were located in units of other hospitals, and 1,637 or 9.3 p.c. were in Federal Government sanatoria. Data in Table 18 relating to movement of patients cover all three groups but the data on personnel and on hospital facilities relate to the two groups of sanatoria only, excluding units in other hospitals. The financial data in Table 19 include only the public sanatoria, excluding all units and all federal sanatoria.

¹ Includes all institutions operated by the Provincial Division of Tuberculosis Control.

Federal Government Hospitals.—Under the terms of the British North America Act health and welfare is the special responsibility of the provinces. Nevertheless the Federal Government is responsible for the health of certain groups such as war veterans and members of the Armed Forces, newly arrived immigrants, Indians and Eskimos, and lepers. The Federal hospitals are administered by three departments of government: in 1953 the Department of Veterans Affairs administered 19; the Department of National Defence, 9; the Department of National Health and Welfare's Indian Health Service, 18; and the Department of National Health and Welfare's Quarantine and Sick Mariners' Service, 10.

Table 20 gives summary statistics of these hospitals for 1953.

PART II.—PUBLIC WELFARE AND SOCIAL SECURITY*

Responsibility for social welfare in Canada has rested in large part on the provinces which in turn have delegated an important share of this responsibility to the municipalities. Though constitutional authority has not changed, except with respect to unemployment insurance and old age pensions, the financial participation of the Federal Government has been greatly extended in the past two decades in the provision of income maintenance payments.

The creation of the Department of National Health and Welfare in 1944 established for the first time in the Federal Government a department in which public welfare is a major responsibility. The Department is charged with the administration of federal Acts relating to welfare which are not assigned by law to other departments. In addition

* Except as otherwise indicated, this Part was prepared in the Research Division, Department of National Health and Welfare, Ottawa.

to the general promotion of social welfare, the Welfare Branch of the Department administers the family allowances program, the old age security program and the federal aspects of old age assistance, allowances for blind persons and the new program of aid to disabled persons. Grants to the provinces to promote physical fitness were introduced in 1943 but the Act providing for them was repealed in June 1954.

Unemployment insurance is administered by the Unemployment Insurance Commission; welfare and health services for veterans by the Department of Veterans Affairs; and the welfare of Indians and Eskimos by the Department of Citizenship and Immigration and the Department of Northern Affairs and National Resources, respectively.

Administration and financial responsibility in other fields of welfare such as mothers' allowances, child protection and general assistance or relief are left entirely to the provinces and their local subdivisions.

Section 1.—Federal Government Programs

Subsection 1.—Family Allowances

The Family Allowances Act was introduced in 1944 as a basic social security measure designed to assist in providing equal opportunity for all Canadian children. The allowances involve no 'means test' and are paid entirely out of the Federal Consolidated Revenue Fund. They are not part of taxable income although persons with children eligible for family allowances obtain a smaller income tax exemption for such children than for children not so eligible.

Allowances are payable in respect of every child under the age of 16 years who was born in Canada or has been a resident of the country for one year, or whose father or mother was domiciled in Canada for three years immediately prior to the birth of the child. Monthly payment is made normally to the mother although any person who substantially maintains the child may be paid the allowance on his behalf. The allowances are paid at the monthly rate of \$5 for each child under 6 years; \$6 for each child from 6 to 9 years; \$7 for each child from 10 to 12 years; and \$8 for each child from 13 to 15 years. The allowances are paid by cheque, except for Eskimo children and a group of Indian children for whom payment is made largely in kind because of lack of exchange facilities in remote areas and the need for education in the use of nutritive foods.

If it is satisfactorily shown to the authorities that the allowances are not being spent for the purpose outlined in the Act payment may be discontinued or made to some other person or agency on behalf of the child. Allowances are not payable for any child who fails to comply with provincial school regulations or on behalf of a girl who, although she is under 16 years of age, is married.

Family allowances are administered by the National Director of Family Allowances of the Department of National Health and Welfare through Regional Directors in offices located in each provincial capital. A Welfare Section in each regional office deals with welfare questions arising out of the administration of allowances. A Supervisor of Welfare Services advises each Regional Director and reports through him to the Chief Supervisor of Welfare Services, who acts in a similar advisory capacity to the National Director. The actual preparing and issuing of the cheques is the responsibility of the treasury division of each regional office which reports to the Chief Treasury Officer of the Department of Finance with the Department of National Health and Welfare.

The Regional Director for the Yukon and Northwest Territories, located at Ottawa, is responsible for payments to families in those areas. Close co-operation is maintained with the Departments of Citizenship and Immigration and of Northern Affairs and National Resources which are responsible for the welfare of Indians and Eskimos, respectively (*see* Population Chapter, pp. 173 and 174).

Subsection 2.—Old Age Security*

Under the Old Age Security Act (R.S.C. 1952, c. 200), effective January 1952, a universal pension of \$40 a month is payable by the Federal Government to all persons aged 70 or over, subject only to a residence qualification. Residence requirement is 20 years immediately preceding commencement of pension with certain temporary absences allowed. Where the applicant has not so resided for the complete 20 years the periods of absence may be made up by having been present in Canada, prior to the 20 year period, for double the periods of absence; for these persons there is a further requirement of one year's residence immediately preceding the commencement of the pension.

Payment of the pension is suspended when the pensioner leaves Canada. On his return the pension may be resumed and, if absences have not exceeded six months, payment may then be made retroactively for as many as three months of absence in any calendar year.

* The Old Age Pensions Act of 1927 under which old age pensions were paid jointly by the Federal and Provincial Governments, ceased to be effective Dec. 31, 1951, at which time all recipients thereunder were automatically transferred to the rolls of the universal pension under the Old Age Security Act 1951.

The program is financed on a pay-as-you-go basis. Payment of the pension is made from the Consolidated Revenue Fund and charged to the Old Age Security Fund account. The income of the Old Age Security Fund is derived from three sources. First, there is a 2 p.c. tax on personal taxable income, that is, on income less exemptions and deductions; the maximum tax per person is \$60 per annum. The fund also receives the amount collected by a special 2 p.c. tax on corporate taxable income and the proceeds of a 2 p.c. sales tax. Temporary loans may be made to the Old Age Security Fund, subject to repayment as directed. Operations of the Fund are shown in Table 2.

¹ Program in effect for the last three months only of the fiscal year.

² In the Budget Speech of Apr. 6,

1954 it was announced that this sum was being written off against the reserve for possible losses on active assets.

³ In the Budget Speech of Apr. 5, 1955 it was announced that the 1953-54 loan would be written off by a grant from the Consolidated Revenue Fund for the fiscal year 1954-55 and that the 1954-55 loan would be handled in the same way in the fiscal year 1955-56.

The program is administered by the National Director of Old Age Security of the Department of National Health and Welfare through the ten regional offices established in connection with the payment of family allowances. The two programs are administered largely by the same personnel.

Persons in receipt of old age assistance who reach age 70 are transferred to the universal pension rolls without further action on their part. Other persons make application to the Regional Director located at their provincial Capital. The Regional Director for the Yukon and Northwest Territories is located at Ottawa.

In Alberta, British Columbia and Saskatchewan the provincial governments make supplementary payments to recipients of old age security who qualify under a means and residence test. In Alberta and British Columbia the allowance cannot exceed \$15 per month; in Saskatchewan, it is a flat \$2.50 per month rising to a maximum of \$20 per month for certain recipients. In some provinces and in the Yukon, recipients of the pension who are in special need may also receive relief.

Subsection 3.—Government Annuities*

Under the Government Annuities Act (R.S.C. 1952, c. 132), passed in 1908, the Federal Government carries on a service to assist Canadians to make provision for old age. The Act is administered by the Minister of Labour.

A Canadian Government annuity is a fixed yearly income purchased from and paid by the Government of Canada. The annuity is payable in monthly instalments for life, or for life and guaranteed for a period of years. The minimum annuity is \$10 and the maximum \$1,200 a year or the actuarial equivalent if the annuity is to reduce by the amount of payments under the Old Age Security Act. Annuity contracts may be deferred or immediate. Deferred annuities are purchased by periodic or single premiums. Immediate annuity contracts provide immediate income. Annuities may now be arranged to reduce by \$40 per month at age 70 to fit in with payments under the Old Age Security Act.

The property and interest of the annuitant are neither transferable nor attachable. In the event of the death of the annuitant before a deferred annuity vests, all money paid is refunded with interest to the purchaser or his legal representative. Provision is made in the Act for group annuity contracts whereby employers may contract for the purchase of annuities on behalf of their employees, or associations on behalf of their members, the purchase money being derived partly from wages and partly from employer contributions. Group annuity plans now in effect cover a variety of industries and many municipal corporations throughout Canada. Annuities arising from individual contracts are taxable as to the interest portion of the annuity payment and the return-of-capital portion is exempt; annuities arising from approved pension plans are fully taxable but the employee and the employer are entitled to tax exemption year by year on their annual contributions to the pension plan.

* Revised in the Government Annuities Branch, Department of Labour, Ottawa.

From Sept. 1, 1908, the date of the inception of the system, to Mar. 31, 1955 the total number of annuity contracts and certificates issued excluding replacements was 393,232. On the latter date 68,130 annuities were being paid amounting to \$32,766,286 annually and 281,531 deferred annuities were being purchased. The net total amount of purchase money received up to Mar. 31, 1955 was \$906,261,559.

Up to Mar. 31, 1955, 966 corporations, institutions and associations, as compared with 949 up to Mar. 31, 1954, had entered into agreements with the Government to purchase annuities. Under these arrangements 164,012 employees or members were holding certificates for purchase of deferred annuities as compared with 147,523 one year earlier. The number of certificates issued under groups in the year 1954-55 was 18,300 as compared with 13,161 for 1953-54.

4.—Government Annuities Contracted and Purchase Money Received, Years Ended Mar. 31, 1936-55

Subsection 4.—Other Federal Government Programs

Unemployment Insurance and National Employment Service.—In 1940, by an amendment to the British North America Act, the Federal Government was given jurisdiction in the field of unemployment insurance and the Unemployment Insurance Act was passed, establishing a national system of unemployment insurance which is outlined in Chapter XVIII.

The National Employment Service is operated in conjunction with the unemployment insurance scheme. It is administered through local employment and claims offices and supervised by the Department of Labour. Statistics of positions offered and placements made are given in Chapter XVIII.

Prairie Farm Assistance.—The Prairie Farm Assistance Act is administered by the Department of Agriculture; a description of the legislation is given in Chapter IX.

Welfare Services for Indians and Eskimos.—The welfare of Indians and Eskimos is administered by the Department of Citizenship and Immigration and the Department of Northern Affairs and National Resources, respectively; this field is covered in the Population Chapter, pp. 173 and 174.

Section 2.—Federal-Provincial Programs

Unemployment Aid.—Discussions took place at a federal-provincial conference called in April 1955 to consider the problem of relief for needy unemployed persons not covered by unemployment insurance. This was followed by technical sessions at which various suggestions for sharing the costs were considered. In June the Prime Minister reported to the House of Commons that provincial representatives had decided to consider with their governments a modified federal proposal under which the Federal Government would accept one-half the cost of relief for the number of unemployed in each province in excess of 0.45 p.c. of the population, with certain adjustments being made to accommodate special situations in some provinces. This starting point would make it unnecessary for the Federal Government to make any distinction between persons who are employable and those who are not employable. Following consideration by the provinces the details of the plan are to be embodied in agreements with each province joining therein.

Subsection 1.—Old Age Assistance

The Old Age Assistance Act (R.S.C. 1952, c. 199), effective January 1952, provides for federal financial aid to the provinces for assistance to persons aged 65 or over subject to a residence qualification of at least 20 years. The payment of old age security commencing at age 70 makes old age assistance effective from ages 65 to 69. Within the limits of the federal Act each province is free to fix the amount of the maximum assistance payable, the maximum income allowed and other conditions of eligibility. The Federal Government's contribution per recipient cannot exceed 50 p.c. of \$40 per month or of the assistance paid, whichever is less.

For an unmarried person the total income allowed including assistance cannot exceed \$720 a year; for a married couple, \$1,200 a year; where the spouse is blind within the meaning of the Blind Persons Act the total income of the couple cannot exceed \$1,320 a year. The exact pension payable in each case depends on the amount of outside income and the resources of the applicant and his spouse. To be eligible for assistance the applicant must not be in receipt of an allowance under the Blind Persons Act or the War Veterans Allowance Act. The applicant must have resided in Canada for at least 20 years immediately preceding the commencement of the assistance but may have certain temporary absences; where the applicant has not so resided for the 20 years he must have been physically present in Canada prior to the 20 years for a total period equal to twice the total of the absences during the 20 years.

The program became effective in January 1952 in all areas except Newfoundland, Yukon Territory and the Northwest Territories where the effective date was Apr. 1, 1952. The maximum assistance is \$40 per month in all provinces and territories except in Newfoundland where it is \$30 per month. Administrative responsibility is vested in the province; the provincial plan must be approved by the Governor in Council. Assistance is paid by the province with federal reimbursement.

In Alberta, British Columbia and the Yukon Territory the provincial or territorial governments make supplementary payments to recipients of old age assistance who qualify under a means and residence test. In Alberta and British Columbia the allowance cannot exceed \$15 per month and in the Yukon it cannot exceed \$10 per month. In some provinces recipients of old age assistance who are in special need may also receive relief.

7.—Old Age Assistance Statistics by Province, Years Ended Mar. 31, 1954 and 1955

Subsection 2.—Allowances for the Blind

The Blind Persons Act (R.S.C. 1952, c. 17), effective January 1952, was amended in 1955 to lower the eligible age and to increase the income limits. The Act as amended provides for financial aid to the provinces toward the provision of allowances to blind persons aged 18 (formerly 21) or over. Within the limits of the federal Act each province is free to fix the amount of the maximum allowance payable and the maximum income allowed. The Federal Government's contribution per recipient cannot exceed 75 p.c. of \$40 per month or of the allowance paid, whichever is less.

For an unmarried person, the total income allowed including the allowance cannot exceed \$960 (formerly \$840) a year; for an unmarried person with one or more dependent children, \$1,160 (formerly \$1,040); for a married couple, \$1,560 (formerly \$1,320) a year; where the spouse is also blind the total income of the couple cannot exceed \$1,680 (formerly \$1,440) a year. The exact allowance payable in each case depends on the amount of outside income and the resources of the applicant and his spouse. To be eligible for an allowance the applicant must not be in receipt of assistance under the Old Age Assistance Act, of an allowance under the War Veterans Allowance Act, of a pension under the Old Age Security Act or of a pension in respect of blindness under the Pensions Act. The applicant must have resided in Canada for at least 10 years immediately preceding the commencement of the allowance but may have certain temporary absences; where the

applicant has not so resided for the 10 years, he must have been physically present in Canada prior to the 10 years for a total period equal to twice the total of the absences during the 10 years.

The program became effective in January 1952 in all provinces and in the Yukon and Northwest Territories. Administrative responsibility is vested in the province but the provincial plan must be approved by the Governor in Council. The allowances are paid by the province with federal reimbursement.

In Alberta, British Columbia, Saskatchewan and the Yukon Territory, the provincial or territorial governments make supplementary payments.

¹ Estimated population as at June 1 of each year for the Provinces and 1951 Census data for the Territories.

A description of the pensions payable to blind persons under the Old Age Pensions Act 1927, repealed in 1951 (and replaced by the Old Age Assistance Act, effective January 1952) will be found in the 1951 Year Book, pp. 234-235. The final statistics of operations under that program are given in the 1952-53 Year Book, p. 267.

Subsection 3.—Allowances for Disabled Persons

Under the Disabled Persons Act (2-3 Elizabeth II, c. 55) of June 26, 1954, effective January 1955, the Federal Government provides financial aid to the provinces toward the provision of allowances to persons aged 18 or over who are totally and permanently disabled.* Within the limits of the Federal Act each province is free to fix the amount of the maximum allowance payable and the maximum income allowed. The Federal Government's contribution per recipient cannot exceed 50 p.c. of \$40 per month or of the allowance paid, whichever is less.

For an unmarried person, the total income including the Federal allowance cannot exceed \$720 a year; for a married couple the limit is \$1,200 a year except that if the spouse is blind within the meaning of the Blind Persons Act, the aggregate income of the couple cannot exceed \$1,320 a year. The exact allowance payable in each case depends on the amount of outside income and the resources of the applicant and spouse. To be eligible for an allowance the applicant must not be in receipt of an allowance under the Blind Persons Act or the War Veterans Allowance Act, assistance under the Old Age Assistance Act, a pension under the Old Age Security Act, or a mother's allowance under provincial legislation. The applicant must have resided in Canada for at least 10 years immediately preceding the commencement of the allowance but may have had certain temporary absences; where the applicant has not so resided for the 10 years, he must have been resident in Canada prior to the 10 years for a total period equal to twice his absences in that period.

An applicant is considered to be totally and permanently disabled when he is suffering from a major physiological, anatomical or psychological impairment, verified by objective medical findings. The impairment must be one that is likely to continue without substantial improvement during his lifetime and one to which the concept of cure cannot be applied. Also the person must be severely limited in activities pertaining to self-care and normal living as a result of the impairment. However an applicant is not deemed to be permanently and totally disabled when a favourable rehabilitation prognosis is obtained or approved therapeutic measures are recommended by the provincial authority, and the necessary rehabilitation services or therapeutic measures are available.

The provincial authorities must suspend the payment of the allowance when in its opinion the recipient unreasonably neglects or refuses to comply with or to avail himself of training, rehabilitation or facilities provided by or available in the Province.

The allowance is not payable to a patient or resident in a mental institution, tuberculosis sanatorium, home for the aged, infirmary or institution for the care of incurables. A recipient who is resident in a nursing home or a private, charitable or public institution is eligible for the allowance only if the major part of the cost of his accommodation is being paid by himself or his family. When a recipient is required to enter a public or private hospital the allowance may be paid for no more than 62 days of hospitalization in a calendar year. For the period that a recipient is in hospital for therapeutic treatment for his disability or rehabilitation as approved by the provincial authority the allowance may continue to be paid.

* The Provinces of Newfoundland, Ontario and Alberta have operated their own programs for needy disabled persons since 1949, 1952 and 1953, respectively. All three programs continue and now receive reimbursement from the Federal Government in accordance with the terms of the new federal-provincial program.

Agreements became effective January 1955 in all provinces except Newfoundland and British Columbia when the effective date was April 1955. The maximum allowance is \$40 per month in all provinces. Administrative responsibility for the program is vested in the province and the provincial plan must be approved by the Governor in Council. The allowances are paid by the province with federal reimbursement.

9.—Statistics on Allowances for Disabled Persons by Province, Year Ended Mar. 31, 1955¹

Province or Territory	Recipients in Month of March	Average Amount of Allowance Monthly	Federal Government Contribution During Year
	No.	\$	\$
Newfoundland ²
Prince Edward Island ³
Nova Scotia	285	33.39	12,141
New Brunswick	177	39.46	8,183
Quebec ³

Manitoba	45	39.66	8,188
Saskatchewan	36	37.52	1,806
Alberta ³
British Columbia ²
Totals, Five Provinces	7,166	39.12	419,379

¹ Program in effect for the last three months of the fiscal year only.

² Program became effective Apr. 1, 1955.

³ By Mar. 31, 1955, no payments had yet been made by the Federal Government to this province, in which the program became effective Jan. 1, 1955. Payments for April 1955 will include certain amounts retroactive to Jan. 1, 1955.

Subsection 4.—National Physical Fitness Program

The National Physical Fitness Act was repealed in June 1954 but seven provinces and the Northwest Territories continued to receive financial assistance from the Federal Government until the expiry of their agreements on Mar. 31, 1955. The Act had provided that an amount not exceeding \$232,000 annually be granted to the provinces on a matching per capita basis for the promotion of physical fitness and recreation programs. The amounts made available to the individual provinces are shown in the 1954 edition of the Year Book, p. 253. With the repeal of the Act, the National Council on Physical Fitness, which it established, ceased to function.

During 1954-55 the Physical Fitness Division continued to function within the Department of National Health and Welfare, providing a variety of professional, consultative, and informational services for federal and provincial government departments and national organizations. It acted as a clearing house for the dissemination of information and provided material on fitness, recreation, physical education, sports, hobbies, drama, and other cultural activities and on the organization and administration of community and specialized programs in Canada and other countries. The Preview Library Service for visual aids was continued and extended to five centres in the Northwest Territories. Close liaison was maintained with other countries and with the Commonwealth in particular.

With the cessation of services under the National Physical Fitness Act the Assistant Director of Physical Fitness was appointed Consultant, Fitness and Recreation, office of the Deputy Minister (Welfare), Department of National Health and Welfare.

Subsection 5.—Training Programs

Under the Vocational Training Co-ordination Act of 1942 (R.S.C. 1952, c. 286) the Federal Department of Labour, in co-operation with the provincial governments, carries on various training projects. Details of these schemes will be found in Chapter XVIII, Section 6.

Section 3.—Provincial Programs

Subsection 1.—Mothers' Allowances

All provinces have statutory provision for allowances to enable certain needy mothers to remain at home to care for their dependent children. The total cost of this assistance is paid from provincial funds except in Alberta where a portion of each allowance is charged to the municipality of residence. In Newfoundland the Mothers' Allowances Act was repealed and the Mothers' Allowances program incorporated in the Social Assistance Act 1954 which became effective Apr. 1, 1955.

Subject to the conditions of eligibility which vary from province to province the allowances are payable to applicants who are widowed or whose husbands are mentally incapacitated and, except in Alberta, to those whose husbands are physically disabled and unable to support their families. They are also payable, except in Nova Scotia, to deserted wives who meet specified conditions; in several provinces to mothers who have been granted a divorce or legal separation and in some to unmarried mothers. Adoptive mothers and foster mothers are also eligible under certain circumstances. In 1955 Saskatchewan made provision for an allowance to be paid under certain conditions on behalf of a mother or child confined to a hospital or sanatorium. In 1955 also Ontario extended the same mothers' allowances benefits to Indian mothers as to other residents of the Province.

The age limit for children is 16 years except in Manitoba where it is 15 years and in Newfoundland where it is 17 years. Provision is made in most provinces to extend payment for a specified period if the child is attending school or if he is physically or mentally handicapped.

In all provinces applicants must satisfy conditions of need and residence but both the amount of outside income and resources allowed and the length of residence required prior to application vary considerably, the latter for example from one year in Saskatchewan, Ontario and Newfoundland to five years in Quebec. All provinces require that the applicant be resident at the time of application and generally that the child or children live with the recipient, and most provinces require that they continue to live in the province while in receipt of an allowance. In the six provinces in which British or Canadian nationality is a condition of eligibility the applicant may qualify for mothers' allowances if the mother or father or child meet the specified provisions.

In each province the relevant Act is administered by public welfare authorities. Most provinces have a mothers' allowances board or commission which makes the final decision regarding eligibility and the amount of allowance granted, or acts in an advisory capacity. In some provinces local advisory committees are also appointed. Rates of benefit as of June 1955 are given in Table 10, pp. 290-291 and the number of families and children assisted and amounts of benefits paid as at Mar. 31, 1953, 1954 and 1955 are given in Table 11.

10.—Maximum Monthly Rates under Provincial Mothers' Allowances Legislation, June 1955

Province	Mother and One Child	Each Additional Child	Disabled Father at Home	Family Maximum	Supplementary
Nfld.....	\$25	\$5	\$10	There is no limit to the number who may benefit	Up to \$30 monthly if necessary for care and maintenance
P.E.I.....	\$25	\$5	No additional allowance granted	\$50	None granted
N.S.....	No set maximum; rates are based on average family income for community in which family lives		No special provision; included in budget on which allowance is based	\$80	None granted
N.B.....	\$35	\$10	No additional allowance granted	\$80	Director may grant an additional \$10 for rent if circumstances require it but only if allowance paid is below maximum
Que.....	\$35 (population under 5,000) \$40 (population 5,000 or over)	\$1 for 2nd, 3rd, 4th, 5th \$2 for 6th, 7th \$3 for each subsequent child	\$5	None set (Minimum granted \$5)	Those beneficiaries whose income and allowance are insufficient to meet their needs may obtain a special monthly allowance under the Public Charities Act. These allowances are paid through social agencies
Ont.....	\$50 for mother and one child \$24 for foster mother and one child	\$10 with \$48 for foster mother and 2 children, \$10 for each additional foster child	\$10	None set	\$20 where need is apparent to the Director. A fuel allowance of up to \$24 a month may be granted from Sept. 1 to Mar. 31

Man.....	\$51	\$10.00 for child aged 1-6 years \$13.00 for child aged 7-11 years \$15.50 for child aged 12-14 years (subject to deductions for fourth and each additional child)	\$17.25	\$150 (\$167.25 if disabled father at home)	Up to \$25 where necessary. Fuel allowance granted for seven months
Sask.....	\$40 for mother and one child \$30 for guardian and one child	\$10 for 2nd \$5 for each subsequent child (with parent or guardian)	\$10 (also if confined to a nursing home or sanatorium)	\$90 (\$100 if disabled father at home)	The local municipality may grant supplementary aid under the Social Assistance program. Costs are shared between the Province and municipality on a 50-50 basis. In unorganized territories the Province assumes full cost
Alta.....	\$50 (An allowance of \$80 may be granted when income or assistance does not exceed \$120 per year)	\$20 for 2nd child \$15 for 3rd child \$10 for 4th to 9th	Not applicable	\$145	Municipalities of residence may grant additional aid 60 p.c. of the cost of which is reimbursed by the Province. In unorganized territories the Province assumes full cost
B.C.....	\$42.50 plus \$27 from Social Allowance funds	\$7.50 plus \$6.50 from Social Allowance funds	\$7.50 plus \$6.50 from Social Allowance funds	A maximum is set but there is no limit to the number who may benefit	Extra expenditures for additional needs such as repairs and emergencies; also for dietary extras, housekeeper services, prenatal allowances and certain assistance to TB patients and contacts are met through Social Allowance funds. Costs shared by Province and municipalities on 80-20 basis but Province meets total cost of provincial cases and of prenatal allowances

¹ In Newfoundland the Mothers' Allowances program was incorporated in the Social Assistance Act, effective Apr. 1, 1955.

11.—Mothers' Allowances by Province as at Mar. 31, 1954-55

Subsection 2.—Provincial Welfare Services

The care and protection of neglected and dependent children, care of the aged, social assistance or relief, and other special welfare services are governed by provincial legislation although in many areas responsibility for services rests with municipal or voluntary organizations. Though the programs and the methods of financing vary considerably most provinces share the costs of some or all of the municipal services in organized areas and assume the total cost in unorganized territories. The medical services available to social assistance recipients are described at pp. 236-248, mothers' allowances are dealt with in the immediately preceding subsection, old age assistance at pp. 284-285, allowances for the blind at pp. 285-287 and allowances for totally and permanently disabled persons at pp. 287-288. The social assistance or relief programs described in the following summary are those in effect prior to any agreements which may be made as a result of federal-provincial discussions on unemployment aid (*see* p. 283).

Newfoundland.—Provincial welfare services are administered by the Department of Public Welfare through a number of regional welfare centres.

Child Care and Protection.—Child welfare has developed largely as a public service and is administered by the Child Welfare Division. Neglected children, made wards of the Director, are placed in foster or adoptive homes or in institutions. The Department pays for the maintenance of wards, grants subsidies for children admitted to orphanages administered by religious organizations, and contributes towards the cost of educating blind and deaf-mute children in institutions outside the Province. The Division operates an Infants' Home, providing short term care.

The Division of Corrections, established in 1953, deals with juvenile delinquents and adult offenders and administers correctional institutions for boys and girls. The Corrections Act, 1953 provides for the establishment of a Youth Guidance Authority, an Adult Guidance Authority and classification centres.

Care of the Aged.—The Province maintains a Home for the Aged and Infirm at St. John's and also pays in whole or in part the cost of maintaining needy old people in the Salvation Army Home, in licensed boarding homes or in private homes.

Social Assistance.—Under the Social Assistance Act of 1954, which came into effect in April 1955, assistance is provided to the categories previously dealt with under the Dependents' Allowances Act and the Mothers' Allowances Act. Aid for certain needy able-bodied persons is provided under the Health and Public Welfare Act. For a number of years the Provincial Government provided pensions for needy disabled persons; since Apr. 1, 1955 the Province has participated in the new federal-provincial scheme for totally and permanently disabled persons (*see pp. 287-288*).

Prince Edward Island.—The Department of Health and Welfare is responsible for the administration of provincial welfare services.

Child Care and Protection.—Under the Children's Protection Act, neglected or delinquent children are placed under the guardianship of the Director of Child Welfare. They are cared for in inspected foster or adoptive homes, boarding homes or children's institutions. Provincial grants are made to child welfare agencies and to the two private orphanages, one Protestant and one Roman Catholic. Juvenile Courts are under the Attorney General's Department, and juvenile delinquents are cared for at the expense of the Department of Health and Welfare in correctional institutions of neighbouring provinces.

Care of the Aged.—The aged and infirm are cared for in Falconwood Mental Hospital and in two provincial infirmaries.

Social Assistance.—The Department provides direct social assistance in rural areas and by agreement assumes 50 p.c. of the cost of assistance granted by the City of Charlottetown and the incorporated towns and villages. The Department also operates a province-wide program of financial aid to families where the breadwinner is suffering from tuberculosis and is unable to support the family.

Nova Scotia.—Provincial welfare services are administered by the Department of Public Welfare through a number of regional offices.

Child Care and Protection.—The Child Welfare program, including the inspection of institutions and the licensing of foster and maternity homes, is under the Director of Child Welfare. The Director supervises the 12 Children's Aid Societies to whom child care and protection is delegated and directly administers the program in the four areas in which societies are not organized. By court decision a neglected child may be made a ward of the Director or of a Children's Aid Society. Each Society receives annually a provincial grant of up to \$2,000; a sum equal to 50 p.c. of funds received through private campaigns or from municipalities for general operating expenses; and an additional grant of not less than \$1,000, the maximum determined on a per capita basis. The cost of maintaining wards is shared by the Province and municipality of residence.

The Department operates the Nova Scotia Training School for mentally defective children and the Nova Scotia School for Boys for juvenile delinquents. It is also responsible for the operation of the six Juvenile Courts and the supervision of their probation staffs. The municipality of residence is responsible for the maintenance of children in reformatories although the Province may contribute also if the reformatory complies with specified standards.

Care of the Aged.—The aged are cared for in municipal or county homes, in homes operated by religious or private organizations and in private boarding homes where the municipality of residence may contribute to the cost of maintenance. Homes for the aged are subject to provincial inspection but they do not receive direct financial assistance from the Province.

Social Assistance.—Relief to unemployables is a local responsibility under the Poor Relief Act except in the cities of Halifax and Sydney which provide welfare relief under their charters.

New Brunswick.—The Department of Health and Social Services administers provincial welfare legislation.

Child Care and Protection.—Under the Children's Protection Act, administered by the Minister of Health and Social Services, responsibility for protection and placement services is largely delegated to Children's Aid Societies. Guardianship of a neglected child may be vested in a Society, in the Director of Child Welfare or in the Court. Orphanages are operated by religious, private or municipal organizations. Boarding homes, with some exceptions, are licensed and are subject to the provincial inspection required for all child care institutions. The Province and the municipality of residence each contributes towards the maintenance of wards committed to an institution, and the Province also reimburses municipalities for one-half of the cost of maintaining wards placed in foster homes, up to a prescribed maximum. The Department may place blind or deaf-mute children in special schools outside the Province. Juvenile Courts are under the Attorney General's Department and delinquent boys may be placed in the Provincial Industrial School for Boys which reports to the Minister of Health and Social Services.

Care of the Aged.—Homes for the aged are operated under municipal, religious, fraternal or private auspices and are subject to provincial inspection but they receive no direct financial support from the Province.

Social Assistance.—Relief to unemployables is a local responsibility and is generally discharged through the provision of institutional or indoor relief to those in need. Outdoor relief is provided in certain centres.

Quebec.—Major responsibility for the administration of provincial welfare measures is shared by the Department of Health and the Department of Social Welfare and Youth. The former administers the Quebec Public Charities Act which embodies the Government's policy of granting subsidies to religious and private institutions where they exist rather than creating public services. Grants are made to these institutions on a per diem basis with the Province, the municipality of residence and the institution sharing the cost of maintenance of indigent persons admitted for care. The Department of Social Welfare and Youth is responsible for preventive and rehabilitative work among neglected and dependent children and for grants to recreation and welfare agencies in addition to certain important educational functions. Social Welfare Courts are however under the jurisdiction of the Department of the Attorney General.

Child Care and Protection.—Needy or abandoned children are generally cared for in institutions such as orphanages, nurseries and other homes, assisted under the Quebec Public Charities Act, although there is an increasing use of foster homes by child welfare agencies. However children who are found by a Social Welfare Court or other court to be particularly exposed to moral or physical dangers may be admitted to recognized youth protection schools administered by the Department of Social Welfare and Youth. Municipalities of residence are required by law to contribute 50 p.c. of the operating and maintenance costs of these schools but in practice the Province pays approximately 87 p.c. of all expenses and the entire cost of new construction. The Social Welfare Courts have statutory responsibility in connection with child and youth protection and certain other provincial programs and also serve as Family Courts.

Children who have been exposed to tuberculosis but who have not been infected are placed with rural families under the supervision of the Department of Health in co-operation with child welfare agencies.

Care of the Aged.—Institutional care for indigent old people is provided under the Quebec Public Charities Act through private institutions. Under the same Act family welfare agencies administer home allowances to needy old people who do not require institutional care.

Social Assistance.—Assistance is given under the Public Charities Act, usually in the form of institutional care. The Department of Colonization operates a program whereby families in need are settled on the land in newly opened districts and granted financial aid until they become self-supporting. In these areas a disability pension scheme is linked to a program of free medical services.

Ontario.—Provincial welfare services are administered by the Department of Public Welfare. The Province is divided into 17 welfare districts each in charge of a supervisor.

Child Care and Protection.—Three major child welfare Acts were amended and consolidated in a single new Child Welfare Act in 1954. The Act is administered by the Child Welfare Branch which supervises the local Children's Aid Societies to which responsibility for the care and protection of neglected and dependent children is delegated. Annual provincial grants to these Societies include token grants in addition to grants equal to 25 p.c. of the amounts raised through voluntary effort. In addition the Province reimburses the municipalities of residence in amounts not exceeding 25 p.c. of the net cost of maintaining children made wards of Children's Aid Societies. The Province also reimburses a municipality to the same extent where the latter has made payments under an agreement with a Children's Aid Society for the temporary care and shelter of non-wards. Children's institutions are governed by provisions of the Charitable Institutions Act and day nurseries by the Day Nurseries Act. The Province makes per diem grants for children in charitable institutions and pays one-half of the operating and maintenance costs of municipal day nurseries. Juvenile Courts are under the Attorney General's Department while training schools for juvenile offenders are operated by the Department of Reform Institutions.

Care of the Aged.—Under the Homes for the Aged Act municipalities must provide institutional or boarding home care for the aged. The Province contributes 50 p.c. of the cost of constructing approved homes or of approved additions and extensions and 50 p.c. of their net operating and maintenance costs. It also pays 50 p.c. of the cost of maintenance in approved boarding homes up to \$30 per month. Private homes for the aged are licensed, inspected and assisted under the Charitable Institutions Act which provides for grants in aid of construction equalling \$1,000 per bed and also small per diem payments on behalf of residents. The Elderly Persons Housing Aid Act provides for grants to limited-dividend housing corporations building low-rental housing for elderly persons.

Social Assistance.—Under the Unemployment Relief Act the Province reimburses municipalities, up to a prescribed maximum, for 50 p.c. of their expenditures on relief to needy unemployables and on incapacitation allowances and rehabilitative measures for single, needy, handicapped residents. In unorganized areas the program is administered and financed by the Department. The Soldiers' Aid Commission extends emergency assistance and advice to ex-servicemen and their families. For several years Ontario provided pensions for needy disabled persons; since Jan. 1, 1955 the Province has participated in the new federal-provincial scheme for the totally and permanently disabled (see pp. 287-288).

Manitoba.—The Public Welfare Division of the Department of Health and Public Welfare is responsible generally for provincial welfare services.

Child Care and Protection.—The Director of Public Welfare administers the child welfare legislation. Included in this administration is the supervision of Children's Aid Societies and of child care institutions. The Provincial Public Welfare Division provides child welfare services directly through a decentralized program of district offices in a large area of the Province. In the remainder of the Province the Director supervises the four non-denominational Children's Aid Societies in their respective territories. Neglected children may be made wards of the Director of Public Welfare or of a Children's Aid Society. Municipalities are responsible for the maintenance of wards but the Province reimburses them for a portion of these costs from the \$500,000 annual fund distributed among the municipalities in proportion to their relief and child welfare expenditures. Under agreements between the Province and the Children's Aid Societies payment of annual provincial

grants is conditional on the provision of a basic level of service and the collection of equivalent voluntary contributions; payments are based on the number and cost of social workers per 100,000 population in a representative area.

The Division provides foster home care and supervision for mental defectives placed in the custody of the Director of Public Welfare and, with the Division of Psychiatry, operates a home for mentally defective girls. The Attorney General's Department is responsible for Juvenile Courts and operates a boys' home and a girls' home for delinquents.

Care of the Aged.—Institutions and nursing homes for the aged and infirm are supervised and licensed by the Department under public health legislation.

Social Assistance.—Municipalities are responsible for assistance to needy residents, but these expenses as well as ward maintenance costs are partly reimbursed by the Province from the \$500,000 annual social assistance fund which is allocated on a *pro rata* basis. In addition, whenever the costs of social assistance and ward maintenance to any municipality exceed in a year a sum equivalent to four mills of the equalized assessment of such municipality, the Province reimburses 60 p.c. of the excess. The Province is responsible for aid to persons without municipal residence as well as for general assistance in unorganized territory.

Saskatchewan.—Provincial welfare services are administered by the Department of Social Welfare and Rehabilitation.

Child Care and Protection.—The Department provides welfare services for children throughout the Province with the exception of Saskatoon where certain responsibilities are delegated to the Children's Aid Society. Children found to be neglected are, by court order, made wards of the Minister and are placed in foster homes, adoptive homes or institutions. A portion of the maintenance costs of wards, except of children born out of wedlock, is paid by the municipality of residence. The Branch operates two institutions for the temporary care of wards. It also operates a program of non-ward care and a program for unmarried mothers.

The Corrections Branch of the Department is responsible for both adult and juvenile correctional services, supervises probation and parole services for juvenile delinquents and administers the Saskatchewan Boys' School and the provincial gaols. The Juvenile Court is presided over by a judge who devotes his time exclusively to cases of juvenile delinquency. Juveniles are discharged from correctional institutions only by parole. A Youth Guidance Authority supervises the discharging of juveniles from probation, from institutions and from parole.

Care of the Aged.—Aged and infirm persons are cared for in four provincial nursing homes and in private homes for the aged. The latter are inspected and licensed under the Housing Act which also empowers the Province and municipalities to subscribe to the stock of limited-dividend housing companies building low-rental accommodation for older persons. Capital grants, and also maintenance grants equalling \$40 per bed per year, may be made to municipalities, church or charitable organizations sponsoring approved homes or housing projects.

Social Assistance and Special Services.—The costs of assistance to needy persons are shared equally by the municipalities and the Department but the Province pays the entire cost for transients and for persons in unorganized areas. The Rehabilitation Branch provides training and placement services for the handicapped; one-half the cost of this training is borne by the Province and one-half by the municipality of residence. It is also responsible for the rehabilitation of minority groups and operates a farm where the *métis*—persons of mixed Indian and white stock who do not qualify under the Indian Act—are instructed in modern methods of farming while being paid for their work. Three schools are conducted for *métis* children.

The Department administers the Provincial Housing Act which empowers the Province to enter into public housing projects under the National Housing Act, and to stimulate construction of low-rental housing projects by limited-dividend housing corporations.

Alberta.—The Department of Public Welfare is responsible for the administration of provincial welfare measures. It has branches at the four larger centres and inspectors are located in suitable areas throughout the Province.

Child Care and Protection.—The Provincial child welfare program is directed by a Child Welfare Commission composed of five members of whom the chairman is the Superintendent of the Child Welfare Branch. Neglected children, made wards of the Government by court order or by agreement, may be placed in foster homes, adoptive homes or institutions. The cost of maintenance of wards is paid by the Province which recovers 40 p.c. of such cost from the municipality of residence. The Home Investigating Committee is responsible for the inspection and the licensing, where required, of all homes and institutions in which children are given care. The Attorney General's Department administers legislation regarding juvenile delinquency.

Care of the Aged.—Provincial grants equalling one-third of the cost or \$500 a bed, whichever is the lesser, may be made to municipalities erecting or purchasing homes with ten or more beds for aged or infirm persons. The Province also meets up to one-half of the cost incurred by municipalities for the maintenance of aged and infirm persons in homes licensed by the municipality in accordance with specified standards.

Social Assistance.—Municipalities are responsible for assistance to indigent residents but the Province is authorized to make grants to the municipalities of up to 60 p.c. of the value of the assistance. The Province, through the Department of Municipal Affairs, pays the total cost of assistance granted to transients and to residents of unorganized districts, subject to a refund of 40 p.c. from the districts. Families may be assisted through settlement on suitable farm lands. The Single Men's Division maintains two hostels and one welfare centre to care for unemployable, single, homeless men without municipal domicile. Single ex-servicemen are cared for at Calgary and Edmonton without being placed in institutions. The Province has also established nine *métis* colonies where settlers have extensive fishing, hunting and trapping rights and are encouraged to engage in lumbering, agriculture and stock-raising. Educational services are provided and government operated stores sell goods at cost price.

Widows and Disabled Persons Pensions.—Under the Widows Pension Act, widows aged 60 to 64 years inclusive may receive pensions of up to \$40 per month. Also included in this category are wives of husbands committed to mental hospitals or deserted wives who meet the conditions of need and residence and are within the designated age group.

Since 1953 the Provincial Government has provided pensions for needy disabled persons; since Jan. 1, 1955 Alberta has participated in the new federal-provincial scheme which provides allowances for the totally and permanently disabled (see pp. 287-288).

British Columbia.—The administration of provincial welfare services by the Social Welfare Branch of the Department of Health and Welfare is decentralized through district and municipal offices in six regions covering the whole Province. Generalized field service is provided by provincial social workers. The staff of the Social Welfare Branch is also responsible for welfare services required in connection with a number of programs operated by the Health Branch.

Cities and municipalities of over 10,000 population must have their own social welfare departments to administer the social assistance program and to provide case-work services. The Province pays 50 p.c. of the salaries of municipal social workers or, where more than one is needed, matches the municipal appointees, worker for worker. Smaller municipalities may have their own or amalgamated social welfare departments or they may pay for the services of the Social Welfare Branch.

Child Care and Protection.—The Child Welfare Division administers legislation governing the protection of children, including adoptions, and provides direct services except at Vancouver and Victoria where it supervises the Children's Aid Societies. Municipalities are responsible for the costs of maintaining wards but the Province reimburses them to the extent of 80 p.c. of such expenditure and pays the entire cost for children in unorganized areas. The Province pays the total maintenance cost of wards who are children of unmarried mothers. Child care institutions, boarding homes and day nurseries are licensed and supervised. The Social Welfare Branch administers an industrial school for delinquent boys and one for delinquent girls. Family case-work and rehabilitative supervision of children released from the schools are carried on in co-operation with the Psychiatric Division and the probation service of the Juvenile Courts. These courts are under the jurisdiction of the Attorney General's Department.

Care of the Aged.—The Province operates the Provincial Home for elderly, homeless men, the Provincial Infirmary for the chronically ill and the Provincial Homes for the Aged for senile and psychotic patients. It also licenses and supervises homes for the aged, nursing homes, and boarding homes, and where necessary shares with the municipalities on an 80—20 basis the costs of maintaining needy residents. The Province meets the total cost for provincial charges. It contributes 33 p.c. of the capital costs of construction of municipal nursing homes and also makes grants in aid of construction to municipalities and organizations building homes for the aged.

Social Assistance.—The social assistance program is administered by the Director of Welfare and supervised by the Family Division. It includes allowances to indigent individuals or families, counselling services, occupational training and the maintenance costs of nursing home or boarding home care. The Province reimburses the municipalities for 80 p.c. of the cost of basic and certain supplementary social assistance payments to indigent municipal residents and assumes the total cost of assistance granted for those without municipal residence.

Subsection 3.—Workmen's Compensation

In all ten provinces, legislation is in force providing for compensation for injury to a workman by accident arising out of and in the course of employment or by a specified industrial disease. A summary of provincial workmen's compensation legislation is given in Chapter XVIII.

Subsection 4.—Charitable and Benevolent Institutions

Statistics of charitable and benevolent institutions are compiled every five years. The Census of 1951 covered the 1950 activities of 533 institutions, 490 being residential institutions and 43 being day nurseries. Summary statistics are given in the 1954 Year Book, pp. 263-264.

PART III.—NATIONAL VOLUNTARY HEALTH AND WELFARE ACTIVITIES

A number of national voluntary agencies carry on important work in the provision of health and welfare services, planning and education. These agencies, some of which are described below, supplement the services of the federal and provincial authorities in many fields and play a leading role in stimulating public awareness of health and welfare needs and in promoting action to meet them.

Canadian Welfare Council.—The Council, established in 1920, is a national association of organizations and individual citizens in partnership to secure comprehensive, well-administered social services of high quality for the Canadian people. It furnishes authoritative information, technical advice and field service in the main areas of social

welfare and provides a means of co-operative planning and action by serving as a link between the public and private agencies. Member organizations include community chests and councils, private social agencies, various federal, provincial and municipal departments and other groups and individuals active in the fields of health, welfare and education.

The policies and programs of the Council are determined by its members with the help of a nationally representative elected board of governors. Aided by professional staff the members work together through Divisions of Family and Child Welfare, Recreation, Public Welfare, Delinquency and Crime, and Community Chests and Councils. Other aspects of social welfare are dealt with by special committees and departments including the Department of French Services.

Some subjects to which the Council is giving study are: labour, desertion, institutional care of children, needs of the aged, public assistance, welfare of immigrants, rehabilitation of the disabled, health insurance and civil defence. A large number of surveys on a variety of subjects have been requested by agencies, communities and provinces. Council publications include the periodicals *Canadian Welfare* and *Bien-être social canadien*, a directory of Canadian welfare services, and division bulletins, pamphlets and reports.

Canadian Conference of National Voluntary Health and Welfare Organizations.—The Conference, set up in 1949, provides national health and welfare agencies with a clearing-house and a medium for the exchange of experience and for joint study and action with a view to increasing co-operation in matters of common concern.

Canadian National Institute for the Blind.—The Institute, founded in 1918, provides extensive rehabilitative services for blind persons and carries on an active program for the prevention of blindness. Its services include home teaching of touch reading and writing, handicrafts, occupational training and placement, welfare services and financial assistance. It operates factories to afford employment for blind men and women and controls tobacco stands, news stands and industrial cafeterias managed by the sightless. Field services are provided through over 30 district offices staffed by field workers and teachers, most of whom are blind. The Institute maintains a national library of Braille and recorded literature, operates several residences and gives financial support to recreational clubs for blind persons. In the preventive field it operates eye clinics, arranges treatments and distributes literature. The Institute is supported by government grants and voluntary subscriptions.

The Canadian Red Cross Society.—The peacetime program of the Society consists of eight major services. The operation of outpost hospitals and of a blood-transfusion service are important projects in nearly all provincial divisions. Nutrition and visiting homemaker's services, and instruction in swimming and water safety are carried on in most branch areas. In addition relief is supplied in times of national and international disaster, craft training and recreational centres are operated for hospitalized war veterans, and a national inquiry bureau traces persons for the purpose of reuniting families and friends.

The Canadian Junior Red Cross promotes health and good citizenship in schoolroom branches across Canada. As part of its program the Junior Red Cross Crippled Children's Fund is maintained to assist in providing treatment for handicapped children.

The Victorian Order of Nurses for Canada.—The Victorian Order of Nurses is a voluntary public health agency, national in scope and having as its primary object the care of the sick in their own homes. Care is given, under medical direction, by visiting nurses to medical, surgical and maternity patients, a large percentage of whom would otherwise be without skilled nursing services. Patients are expected to pay the cost of the home visits but fees are scaled according to family income and service is never refused because of inability to pay.

Part time nursing service is given in industrial plants where the number of employees does not warrant full time employment of a nurse. In smaller centres where the Order provides the only public health nurse the program is usually enlarged to include school nursing, assistance at immunization clinics and child health centres, and other public health services.

The Health League of Canada.—The Health League of Canada is a voluntary association devoted to health education. Through the media of press, radio, posters, pamphlets, motion pictures and the public platform, the League keeps the public informed concerning the health value of milk pasteurization, immunization procedures for preventable diseases, proper nutritional habits, sanitary work practices by public food-handlers and organized health programs for industrial workers. The League supplements its year-round program with the annual sponsoring of a National Health and a National Immunization Week.

The Order of St. John.—The primary purpose of the Order is to teach first aid and home nursing to citizens of Canada irrespective of age, race and creed and to provide trained and organized personnel to help in time of emergency. The Canadian branch was organized in 1895 and since that time more than 1,250,000 persons have been trained and have passed examinations in various subjects. The Order has its headquarters and national offices at Ottawa, branches in every province and local centres in hundreds of cities, towns and villages throughout Canada. There are two subsidiary branches, the St. John Ambulance Association and the St. John Ambulance Brigade, the first devoted to teaching and the second to rendering voluntary public assistance as required. The Order has been selected as the official organization to train civil defence workers in basic and advanced first aid.

The Canadian Arthritis and Rheumatism Society.—The Canadian Arthritis and Rheumatism Society was incorporated in 1948 for the purpose of reducing morbidity and mortality from arthritic and rheumatic diseases. Its objectives include the raising of funds to support research, the education of professional personnel and of the general public, and the promotion and organization of treatment facilities. A Medical Advisory Board composed of leading physicians, surgeons and scientists advises on the research program, professional education and public relations.

Divisions of the Society are organized in nearly every province. Arthritis clinics sponsored by the Society have been established in more than 30 hospital outpatient departments and in addition 65 mobile physiotherapy units provide treatment and consultations to those unable to leave home.

The Canadian Mental Health Association.—The Canadian Mental Health Association operated between the years 1918 and 1950 as the National Committee for Mental Hygiene. The Association carries on a continuous educational campaign for the general public on various aspects of mental health and in co-operation with the University of Toronto initiated a mental health liaison course for selected teachers from all provinces. Provincial branches seek to promote a better understanding of the problems of mental illness and the need for community participation in mental health services. The program of the Association also includes fact-finding surveys of current mental health services and research studies of specific aspects of mental illness and social behaviour.

Other National Health Organizations.—Additional voluntary agencies are engaged in a variety of health activities including financial support and operation of educational programs, research and training, and the provision of treatment. These activities may be directed towards the general public or towards specific categories of ill or disabled persons such as the paraplegics and patients suffering from multiple sclerosis. Some organizations such as those dealing with the blind and the deaf are interested in the welfare as well as the health problems of the groups served. Organizations of professional medical and related personnel, in particular of public health personnel, assist in the development of agencies and in guiding their activities.

PART IV.—VETERANS HEALTH AND WELFARE SERVICES*

Section 1.—The Department of Veterans Affairs

The Department of Veterans Affairs administers the legislation making up the Veterans Charter, except for the Pension Act which is the responsibility of the Canadian Pension Commission. The Department was established in 1944 and its organization and scope are reported upon in the 1946 Year Book, pp. 1052-54. Subsequent editions of the Year Book report the work of the Department each year, and the following Sections bring it up to Mar. 31, 1955.

Briefly the Department is now mainly concerned with the provision of medical treatment, the payment of allowances, land settlement, welfare work and the rehabilitation of disabled veterans. A few veterans (Korean action and disability pensioners) are receiving vocational and educational training; educational assistance is being provided for children of the war dead; some re-establishment credit has not yet been claimed; and claims and applications relating to insurance for veterans are received regularly.

The work of the Department, except as regards the Veterans' Land Act, and of the Canadian Pension Commission, is decentralized through 18 district offices and two sub-district offices in Canada, and a district office in London, England. The administration of the Veterans' Land Act is carried on through eight district offices and 34 regional offices, with travelling supervisors operating from the latter to serve the veterans settled throughout Canada.

Imperial War Graves Commission.—The Commission was incorporated by Royal Charter in 1917 and was entrusted with the marking and maintenance in perpetuity of the graves of those of the British Commonwealth Armed Forces who lost their lives between Aug. 4, 1914 and Aug. 31, 1921 and between Sept. 3, 1939 and Dec. 31, 1947. The Commission erects memorials to commemorate those who have no known grave.

The official agent in Canada of the Commission is the Minister of Veterans Affairs and the area of responsibility of the Canadian Agency is the continent of North America. Office of the Secretary-General of the Canadian Agency is in the Veterans Memorial Building, Ottawa. The Canadian Agency is responsible for about 13,000 war graves in over 2,000 cemeteries. The memories of approximately 3,400 servicemen, missing in operations while based in North America, are commemorated on the memorials which have been erected at Victoria, B.C. and at Halifax, N.S. A memorial to be erected in Ottawa will commemorate the names of an additional 850 servicemen who served with the Commonwealth air forces.

Section 2.—Medical, Dental and Prosthetic Services

Medical Services.—The Department maintains a chain of 12 active treatment hospitals from coast to coast as well as two convalescent centres and three veterans homes where domiciliary care is provided. Besides the 17 institutions owned and operated by the Department, with a total operating capacity of 9,425 beds as of Mar. 31, 1955 there are 588 beds in three veterans pavilions at Ottawa, Regina and Edmonton. These pavilions are owned by the Department but are operated by the parent hospitals and partially administered by Departmental staffs. Special centres are maintained in the active treatment hospitals for the investigation and treatment of arthritis, paraplegia, tuberculosis, mental and other conditions.

Where Departmental facilities are not available entitled veterans may be treated at Departmental expense by their own doctors, in the hospitals of their choice.

Most of the hospitals are located close to medical schools and, when they are, close co-operation is maintained between the two, with the hospitals participating in medical teaching. Eleven of the active treatment hospitals have been approved by the Royal

* Contributed by the various Branches of the Department of Veterans Affairs.

College of Physicians and Surgeons in Canada for postgraduate teaching in internal medicine and surgery, and seven have been approved for advanced postgraduate teaching in the various specialties.

The members of the professional staffs of the hospitals are employed on a part time basis by the Department and most of them also serve on the faculties of the medical schools. University presidents have continued their co-operation with the Department by permitting their deans of medicine to nominate highly qualified doctors as consultants in Departmental hospitals, and in allowing the employment of non-medical university staff members as advisers to the Department.

The Departmental Research Program, set up in 1950, has continued and enlarged. During the year ended Mar. 31, 1955 over one hundred projects were in progress. The projects deal with a variety of conditions but the majority are concerned with older veterans. The Department is in a unique position to undertake such clinical research. Among these projects may be mentioned studies on atherosclerosis, nutrition in elderly patients, hypertension, chronic respiratory disease and a program concerned with the problems of ageing. Various clinical follow-up studies are also in progress and a close liaison is maintained with other government departments undertaking research. An isotope laboratory has been established at Queen Mary Veterans' Hospital in Montreal. In five of the larger hospitals Clinical Investigation Units are in operation. These are self-contained units which provide basic facilities for clinical research and carry out detailed metabolic and other studies required both for research and treatment.

The Department provides financial assistance for postgraduate study and during the year ended Mar. 31, 1955 thirty-two persons attended courses under the Research and Medical Education Grant. Schools for the training of nursing assistants are in operation at Halifax, Montreal and Toronto and have facilities for graduating 180 nursing assistants annually. Graduates may obtain employment in Departmental hospitals.

Arrangements are in effect whereby members of the Armed Forces may be treated in Departmental hospitals at the request of the Department of National Defence; at three of the active treatment hospitals, a special Armed Forces Unit, staffed by Department of National Defence personnel, has been established within the hospital. Arrangements are also in effect for the treatment in Departmental institutions of members of the Royal Canadian Mounted Police and sick mariners.

During the year authority was obtained to amend the Veterans Treatment Regulations relating to the treatment for non-pensioned conditions of veterans with limited income and resources. Previously such veterans were subject to a means test and veterans who qualified were given treatment free of charge. Those who could not qualify under the means test were not eligible for treatment unless they could pay the full hospital costs. The amendment raised the ceiling by over 100 p.c. and a sliding scale charge for hospitalization was introduced, depending on the amount of adjusted income. Where income and resources are below certain limits hospitalization continues to be provided without cost to the veteran.

Any veteran may receive treatment in a Departmental hospital for a non-pensioned condition by guaranteeing the full cost of hospitalization. During the year ended Mar. 31, 1955 over 2,300 veterans took advantage of this privilege. The introduction of the new legislation mentioned above will result in more veterans receiving elective treatment but will reduce the number who pay full costs.

Prosthetic Services.—Orthopaedic and surgical appliances, prescribed by Treatment Services under the Veterans Treatment Regulations, are supplied by the Prosthetic Services Branch of the Department of Veterans Affairs. This organization, with a staff complement of 235, comprises a central manufacturing and fitting establishment at Sunnybrook Hospital, Toronto, with other such centres in eleven of the larger Canadian cities, serving to extend manufacturing, repair and fitting facilities to all parts of Canada. Types of appliances manufactured are those of individual specifications such as artificial

legs, arms, eyes, facial restoration prostheses, braces, belts, orthopædic boots, etc.; others such as hearing aids, spectacles, trusses, surgical hosiery, etc., are purchased from manufacturers under contract.

The Branch also extends training in prosthetic manufacture to about five or six persons each year at the request of provincial or foreign government authorities.

During the fiscal year ended Mar. 31, 1955 about 65,000 persons were supplied with appliances, accessories, or maintenance service. Total issues numbered 124,408.

A Research and Development Section operates to apply scientific knowledge toward development of new designs, materials, methods, to the solution of special prosthetic problems, and to general improvement and development in the prosthetic field. Liaison is maintained with the National Research Council, Ottawa and with research committees in the United Kingdom and the United States. Staff training classes are arranged to instruct senior personnel with respect to newly developed appliances and processing techniques.

Dental Services.—As with any other form of treatment, dental treatment is provided by the Department to those veterans and other persons who are eligible under the various classes of the Veterans Treatment Regulations. This includes treatment provided at the request and expense of other Government Departments such as the Department of National Defence—for the Armed Services—and the Department of Justice—for the RCMP—and of other governments, such as those of the United Kingdom and the United States.

The Department maintains 18 full time and eight part time dental clinics in the various DVA hospitals and other institutions across Canada. There are 37 full time dental surgeons employed in these clinics. In localities where Departmental facilities are not available, treatment is supplied through the dentist-of-choice plan by civilian practitioners.

Dental treatments provided by the Department reached a peak in 1947-48 and since then have declined to approximately 19,000 cases per year involving about 125,000 operations.

Vetcraft Shops.—Vetcraft Shops are operated at Toronto and Montreal and small assembly is done in Winnipeg, Calgary and Regina, to provide sheltered employment for a number of disabled veterans. These shops produce poppies, emblems and wreaths which are sold by the Canadian Legion on Remembrance Day to obtain funds for general welfare work. Fifty-four veterans are employed regularly while homework assembly is distributed to about 50 other persons. Value of production for the 1954 campaign exceeded \$250,000.

Section 3.—Pensions and Allowances

The Canadian Pension Commission.—The Commission is a statutory body, the members of which are appointed by the Governor in Council. It is charged with the administration of the Pension Act and the Civilian War Pensions and Allowances Act and reports to Parliament through the Minister of Veterans Affairs. The Governor in Council may impose upon the Commission like duties in respect of any grants in the nature of pensions, etc. made under any statute other than the Pension Act.

The Head Office of the Commission is in the new Veterans Memorial Building in Ottawa and in each District Office of the Department the Commission is represented by Pension Medical Examiners and staff.

It is the responsibility of the Commission to adjudicate upon claims for injury or disease resulting in disability or death during service with the Navy, Army or Air Force of Canada during war or peacetime. Provision is also made whereby the Commission may supplement certain awards made by the British or Allied Governments, as set out herein, up to the amount of Canadian rates, during the recipients' residence in Canada.

The Pension Act.—Under the Pension Act (R.S.C. 1952, c. 207 and amendments):—

- (1) Pensions payable to veterans of the Fenian Raid and Northwest Rebellion under authority of Orders in Council are supplemented to the Canadian scale.
- (2) Pensions payable by Great Britain on account of Canadians who served in the South African War are supplemented to the Canadian scale.
- (3) Pensions for peacetime service prior to World War I payable under Orders in Council are supplemented to the Canadian scale.
- (4) Pensions are paid in respect of service in World Wars I and II for injury or disease or the aggravation thereof resulting in disability or death attributable to or incurred during service.
- (5) Supplementation to Canadian rates may be made during residence in Canada for (a) men who were domiciled in Canada at the outbreak of World War I, or were resident in Canada at the date of commencement of World War I but were unable to secure a Canadian domicile by reason of the fact that they had not attained their majority at the time they left Canada for service, and who were pensioned for disabilities attributable to service in the Imperial Forces during that war; (b) men who were domiciled in Canada at any time during the four years preceding the outbreak of World War II and who left Canada and enlisted with the forces of the United Kingdom, and were awarded a disability pension by the Government of that country; (c) men who were domiciled in Canada at the outbreak of World War I or II, or resident in Canada at the date of commencement of World War I or World War II but were unable to secure a Canadian domicile by reason of the fact that they had not attained their majority at the time they left Canada for service in the forces of countries allied with the United Kingdom, and were awarded a pension by the Governments of such countries.
- (6) Pensions for peacetime service between World Wars I and II and subsequent thereto are paid when the injury or disease or aggravation thereof resulting in disability or death arose out of or was directly connected with service.

Under special legislation provision was made to extend the benefits of the Pension Act to those who had enlisted in the Canadian Army Special Force and for those who had served in a theatre of operations prior to Nov. 1, 1953. Also, the Civilian War Pensions and Allowances Act provides pension legislation for a number of civilian groups whose work was closely associated with the World War II war effort (*see* p. 305).

Schedule A of the Pension Act sets out the rates at which disability pension can be paid. These rates are determined on a percentage basis in accordance with the degree of disability found to exist on medical examination from time to time. There are twenty classes covering disabilities from 5 p.c. to 100 p.c., and a twenty-first class which provides for a final payment for those whose disability is assessed at less than 5 p.c. The pension for a total disability, for the rank of Major and below, is \$125 per month. If the pensioner is married and resides with or materially supports a wife and children he is entitled to \$45 a month additional pension for his wife, \$20 a month for his first child, \$15 a month for his second child and \$12 a month for the third and any subsequent children. Slightly higher rates of personal pension are provided for those whose rank was higher than that of Major but the additional pension for such ranks is the same. If a pensioner is helpless and in need of attendance he may be granted a helplessness allowance which might vary from a minimum of \$480 to a maximum of \$1,400 per annum, depending on the amount of attendance required. For blind persons, where constant attendance is not required, the helplessness award is \$960 per annum.

Schedule B of the Act sets out the rate at which pension may be paid for deaths incurred on or attributable to service. The widow of a deceased member of the Forces, whose rank was Major or below, is entitled to \$100 a month for herself and monthly payments of \$40 for the first child, \$30 for the second and \$24 for each additional child. A child's pension expires when a boy reaches the age of 16 and a girl reaches the age of 17. However such pension may be continued to the age of 21 if the child is making satisfactory progress in a course of education approved by the Commission.

If a pensioned widow remarries, her pension ceases but she is entitled to be paid one year's pension as a final payment. If her second husband dies within five years of the date of her marriage, leaving her in a dependent condition, she may make application to have the pension restored to her.

The Civilian War Pensions and Allowance Act.—This Act provides pension legislation for a number of civilian groups whose work was closely associated with the World War II war effort, including merchant seamen, auxiliary services personnel, fire-fighters who served in the United Kingdom, special constables with the Royal Canadian Mounted Police, overseas welfare workers, etc.

Pensions in Force.—In previous issues of the Year Book information is given regarding the development of Canadian pension legislation as well as yearly statistics of numbers and liability. As at Mar. 31, 1955 pensions in force were as follows (excluding ex-members of the women's forces and miscellaneous pensions):—

Service	Disability		Dependent		Totals, Disability and Dependent	
	Pensions in Force	Liability	Pensions in Force	Liability	Pensions in Force	Liability
	No.	\$	No.	\$	No.	\$
World War I.....	58,548	37,953,876	15,323	16,950,633	73,871	54,904,509
World War II.....	100,256	54,341,994	18,250	16,860,819	118,506	71,202,813
Peacetime.....	504	254,974	294	452,231	798	707,205
Special Force.....	1,128	493,970	145	177,600	1,273	671,570
TOTALS.....	160,436	93,044,814	34,012	34,441,283	194,448	127,486,097

Veterans' Bureau.—An amendment to the Pension Act in 1930 established the branch of the Department known as the "Veterans' Bureau", and provided for the appointment of pensions advocates to assist, free of charge, veterans seeking to establish entitlement under the Pension Act. The office of the Chief Pensions Advocate is in Ottawa and there are pensions advocates at Ottawa and in each of the 18 district offices of the Department. Most of the advocates are lawyers.

In carrying out their duties the pensions advocates participate in the preparation of claims made by former members of the Forces and their dependants, which are to be submitted to the Canadian Pension Commission. They also appear as counsel for applicants before the Appeal Boards of the Commission and sometimes before the Commission itself in earlier hearings of the claims.

The service is available to all former members of the Armed Forces and to former members of the various auxiliary organizations such as merchant seamen, fire fighters and others. Applicants for pension have the right to employ a private solicitor, a veterans' organization or other representative of their choice, but most applications under the Pension Act are prepared by pensions advocates on strength of the Veterans' Bureau. As at Mar. 31, 1955 the Bureau had 7,793 active claims in hand.

Section 4.—Rehabilitation of Veterans

The Welfare Services Branch of the Department of Veterans Affairs administers the rehabilitation benefits still available to veterans, including assistance by way of advice and guidance on a wide variety of personal, frequently intangible problems which from time to time confront the veteran, and the solutions to which often, directly or indirectly, play a large part in successful rehabilitation.

This aspect of the work involves among other things the closest collaboration with other government departments at all three levels, federal, provincial and municipal. National and local welfare organizations also play their part. It involves very close

liaison work with the District Offices of the Department as well as with local Unemployment Insurance Commission offices across Canada where actual contact with the veteran and his family is generally made.

A review of the work of the various Sections of the Branch is given in the following paragraphs.

War Service Gratuity.—The payment of War Service Gratuity was discontinued after Dec. 31, 1954 except in a few cases where the applicant had overseas service and where the Minister was satisfied of the existence of circumstances justifying the delay in making application. Table 1 shows amounts expended up to Mar. 31, 1955.

1.—Gratuity Payments under the War Service Grants Act, Years Ended Mar. 31, 1945-55

Total.....	476,636,578

Re-establishment Credit.—On Mar. 31, 1955 the amount of \$25,842,664 Re-establishment Credit for World War II service remained unexpended, and the amount of \$1,741,203 for Special Force service. Of these unexpended amounts approximately \$12,000,000 belongs to veterans residing outside of Canada and is available only for the purchase of Veterans Insurance.

2.—Re-establishment Credits Paid by Required Purpose, Years Ended Mar. 31, 1954 and 1955 with Cumulative Totals to Mar. 31, 1955

Purpose	1954	1955	Cumulative Total to Mar. 31, 1955

Casualty Rehabilitation.—The casualty rehabilitation program of the Department of Veterans Affairs was inaugurated for the purpose of successfully re-establishing disabled veterans in civil life. To carry out this program each disabled veteran must be placed in a job which his remaining abilities enable him to perform, at least as efficiently as the same duties would be performed by a non-disabled employee.

To carry out its function the Casualty Welfare Division places particular emphasis on vocational guidance and training, job selection (matching worker abilities to job requirements) and vocational follow-up. Specially trained casualty welfare officers are employed in Departmental hospitals and in the District Offices to counsel disabled veterans, to assist and direct their placement in gainful employment and to provide welfare aftercare service when required.

The most important fact in the satisfactory placement of a disabled person is the person himself. Most of the veterans who have been assisted in obtaining employment by the Division have proven to be competent, efficient employees and have justified the confidence placed in them by their employers. The work of the Division is greatly facilitated by the cordial co-operation it receives from business and industry, all levels of government, community agencies, veterans associations, organizations of disabled persons and others.

Up to Mar. 31, 1955 there were 40,669 registrations with this Division, of which 5,675 were still active cases. These registrations, according to type of disability, are shown in the following statement:—

Type of Disability	Active Cases	Closed Cases
	No.	No.
Amputation.....	218	2,138
Neuro-muscular and skeletal system disabilities.....	1,334	11,256
Total and partial loss of hearing or sight.....	300	2,700
Neurological cases.....	291	1,289
Head and vascular system.....	312	3,446
Respiratory disabilities.....	2,333	8,799
Mental and emotional disabilities.....	266	827
Unclassified.....	621	4,539
TOTALS	5,675	34,994

During the year the number of registrants increased by 1,082 but, through the efforts of the casualty welfare officers, a larger number of cases were closed so that, on balance, the fiscal year ended with a smaller number of active cases, namely 5,675 against 6,100 as of Apr. 1, 1954. Progress in the rehabilitation of the cases between Mar. 31, 1954 and Mar. 31, 1955 was as follows:—

<i>Status</i>	<i>Mar. 31, 1954</i>	<i>Mar. 31, 1955</i>
	No.	No.
Employed.....	31,607	32,461
Unemployed.....	912	1,079
Receiving treatment, training or other services.....	2,716	2,470
Rehabilitation not feasible.....	2,319	2,608
Closed on WVA.....	1,228	1,132
Left Canada.....	805	910
TOTALS.....	39,587	40,669

Social Service.—Within broad policy limits social workers have considerable freedom in applying their professional knowledge and skills to the work of the Welfare Services Branch. They give direct service in certain types of cases, act as consultants within their areas of competence to other staff dealing with welfare problems and assist in staff development programs concerned with welfare principles and methods.

In three districts where postgraduate schools of social work are located, Branch social workers participate in field work training of students. They maintain liaison with social agencies and welfare departments at different levels of government in the interests of veterans and their dependants. They are active in local welfare councils and similar organizations designed to co-ordinate and improve community welfare services. They also have special responsibilities in the operation of the War Veterans Allowances Assistance Fund and DVA services to the Department of National Defence.

Shortly after the outbreak of hostilities in Korea, DVA, at the request of National Defence, undertook to provide reports on home circumstances of serving personnel who request compassionate leave, posting or discharge. This involves interviewing wives, parents, etc., and frequently contact with doctors and others. Wherever possible dependants are counselled regarding available sources of help in the community and how to use such sources. During the year ended Mar. 31, 1955, 3,032 such requests were received, 529 fewer than during the previous fiscal year. This decrease is related to the withdrawal of Canadian Forces from Korea.

Rehabilitation of Older Veterans.—General welfare needs of older veterans are increasing in importance and volume, and sustained effort is required in helping them with their problems. Increasing numbers of World War I veterans are becoming wholly retired or in the "light employment only" class, entailing increasing calls on the Department's statutory provisions for assisted maintenance and co-ordinated search for suitable work. Their ranks are being swelled annually as World War II veterans pass middle age.

At Head Office and at each District Office specified welfare officers give particular attention to the older group and enlist the interest and co-operation of all available agencies. Disability pensioners, recipients of War Veterans Allowance and particularly those veterans who do not yet qualify for the Allowance, superannuated, retired, or partially retired veterans, all invariably require and receive welfare services as a general aid to their economic requirements or problems. Suitable employment within their capacity is paramount and that there has been no lessening of need in this field is borne out by Unemployment Insurance Commission reports of World War I and dual-service veterans registered for employment, viz., at Mar. 31, 1953, 10,744; at Mar. 31, 1954, 12,977; and at Mar. 31, 1955, 13,570.

To meet this need active participation is maintained with the Older Workers Committee of the Department of Labour, the Canadian Welfare Council Committee on the Aged, and the Unemployment Insurance Commission. Leadership is given in the holding of local boards to review the cases of registrants not gaining employment in a reasonable

time through veterans' organizations and to study and resolve the individual veteran's employment and general welfare. Activities continue with all associated bodies in the field of housing and recreation, co-ordinated with medical and professional services with respect to domiciliary care and rehabilitation. Counselling is given older veterans to "plan their retirement in advance", arrange their housing, insurance, etc., in relation to expected reduced incomes upon cessation of regular employment.

Close co-operation is maintained with the Corps of Commissionaires, an efficient, privately controlled older veterans' employment agency. Government departments utilize about half of the nearly 6,000 employed Commissionaires but private employers are increasingly recognizing their worth and lately a number of municipalities have entered into contracts with the Corps to use Commissionaires as auxiliaries to police in controlling traffic, parking, etc.

Assistance Fund.—In 1955 revision of the War Veterans Allowance Act was followed by changes in the Assistance Fund. The main effect of new regulations (Order In Council dated Apr. 4, 1955) was to enlarge the formula used in determining need for a continuing monthly grant. Clothing and personal allowances were added to those for rent, fuel, food and health needs. As before, single grants may be given to cover emergency needs not included in the monthly formula. Maximum assistance from the Fund is \$120 to \$144 per annum respectively to single and married recipients of War Veterans Allowances.

Field work for the Fund is done almost entirely by the Welfare Services Branch which, through counselling and referral, also assists applicants in other ways. Since a monthly grant can continue as long as the original need is unchanged the number of people assisted in any year is greater than the number applying during that period. Some statistical comparisons of Fund activity during the years ended Mar. 31, 1954 and Mar. 31, 1955 are as follows:—

<i>Item</i>		<i>Mar. 31, 1954</i>	<i>Mar. 31, 1955</i>
Persons assisted.....	No.	4,440	5,681
Persons applying during year.....	No.	3,526	3,618
Applicants assisted.....	No.	3,189	3,294
Proportion of applicants assisted.....	p.c.	90	91
Fund expenditures during year.....	\$	347,461	478,015
Monthly grants given.....	\$	192,127	303,628
Proportion of expenditure given in monthly grants.....	p.c.	55.3	63.5
Average expenditure per person assisted.....	\$	78.26	84.14

Education and Training.—The university training program for veterans authorized by the Veterans Rehabilitation Act is drawing to a close. Most of those now receiving assistance are Korean veterans and disability pensioners. At the end of the 1954-55 academic year, of the 377 being assisted 71 were veterans of the Korean Force; of the 346 taking vocational training, 159 were veterans of the Korean Force.

The Pensioners Training Regulations, established in 1954 by Order in Council, provide training under the terms of the Veterans Rehabilitation Act for members of the Regular Forces who are discharged with entitlement to disability pensions. During the 1954-55 fiscal year two veterans were approved for university training and two for vocational training.

The Children of War Dead (Education Assistance) Act provides assistance for the higher education of children of deceased members of the Armed Forces and of other persons whose deaths have been attributed to war service by the Canadian Pension Commission. This assistance is available to eligible children who are undertaking courses of education for which graduation from a secondary school or its equivalent is a requirement of admission.

The Assistance is in the form of a monthly living allowance of \$25 to each student during the academic year and the payment of tuition and other admissible fees not exceeding \$500 in any academic year. The assistance may not be continued beyond four academic years or 36 months, whichever is the lesser. The benefits of this Act are available in Canada only and may not be paid beyond the academic year in which the student achieves his or her 25th birthday.

From the inception of this Act July 1, 1953 to Mar. 31, 1955 applications were approved for 493 children (male 263 and female 230); \$137,963 was paid for fees and an additional \$123,674 for monthly allowances, a total of \$261,637. During the fiscal year 1954-55 applications were approved for 187 children, requiring an expenditure of \$154,855 (fees \$78,360 and allowances \$76,495).

The training provided under this Act is distributed under 46 headings. Nursing, teaching and engineering accounted for 55.15 p.c. of the total in 1954-55; law, medicine, biology, theology, geology and accountancy accounted for 21.13 p.c.; and social work, journalism, laboratory technicians, secretarial, pharmacy and other occupations accounted for 23.72 p.c.

The Veterans' Land Act.—Throughout Canada the Veterans' Land Act Administration has 257 resident Field Supervisors whose responsibility it is to appraise land being considered for settlement and to assist and advise veteran settlers in agricultural matters in a manner that will lead to sound and permanent settlement. There are also 93 Construction Supervisors working in the field giving close supervision and practical advice to veterans on matters relating to home building. In order to ensure that supervisory officials keep abreast of the latest developments and newest techniques in agricultural production and construction methods, staff training conferences are held throughout Canada each year. Also the importance of sound appraisals is stressed and field supervisors are given every encouragement to qualify as Accredited Rural Appraisers.

During the fiscal year 1954-55 net approvals for assistance in land settlement were made on behalf of 3,620 veterans of World War II and the Special Force and, of these, 2,727 were part time farmers (smallholders), 846 full time farmers and 47 were commercial fishermen. At the end of March 1955 a total of \$345,270,219 of public funds had been committed on behalf of 68,810 veterans. At the end of the year 60,708 accounts were active, including those of 1,456 Indian veterans on Indian reserve lands administered by the Department of Citizenship and Immigration.

By Mar. 31, 1955, of all veterans settled during the previous twelve years, 87 p.c. still had subsisting contracts with the Director and 6 p.c. had acquired title to properties. Only 7 p.c. had relinquished their contracts, most of them voluntarily; in only 126 cases or less than 0.2 p.c. of the total was it necessary to rescind contracts and repossess property. Contract terms had been fulfilled by 103 veterans who thereby earned their Conditional Grants, and in 42 of these cases the contract debt to the Director was paid off and title to both real estate and chattels turned over to the veterans. In addition titles to livestock and farm equipment had been released to 7,843 veterans who became firmly established and acquired substantial financial equities in their properties.

The repayment terms for farmers and most of the fishermen call for annual or semi-annual instalments, while part time farmers make payments on a monthly basis. As of Mar. 31, 1955 only 1.5 p.c. of the veterans were in arrears of \$200 or more in the case of farmers and fishermen or \$100 or more in the case of part time farmers. Prearranged systems of making payments are used by nearly 19,000 veterans and an additional 2,553 have completely prepaid their contract debts. Postdated cheques are used by 11,923 veterans, 5,829 have given orders on pensions or salary assignments and 1,222 share-of-crop agreements are in effect in the spring wheat areas of the Prairie Provinces.

Under the current provisions of the Act there are various alternatives available to veterans who wish to become established. Farmers already settled who now wish to increase the productivity of their farms or promote soil conservation may do so at a cost of up to \$4,500 beyond the original investment by paying one-third of the additional cost. The Director will advance the remaining two-thirds up to a maximum of \$3,000 at 5 p.c. interest. This additional aid places them on equal terms with farmers now being settled who can have up to \$10,500 expended on their behalf by investing \$1,980 of their own funds.

No additional assistance has been made available to established part time farmers and commercial fishermen because Part IV of the National Housing Act makes funds available to them for the purpose of adding to or improving their homes. However both

part time farmers and commercial fishermen now being settled are eligible under Part III of the Act (see 1955 Year Book, p. 291) for loans of up to \$1,400 (additional to their loans under Part I) by contributing an amount equal to one-half of the amount loaned. This means that the down payment required of the fisherman may be as low as \$1,180, or \$1,240 in the case of the part time farmer, for maximum assistance of \$8,100.

With an investment of \$800, which may be in cash or the title to a suitable lot, veterans may obtain assistance, up to a maximum of \$8,000, for the purpose of building homes on city-size lots.

One out of every thirteen agricultural units in Canada with a gross income of \$1,200 or more is occupied by a veteran settled under the provisions of the Veterans' Land Act. Most of these properties, which are the security for the public investment in this real estate, have increased substantially in value since the Director obtained title. Part of this increase is of course a result of the upward trend of land values during the past decade but a large part of it is attributable to the improvements to the land and buildings effected by the veterans. Inventories of stock and equipment have also been increased considerably both in quantity and in quality and the financial stability of the veterans greatly improved.

A study of over 8,900 consecutive reports indicated that 80 p.c. of 29,402 active smallholders had vegetable gardens which, it is estimated, saved each smallholder an average of \$135. About 26 p.c. used the land to raise farm produce which brought in cash returns amounting to nearly \$800 each on the larger holdings of two or more acres. Over 70 p.c. had substantially increased the value of their properties by completing part of a long term program covering such essential items as grading and lawn, tree and shrub planting. The value of produce raised for home use or for sale was estimated to be about \$7,000,000 in 1954-55.

There were 1,665 new homes completed during the year, this being a slight increase over the number built during the previous twelve months, making a total of 18,285. The veterans themselves play a large part in constructing or improving their homes and farm buildings. During the year nearly 88 p.c. of the new homes started and practically all of the improvements made were on the basis of veterans acting as their own contractors.

In addition 27 veterans commenced construction of their own homes on city-size lots under the provisions of Part II of the Act.

3.—Settlement Status, Loans and Grants under the Veterans' Land Act as at Mar. 31, 1955

Returned Soldiers' Insurance.—Under the Returned Soldiers' Insurance Act of 1920 veterans and widows of veterans of World War I became eligible, on favourable terms, to contract with the Government for a maximum of \$5,000 life insurance. A low medical standard enabled many veterans who were unable to meet the health requirements of commercial insurance thus to secure protection for their dependants. The insurance offered was on life plans with no provision for endowments or term insurance. Beneficiaries were restricted to wives and husbands or children, if living, otherwise certain other relatives could receive the proceeds as alternative beneficiaries.

As the insurance was devised primarily to provide a measure of security the legislation authorized a limited payment only, if death occurred in the comparatively early years, in the event of an award to the insured's dependants under the Pension Act. The amount of the reduction thus effected continued to decrease the longer the policy remained in force and in recent years has had little effect on most claims.

A disability benefit included in each contract provided, without extra premium charge, that premiums would be waived and the sum insured optionally payable to the policyholder if he were to become totally and presumably permanently disabled from a non-pensionable disability.

Policies were issued from July 1920 to September 1923 and from July 1928 to August 1933. A total of 48,319 policies were issued for a face amount of \$109,299,500 insurance. On Mar. 31, 1955 there were 12,467 policies in force for a face amount of \$26,246,302; of these, 3,853 policies were premium-paying, 7,626 were paid-up, 207 had been converted to the Extended Term Insurance basis, and 781 were being carried under the disability provision.

Veterans Insurance.—In 1945 the Veterans Insurance Act, based on the same principles as the Returned Soldiers' Insurance Act, enabled veterans and widows of veterans of World War II and, later, of the Korean action, to contract with the Government for a maximum of \$10,000 insurance. This Act included a provision that the proceeds will generally be reduced if a pension under the Pension Act is awarded on the insured's death occurring during the premium paying term under the policy.

The original period of eligibility for World War II service expired on Feb. 20, 1948 or three years after discharge. It was extended in 1948 by three years and in 1951 by four years so that World War II veterans have until 10 years after discharge to contract for this insurance. Those qualified by active Korean service are eligible until Oct. 31, 1958. However veterans who have unused Re-establishment Credit may apply for Veterans Insurance until Jan. 1, 1960, or at any time within 15 years after discharge, whichever is later.

The amount of insurance applied for may be in multiples of \$500 up to the maximum of \$10,000. The insurance, which is non-participating, may be on the 10, 15 or 20 payment life plan, or provide for premiums payable until the policy anniversary nearest the insured's age 65 to 85. Premiums may be paid in cash, from a pension under the Pension Act or from Re-establishment Credit. A disability benefit provides for the waiver of premiums

in the event of total and presumably permanent non-pensionable disability. Cash surrender values and alternative reduced paid-up and extended term insurance provisions are included in each contract. Loans are not available. The proceeds may be paid to the beneficiary in a lump sum up to a maximum of \$2,000; amounts in excess of this will be paid in the form of an annuity.

5.—Statistics of Veterans Insurance, Years Ended Mar. 31, 1949-55

Year Ended Mar. 31—	Insurance Issued During Year		Insurance in Force at End of Year		Death Claims Approved During Year	
	No.	\$	No.	\$	No.	\$
1949.....	4,615	14,074,500	22,293	63,836,743	91	245,500
1950.....	2,316	7,448,500	23,722	68,016,514	111	340,080
1951.....	3,247	10,718,000	25,917	75,020,885	130	400,500
1952.....	2,302	8,322,500	26,985	79,115,734	158	346,500

War Veterans Allowance Act.—War veterans allowances were first introduced in 1930 for those veterans who, owing to their front-line service, were considered to have been pre-aged and therefore were at a disadvantage in the labour market before their time.

Since then the War Veterans Allowance Act has been revised and amended on numerous occasions, each time its scope being extended or its provisions being made more generous. The Act was last revised in 1952 and details of that complete revision are to be found in the 1954 Year Book, pp. 275-276. The 1952 Act was amended as of Mar. 31, 1955, the major change being a new schedule of rates and ceilings. These are as follows:—

Recipient	Monthly Maximum Rate	Annual Income Ceiling
	\$	\$
Veterans and widow(er)s, single status.....	60	840
Veterans and widow(er)s, married status.....	108	1,440
One orphan.....	40	720
Two orphans of one veteran.....	70	1,200
Three or more orphans of one veteran.....	85	1,440

The allowances are awarded to eligible male veterans at the age of 60, or earlier if their physical or mental condition prevents them from maintaining themselves. For female veterans and widows the age is 55. Allowances may be paid to orphans of eligible veterans who have been bereft by death of both parents or abandoned by a surviving parent.

The allowances are paid subject to certain financial limitations, that is, the combination of other income and an allowance may not exceed the appropriate annual income ceiling. "Other income" does not include casual earnings from odd jobs, part time employment to \$50 per month or temporary employment up to 12 weeks per year.

The War Veterans Allowance Act is administered by the War Veterans Allowance Board at Ottawa and 19 District Authorities located in the district offices of the Department. The district authorities adjudicate upon applications for allowances and deal with matters relating to the awards. In addition to defining policy the Board deals with appeals from the decisions of the district authorities.

The number of veterans and others who were in receipt of allowances at the close of each of the fiscal years ended Mar. 31, 1950-55, together with the annual liability, was as follows:—

<i>As at Mar. 31—</i>	<i>Veterans in Receipt of Allowance</i>	<i>Others in Receipt of Allowance</i>	<i>Liability</i>
	No.	No.	\$
1950.....	26,643	7,279	20,398,723
1951.....	30,608	8,733	23,448,295
1952.....	29,137	9,602	21,498,769
1953.....	30,005	10,607	26,332,903
1954.....	30,650	11,737	26,920,255
1955.....	32,471	12,883	28,578,001

Section 1.—Canadian Criminal Law and Procedure†

The system under which justice is administered in a State is never rigid. To have it so would be neither expedient nor indeed possible. A judicial system has to grow and adapt itself to the requirements of the people and the exact limits of the powers of different legislative bodies require continued definition.

The criminal law of Canada has as its foundation the criminal common law of England built up through the ages and consisting first of customs and usages, and later expanded by principles enunciated by generations of judges. There is no statutory declaration of the introduction of English criminal law into those parts of Canada that are now the Provinces of New Brunswick, Nova Scotia and Prince Edward Island. Its introduction there depends upon a principle of the common law itself by which English law was declared to be in force in uninhabited territory discovered and planted by British subjects, except in so far as local conditions made it inapplicable. The same may be said of Newfoundland although the colony dealt with the subject in a statute of 1837. In Quebec its reception depends upon a Royal Proclamation of 1763 and the Quebec Act of 1774. In each of the other provinces and in the Yukon and Northwest Territories the matter has been dealt with by statute.

The judicial systems of the provinces as they exist today are based upon the British North America Act of 1867. Sect. 91 of that Act provides that "The exclusive legislative authority of the Parliament of Canada extends to . . . the criminal law, except the constitution of courts of criminal jurisdiction but including the procedure in criminal matters". By Sect. 92 (14), the legislature of the province exclusively may make laws in relation to "the administration of justice in the province, including the constitution, maintenance and organization of provincial courts, both of civil and criminal jurisdiction and including procedure in civil matters in its courts". The Parliament of Canada may however (Sect. 101) establish any additional courts for the better administration of the laws of Canada. It should be noted that the Statute of Westminster, 1931 effected important

* Except as otherwise credited, this Chapter has been revised in the Judicial Section, Health and Welfare Division, Dominion Bureau of Statistics.

† Prepared by the Criminal Law Section, Department of Justice, Ottawa.

changes particularly by abrogating the Colonial Laws Validity Act, 1865 (U.K.) and confirming the right of a dominion to make laws having extraterritorial operation. Particulars of the federal judiciaries are given in Chapter II, pp. 82-83 and provincial judiciaries are dealt with briefly at pp. 83-84; more detailed information on provincial judiciaries is given in the 1954 Year Book, pp. 48-55.

At the time of Confederation each of the colonies affected had its own body of statutes relating to the criminal law. In 1869 in an endeavour to assimilate them into a uniform system applicable throughout Canada, Parliament passed a series of Acts some of which dealt with offences of special kinds and others with procedure. Most notable of the latter was the Criminal Procedure Act, but other Acts provided for the speedy trial or summary trial of indictable offences, the powers and jurisdiction of justices of the peace in summary conviction matters and otherwise, and the procedure in respect of juvenile offenders.

Codification of the criminal law through a Criminal Code Bill founded on the English draft code of 1878, Stephen's *Digest of Criminal Law*, Burbridge's *Digest of the Canadian Criminal Law*, and the relevant Canadian statutes was brought about by the Minister of Justice, Sir John Thompson, in 1892. This Bill became the Criminal Code of Canada and came into force on July 1, 1893. It must be remembered however that the Criminal Code was not exhaustive of the criminal law. It was still necessary to refer to English law in certain matters of procedure and it was still possible to prosecute for offences at common law. Moreover Parliament has declared offences against certain other Acts, e.g., the Opium and Narcotic Drug Act, to be criminal offences and the same was done in the Defence of Canada Regulations and the Wartime Prices and Trade Board Regulations (neither now in force) promulgated under the authority of the War Measures Act.

It is often difficult to distinguish between "law" and "procedure". Procedure may be interpreted to relate simply to the organic working of the courts but, in a wider sense, it may also affect the rights or alter the legal relations arising out of any given state of facts. For present purposes it will be useful to note that writers on jurisprudence describe law as being substantive or adjective. "Substantive law is concerned with the ends which the administration of justice seeks; procedural (adjective) law deals with the means and instruments by which these ends are to be obtained."* With reference to the criminal law the former may be taken to include the provisions concerning criminal responsibility, the definition of 'offences' and the punishment for those offences, and the latter to include provisions for enforcement, e.g., powers to search and to arrest, for the modes of trial and for the proof of facts. Broadly speaking, the Criminal Code observes the distinction although it might appear that the provisions for preventive detention of habitual criminals and criminal sexual psychopaths partake of the nature of both classes.

An examination and study of the Criminal Code was authorized by Order in Council dated Feb. 3, 1949 and the Commission which was assigned the task of revising the Code presented its report with a draft Bill in February 1952. After coming before successive sessions of Parliament it was finally passed on June 15, 1954 and the new Criminal Code (2-3 Elizabeth II, c. 51) came into effect on Apr. 1, 1955.

The new Code effects changes in detail but continues the general features of the former system. A short outline of the system that existed under the repealed Code together with the major revisions effected by the new Code is given in the 1955 Year Book, pp. 295-298.

Section 2.—Adult Offenders and Convictions

The main interest in criminal statistics is concerned with those persons guilty of the more serious crimes. Such offenders are fewer than those who commit non-indictable offences but, from the standpoint of the protection of society, they are more important.

In 1949 the basis of the statistics of indictable crimes was changed from *convictions* to *persons* so that the figures for 1949 and subsequent years are not comparable with those for previous years. Where any person is prosecuted at the same hearing for several

* Salmond on *Jurisprudence*, 7th Edition, p. 496.

offences, one offence has to be selected for tabulation. The rule followed is to select that for which the proceedings were carried to the furthest stage—to conviction and sentence if the prisoner was tried on several charges; if there were several convictions, the offence selected is that for which the heaviest punishment was awarded; if the final result of proceedings on two or more charges were the same, the most serious offence (as measured by the maximum penalty allowed by the law) appears in the tables. Where a person was prosecuted for one offence and convicted of another (e.g., charged with murder and convicted of manslaughter), the case appears only under the offence for which he was convicted.

In the case of non-indictable offences the figures continue to be based on convictions and are thus comparable with those for earlier years.

Statistics include only cases finally determined within the year. Cases not entirely disposed of within the year (e.g., tried but sentence postponed) are held over for the next year's report.

In 1950 the reporting year for criminal statistics was changed from the 12 months ended Sept. 30 to the calendar year. Also figures for Newfoundland were included for the first time in 1951.

Subsection 1.—Adults Convicted of Indictable Offences

During the year 1953 the courts of Canada dealt with 34,027 adults charged with 53,946 indictable crimes, of whom 29,567 were found guilty of 45,071 offences. These figures show little change from those for 1952 when 35,086 adults were charged with 51,125 indictable crimes and 29,761 were found guilty of 41,591 offences.

1.—Adults Convicted of Indictable Offences and Ratio per 10,000 Population 16 Years of Age or Over by Province 1952 and 1953

Province or Territory	1952		1953

Canada.....	29,761	30	29,567	30

Indictable offences are grouped into six classes as shown in Table 2. In 1953 persons convicted of assaults of various kinds and obstructing police represented 79.7 p.c. of Class I, which covers crimes against the person. In that year 10 persons were convicted of murder, 3 of attempted murder and 79 of manslaughter as compared with 18, 3 and 77 respectively in 1952.

Classes II to V cover offences against property. Thieves predominate among the offenders in these classes and burglars and robbers whose serious crimes involve acts of violence are the next most numerous. In Class VI which includes miscellaneous offences the most numerous convictions are for offences connected with the improper operation of motor vehicles. In 1953 there were 337 offenders under the Opium and Narcotic Drug Act, of whom 286 were convicted of possessing heroin, 241 were males and 293 were born in Canada. British Columbia courts convicted 65.3 p.c. of the drug offenders and Ontario courts 25.2 p.c.

The increase or decrease for each classification in 1953 as compared with 1952 is given in Table 2.

¹ Includes abortion, assault against females or wife, indecent assault, carnal knowledge, incest, procuration, rape, attempted rape and seduction.

Table 3 shows that in 1953, 55.5 p.c. of the persons convicted of indictable offences had not gone beyond elementary school grades in education, 40.0 p.c. were 24 years of age or younger, 11.5 p.c. were 45 years of age or over, and 72.2 p.c. lived in urban centres. Of these offenders 94.0 p.c. were males, 89.4 p.c. were born in Canada, 54.9 p.c. were unmarried, 25.9 p.c. were recorded as labourers and 6.3 p.c. had no remunerative employment. These percentages have changed very little in recent years.

Female Offenders.—There were 1,766 female offenders convicted of indictable offences in 1953, 42.1 p.c. of whom were in Ontario and 17.6 p.c. in Quebec. Of the total convicted in that year 41.8 p.c. were found guilty of theft and receiving stolen goods and 11.5 p.c. were committed for assault. Six women were convicted of manslaughter.

4.—Females Convicted of Indictable Offences by Province 1952 and 1953

Disposition of Cases and Recidivism.—Of all suspects before the courts for indictable crimes in 1953, 86.9 p.c. were adjudged guilty; the convictions against males (87.3 p.c.) constituted a higher percentage than those against females (81.3 p.c.) and varied greatly as between provinces. Prince Edward Island showed the highest percentage (99.6 p.c.) of convictions and Nova Scotia the lowest (80.5 p.c.).

6.—Persons Charged and Convictions for Indictable Offences by Province 1952 and 1953

Sentences.—In 1953, 35.1 p.c. of the persons convicted of indictable crimes were fined, 34.3 p.c. were sent to gaol without option of fine, 5.0 p.c. were committed to reformatories and 7.0 p.c. to penitentiaries and 18.6 p.c. were given suspended sentences or put on probation. Five habitual criminals were given preventive detention, five persons received life sentences and 10 were given the death penalty. The proportions in 1953 were much the same as in recent preceding years.

Subsection 2.—Young Adult Offenders (16-24 Years)

Young men and women from 16 to 24 years of age each year form about 40 p.c. of the criminal population who commit indictable offences but they comprise less than 20 p.c. of the total population 16 years of age or over. As this age group includes some of the most daring offenders who may be already experienced criminals as well as first offenders likely to be turned from crime by further education and training, it seems worth while to give consideration to offenders in this group as distinct from offenders in the older age groups.

Of the young offenders in 1953, 71.2 p.c. were tried in three provinces—Ontario 37.4 p.c., Quebec 21.9 p.c., and British Columbia 11.9 p.c.; 44.9 p.c. of them were still under 20 years of age.

11.—Young Adult Offenders by Age Group, Sex and Province 1953

Age Group and Sex	Nfld.	P.E.I.	N.S.	N.B.	Que.	Ont.	Man.	Sask.	Alta.	B.C.	Yukon and N.W.T.	Canada

Totals.....	216	81	670	282	2,596	4,426	595	497	1,039	1,413	17	11,832

In 1953, 28 of the 73 men found guilty of manslaughter and 19 of the 43 convicted of rape were under 25 years of age; 62.9 p.c. of the men found guilty of burglary and robbery were in that group as well as 46.8 p.c. of those convicted of offences against property without violence, which includes all thefts, 79.7 p.c. of those responsible for stolen automobiles, 50.6 p.c. of those who maliciously damaged property, 41.1 p.c. of those found carrying offensive weapons and 47.2 p.c. of the prison escapers.

There were 1,766 women offenders in 1953, 641 of them under 25 years of age; nearly half (311) of the young offenders were guilty of receiving stolen goods. Of the 96 women convicted under the Opium and Narcotic Drug Act, 33 were in the young group as were 29 of the 60 found guilty of forgery and uttering; 3 of the 15 female prison escapers were also young women.

12.—Young Adult Offenders Convicted of Indictable Offences by Class of Offence and Sex 1952 and 1953

¹ Includes abortion, assault against females, assault against wife, indecent assault, carnal knowledge, incest, procuration, rape, attempted rape, seduction and wife desertion.

Table 13 shows the proportions of young offenders per 100,000 population in three age groups.

13.—Numbers per 100,000 Population of Young Adults Convicted of Indictable Offences by Age Group 1952 and 1953

Age Group	1952			1953		
	Offenders	Per 100,000 Population in Respective Group	Change from Preceding Year	Offenders	Per 100,000 Population in Respective Group	Change from Preceding Year
	No.		p.c.	No.		p.c.
16-17 years.....	2,538	596	-8.7	2,686	622	+5.8
18-19 ".....	2,891	680	+4.9	2,629	615	-9.1
20-24 ".....	6,464	588	+2.2	6,517	592	+0.8

The sentences meted out to these young people vary somewhat from those given to offenders over 24 years of age. Usually a higher proportion of them are given suspended sentences, put on probation or sent to reformatories and a lower proportion fined or given gaol sentences.

14.—Disposition of Sentences for Indictable Offences by Sex 1953

Disposition of Sentences	Males		Females	
	16-24 Years	25 Years or Over	16-24 Years	25 Years or Over
	No.	No.	No.	No.
Suspended sentence.....	1,060	1,057	99	177
Probation.....	1,898	987	162	142
Fine.....	3,027	6,808	126	410
Gaol.....	3,666	5,989	190	310
Reformatory.....	810	562	54	52
Penitentiary.....	818	1,199	10	34
Death.....	2	8	—	—

Through the system of suspended sentence and probation supervising, many young offenders receive another chance to make good and reformatory training gives others an opportunity to better their employment possibilities. It is interesting to note that 32.6 p.c. of the young male offenders in 1953 were recorded as labourers, indicating that they had no particular skill by which to earn a living; the proportion of male offenders over 25 years of age recorded as labourers was 24.1 p.c. Those recorded as students made up 3.8 p.c. of the youths and 5.1 p.c. were reported as unemployed as compared with 1.3 p.c. of the older men. Approximately two of every three lived in urban centres.

Subsection 3.—Convictions for Non-indictable Offences

Non-indictable offences—those not expressly made indictable—include all offences against provincial statutes and municipal by-laws. Non-indictable offences are triable by magistrate or justice of the peace under Part XV of the Criminal Code or under the provincial summary convictions Acts, as the case may be.

It is debatable how far summary convictions are of a criminal nature and how much their increase indicates an increase in crime. Many are breaches of municipal by-laws and contrary to public safety, health and comfort as, for example, parking violations or exercising callings without licence, but they do not involve violence, cruelty or serious dishonesty. On the other hand, offences as serious as cruelty to animals and contributing to juvenile delinquency are included under this classification and such indictable offences as common assault and driving with ability impaired may be tried on summary conviction.

Summary convictions increased by 12.6 p.c. to 1,763,622 in 1953 from 1,565,707 in 1952. Increases were general in all provinces except Prince Edward Island.

15.—Convictions for Non-indictable Offences by Province 1944-53

NOTE.—Figures for years before 1951 are for the 12 months ended Sept. 30, 1951; 1952 and 1953 figures are for the calendar year. Statistics for the intervening months, October-December 1950, are given in DBS report, *Statistics of Criminal and Other Offences*. Figures for 1900-43 are given in the corresponding table of previous Year Books beginning with the 1933 edition.

Year	Nfld.	P.E.I.	N.S.	N.B.	Que.	Ont.	Man.	Sask.	Alta.	B.C.	Yukon	N.W.T.	Canada

1950.....	...	2,095	13,137	21,732	280,868	617,565	79,079	22,717	28,344	117,729	553	172	1,183,991
1951.....	...	2,195	14,850	25,660	207,648	671,893	118,217	22,467	39,956	139,304	950	304	1,308,466
1952.....	6,191	2,578	14,977	31,905	312,892	819,253	135,034	31,618	50,443	158,967	1,342	507	1,565,707
1953.....	6,315	2,529	17,292	33,308	352,009	960,764	135,757	34,764	57,463	161,382	1,432	607	1,763,622

In considering statistics of summary convictions it should be remembered that such convictions are greatly influenced by the customs of the people and by the application and degree of enforcement of municipal regulations. These differ from place to place and from year to year and affect non-indictable offences more than they do indictable crimes.

In 1953 increases appeared in convictions for driving while intoxicated, dangerous and reckless driving, petty thefts and in convictions for offences against the Food and Drugs Act, the Inspection and Sale Act, the Railway Acts, the Master and Servant Act and the Highway Traffic Act. Offsetting these increases was the considerable decline under the item "Radio without a licence", a requirement no longer in effect. Decreases were also shown for offences against the Wartime Prices and Trade Board Act, which should decline yearly, the Weights and Measures Act and the Prairie and Forest Act.

16.—Convictions for Non-indictable Offences by Type 1949-53

NOTE.—See headnote to Table 15, p. 326.

Type of Offence	1949	1950	1951	1952	1953	Increase or Decrease 1952-53

1952.....	2,565	765	5,109	20,358	266,835	714,810	122,647	19,749	25,693	132,123	368	1,311,022
1953.....	2,719	760	6,014	21,296	309,064	857,117	122,370	21,957	30,846	133,295	493	1,505,931

For the year 1953 Ontario, with 44.8 p.c. of the registrations of motor vehicles in Canada, had 56.9 p.c. of the total convictions for breaches of traffic regulations; Quebec in the same year had 17.0 p.c. of the registered vehicles and 20.5 p.c. of the convictions. In interpreting the figures in this way however it should be pointed out that traffic regulations are by no means uniform throughout Canada and no account is taken of the differences in the degrees of urbanization in the provinces. These two provinces have large urban centres but in provinces with lower degrees of urbanization, such as the Atlantic Provinces, Saskatchewan and Alberta, convictions are lower when considered in proportion to the number of motor vehicles registered.

Convictions for Drunkenness and Offences against the Liquor Acts.—In considering these convictions it should be noted that the same person may and often does appear before the courts on such charges more than once within a year and that the number of convictions may thus be well above the number of persons convicted.

18.—Convictions for Drunkenness by Province 1944-53

NOTE.—See headnote to Table 15, p. 326.

Year	Nfld.	P.E.I.	N.S.	N.B.	Que.	Ont.	Man.	Sask.	Alta.	B.C.	Yukon	N.W.T.	Canada

There is general interest in the relation of alcoholism to crime but, when examining statistics to support the assumption that some crimes are associated with the consumption of liquor, it should be observed that accurate interpretation would necessitate allowance for population variables such as age and sex distribution and other classifications according to social and economic status, etc.

19.—Convictions for Offences against the Liquor Acts by Province 1944-53

Convictions of Females.—The number of convictions against females for non-indictable offences was lower in 1953 by 16.5 p.c. as compared with 1952. Manitoba, New Brunswick, Ontario, Prince Edward Island, Nova Scotia and British Columbia recorded percentage decreases of 38.5, 25.5, 21.8, 17.6, 12.1 and 9.2 respectively. Traffic offences were the cause of 82.5 p.c. of all summary convictions against women but such convictions decreased by 19.3 p.c. in 1953 compared with 1952.

20.—Convictions of Females for Non-indictable Offences by Province 1949-53

Section 3.—Juvenile Delinquents

The Juvenile Delinquents Act defines a child as "any boy or girl apparently or actually under the age of 16 years". Provision is made however by which the Governor General in Council may proclaim that in a province the definition of a child be a "person under the age of 18 years". This has been done in British Columbia, Manitoba and Quebec. In Alberta the age of juvenile boys is "under 16 years". Newfoundland considers a juvenile to be a girl or a boy of under 17 years of age. For uniformity the figures relating to juveniles compiled by the Dominion Bureau of Statistics refer to the younger ages of under 16 years only and deal primarily with cases disposed of by the courts.

The fact that juvenile court statistics furnish the most comprehensive figures collected on a countrywide basis makes it important that their possibilities and limitations be understood. This Section gives an account of juvenile delinquency in Canada from the viewpoint of legal action taken, for in the eyes of the law a *child is a delinquent only when he or she is adjudged before the court to have committed a delinquency*. To many people the term 'juvenile delinquent' has a broader interpretation but that adopted in this Section does not include those boys and girls whose misdemeanours have not been reported to the courts or who have been given the necessary advice and aid from their parents, their school, the police or a child care agency. Moreover it does not include those cases that are handled unofficially by the court, where the judge or probation officer makes an adjustment without filing a legal record of the offence. The tendency to follow this practice and thus keep children's names from court records is growing and may account to some extent for the decreasing number of recorded court cases.

These statistics represent cases of delinquency reported to the courts, from the most trivial infractions to the most serious, that of murder. The number of cases brought before the courts is influenced by such factors as personnel and facilities of the court, community interest in and understanding of the function of a juvenile court, and by variations in the policies of the courts in the disposition of cases. As more courts are established the additional returns may exaggerate an apparent increase in delinquency or may underestimate a decrease. In some communities the juvenile court is the only available agency to provide services to children; in others there are well established agencies serving children of which the juvenile court is only one.

It should be noted too that the total figures do not represent the actual number of children charged and found guilty but rather tend to exaggerate them, for a child referred to the court two or more times during the year for different offences is counted

as a different case each time. Neither do the figures represent the number of offences committed by offenders, as when a child is charged with more than one delinquency at a hearing only the most serious offence is counted.

Reports of juvenile delinquents were received in 1953 from 158 of the 167 judicial districts. Fifteen of these had no cases to report. Separate reports were received in 1953 from 161 incorporated urban centres of 4,000 population or more.

Juveniles Before the Courts.—The number of cases of juveniles brought before the courts in 1953 was 7,829, an increase of 8.5 p.c. over 1952. Nova Scotia and Quebec showed the greatest percentage increases among the provinces.

22.—Juveniles brought before the Courts by Province 1949-53

NOTE.—Statistics for 1949 are for the 12 months ended Sept. 30; figures for 1950-53 are for the calendar year. Statistics for the three intervening months, October-December 1949, are given in DBS report *Juvenile Delinquents, 1950*. Figures for Newfoundland are included for the first time in 1951.

Children Adjudged Delinquent.—Over a period of ten years it has been found that between 80 and 90 p.c. of the children brought before the courts each year have been adjudged delinquent. The number of delinquents in 1953 was 6,377, an increase of 5 p.c. over 1952. As with the number of juveniles brought before the courts, the major increases in 1953 were shown in Nova Scotia and Quebec.

Offences.—Thieving is the most prevalent delinquency among boys and, together with receiving stolen goods, was the reason for shop appearance in 40·2 p.c. of all cases in 1953. Burglaries, robberies, house- and shop-breaking were committed by 24·3 p.c. of the delinquent boys and another 13·1 p.c. committed wilful acts against property. Only 2·7 p.c. of the boys were guilty of offences against the person and 49·3 p.c. of these were charged with common assault.

Incorrigibility (33·6 p.c.) and thefts (16·4 p.c.) were the complaints against 50 p.c. of the delinquent girls in 1953.

25.—Juvenile Delinquents by Group of Offence and Ratio per 100,000 Population 7-16 Years of Age 1944-53

Totals.....	6,198	6,418	6,644	6,068	6,377

Sex and Age.—Juvenile delinquents are predominantly boys. The proportion for all offences in 1953 was approximately one girl to eight boys, a ratio which has remained much the same over a long period. Juveniles of 13 to 15 years of age comprised the majority of delinquents in 1953, 69·6 p.c. in the case of boys and 86·0 p.c. in the case of girls. However, 272 boys and 10 girls (4·4 p.c. of the children) were under 10 years of age.

27.—Percentages of Delinquent Boys and Girls by Age Group 1952 and 1953

NOTE.—See headnote to Table 22, p. 331.

Education and Employment.—Many causes contribute to backwardness in school work. The retarding influence may be illness, over-crowding in the home, disturbed family situations or dull mentality. Presuming that six years is the usual age for entering Grade I, 43.4 p.c. of the boys and 52.0 p.c. of the girls in 1953 were reported to be two or more years below the normal grade for their age and 3.9 p.c. of the boys and girls were a year or more above it.

Well over half of the boys had attained Grade VII and more than half of the girls Grade VIII at the time of delinquency. The majority of boys who had left school had reached Grades VI to VIII and the girls, Grades VII to IX. Some high school education had been achieved by 17.7 p.c. of the boys and girls.

In 1953, 9.2 p.c. of the delinquent boys and 16.1 p.c. of the delinquent girls were not attending school. At the time of leaving school their ages ranged from 11 to 15 years, the majority being between 14 and 15 years. Nearly 24 p.c. of the delinquent boys, having left school, were unemployed. The largest group of wage earners (70) were recorded as day labourers. The next largest group (63) were in occupations concerned with transportation, such as messengers, helpers on milk delivery routes, truck drivers' assistants, etc. More than a third of the girls were idle after leaving school. Factory work, domestic and personal service were the main occupations of those who were employed.

Birthplaces of Juvenile Delinquents and their Parents.—Canada was the country of birth of 96.2 p.c. of the juvenile delinquents in 1953 (the place of birth was not recorded in 1.1 p.c. of the cases). One hundred and seventy-four (2.7 p.c.) were born in the British Isles, Europe, the United States, China and Latin American countries. Ontario was the province of residence of 62.1 p.c. of those born outside Canada.

Both parents of 72.4 p.c. of the delinquent children in 1953 were born in Canada and another 13.4 p.c. had one parent born in this country. To evaluate these figures comparison should be made of population ratio of children from 7-15 years of age whose parents were Canadian-born with those whose parents were born elsewhere.

Home Circumstances.—The type of home in which he lives and the amount and quality of supervision he receives are important factors in a child's behaviour. The statistics of the marital status of the parents and the place and type of residence of the child reflect home conditions and are worth recording as possible reasons for social or emotional maladjustment. The parents of 74.2 p.c. of the delinquent children were reported to be living together in 1953 but homes broken by separated parents, divorce or death was the background of 20.8 p.c. of the delinquent boys and girls. The mothers of 10.1 p.c. of the juvenile delinquents were employed other than in the home and the mothers of another 3.4 p.c. were dead. The fathers of 7.4 p.c. of the cases were deceased. For every four juveniles who appeared in court, three resided in an urban centre and one in a rural district. Of these boys and girls, 87.9 p.c. were living in their own homes at the time they got into difficulties; 5.3 p.c. of them were in foster homes, either with a relative or some other person, and institutions were the homes of 1.4 p.c. of them.

Sources of Complaint.—The police were the complainants in the majority of juvenile cases, 80.2 p.c. of the boys having been charged by them. Probation officers and parents were responsible for 2.6 p.c. and 2.5 p.c. respectively, of those charged. School authorities referred 2.1 p.c. of the boys to the courts and social agencies another 0.7 p.c.

The proportion (51.8 p.c.) of girls charged by the police was considerably less than the proportion of boys. Parents made more use of the courts for girls than for boys (17.6 p.c.). School authorities laid complaints in 6.3 p.c., probation officers in 6.8 p.c. and social agencies in 6.3 p.c. of the girls' cases.

Repeaters.—In 1953 approximately one in every five children brought before the courts failed to heed the first warning and made at least a second appearance. In that year 81.1 p.c. of the delinquent children appeared before the courts for the first time, 11.8 p.c. were second offenders, 3.6 p.c. third, and 3.5 p.c. were dealt with by the courts four or more times.

29.—First Offenders and Repeaters of Major Offences 1944-53

NOTE.—See headnote to Table 22, p. 331.

1953 ¹	6,377	5,170	752	230	124	101	1,207	18.9

¹ Includes minor offences.

Disposition of Cases.—In 1953 not quite one-half of the children's cases (48·3 p.c.) were heard within four days of the charge and slightly over two-thirds (68·5 p.c.) within nine days. However 9·9 p.c. of them had to wait at least two weeks and 6·7 p.c. waited a month or more before the first hearing. These waiting periods may be explained in various ways.

Some county courts sit only twice or even once a month. Hearings may be deferred because of sickness in the family, school examinations, stormy weather or long distances. The chief cause for delay however is the time it takes to investigate the facts properly. The probation officer, and frequently there is only one to a court, has to find out what occurred at the time of the delinquency; he must get in contact with the parents and the school, learn something of the home situation, perhaps arrange medical or psychiatric examinations and explore community resources. The disadvantage of a long waiting period is outweighed by the assistance the court receives in deciding the form of treatment best suited to the child's needs and the type of care that will be the most economical for the community. For these intervening days or weeks most children are left in their own homes while a minority are placed in detention homes and, in the long run, whether the effect of the waiting period is good or bad is determined by the care given the youngster during that time.

Juvenile court judges heard 91·4 p.c. and magistrates 8·2 p.c. of the juvenile cases before the courts. The balance were heard by justices of the peace. The proportion of those declared delinquent (93·6 p.c.) in the magistrate's courts was greater than in the juvenile courts (80·4 p.c.). In the former court 6·1 p.c. of the cases were dismissed while in the juvenile courts only 2·4 p.c. were dismissed but 17·2 p.c. were adjourned *sine die*.

Some courts consider children whose hearings are adjourned *sine die* as delinquent while others do not but, for the sake of uniformity in this report, the latter point of view is maintained by the Dominion Bureau of Statistics. In assessing the total problem of juvenile delinquency however cases adjourned *sine die* have to be taken into account for, when the proportion of cases dealt with in this way increases, the proportion of those declared delinquent declines.

30.—Juveniles before the Courts, Dismissed and Delinquent 1949-53

NOTE.—See headnote to Table 22, p. 331.

Sentences for delinquent boys usually differ somewhat from those for girls. In 1953 the proportion of boys put on probation was 43·6 p.c. and of girls 47·3 p.c. Fines or restitution were meted out to 19·5 p.c. of the boys but to only 5·4 p.c. of the girls. This is because damage to property, for which restitution seems a reasonable adjustment, is committed relatively more often by boys than by girls. A much larger proportion of girls (36·9 p.c.) than boys (15·0 p.c.) were sent to training schools. Final disposition of case was postponed for 7·0 p.c. of the girls and 17·8 p.c. of the boys were given suspended sentences.

Section 4.—Police Forces

The Police Forces operating in Canada are organized under three groups: (1) the Federal Force, which is the Royal Canadian Mounted Police whose operations cover a very wide field in addition to purely police work; (2) Provincial Police Forces—the Provinces of Ontario and Quebec have organized their own Provincial Forces, but the other provinces engage the services of the Royal Canadian Mounted Police to perform parallel functions within their boundaries; (3) Municipal Police—every city of reasonable size has its own police organization which is paid for by the local taxpayers and which attends to police matters within the borders of the municipality concerned.

Subsection 1.—The Royal Canadian Mounted Police*

The Royal Canadian Mounted Police is a Civil Force maintained by the Federal Government. Organized in 1873 as the North West Mounted Police, its duties were confined to what was then known as the North West Territories. By 1904 the work of the Force received signal recognition when the prefix "Royal" was bestowed upon it by King Edward VII. In 1905 when Alberta and Saskatchewan were constituted Provinces an arrangement was made whereby the Force continued to discharge its duties as formerly, each Province making a contribution towards defraying the cost. This arrangement was continued until 1917.

In 1918 the Royal North West Mounted Police was assigned the duty of enforcing Dominion legislation for the whole of Canada west of Port Arthur and Fort William. Soon after the end of World War I an extension of governmental activities made it obvious that the enforcement of Dominion statutes throughout Canada must be the responsibility of a Dominion Force and therefore the jurisdiction of the Royal North West Mounted Police was extended to the whole of Canada early in 1920. In that year the name of the Force was changed to the Royal Canadian Mounted Police and the former Dominion Police with Headquarters at Ottawa, whose duties were largely connected with guarding public buildings in that city and Canadian Government dockyards at Halifax, N.S., and Esquimalt, B.C., was absorbed by the Royal Canadian Mounted Police.

Organization.—The Force is controlled and administered by a Minister of the Crown (the Minister of Justice). Its Commissioner has the rank and status of a Deputy Minister. Officers are commissioned by the Crown and are selected from serving non-commissioned officers. The Force is divided into 17 Divisions, including the Marine Division with Headquarters at Ottawa, Ont. There are 613 detachments distributed over the entire country. Its land force transportation consists of 1,359 motor vehicles, most of

* Revised by Commissioner L. H. Nicholson, M.B.E., Royal Canadian Mounted Police, Ottawa.

which are fitted with two-way radio sets connecting with wireless stations operated by the Force. Such stations operate in both Western and Eastern Canada, including the Quebec-United States boundary area. The "Air" Division of the Force operates ten aircraft of various types. The strength of the Force is 4,499 officers and men, with a reserve strength of 299. The reserve strength is located chiefly in the larger cities where men can be congregated easily and where instruction can be given in the evenings.

The Marine Division has a strength of 222 officers and men and operates 26 ships of various kinds, the majority of which are located on the Atlantic and Pacific Coasts and on the Great Lakes.

The Personnel Branch of the RCMP has officers in each Division across the country. Great care is taken in the selection of recruits.

Duties.—The Royal Canadian Mounted Police is responsible for enforcing federal laws throughout Canada and is specially empowered to deal with infractions against smuggling by sea, land and air. It also enforces the provisions of the Excise Act and is responsible for the suppression of traffic in narcotic drugs. In all, the Force has responsibility in over 50 Federal Government Acts including the Indian Act. It also assists many departments of the Federal Government in administrative duties and is responsible for the protection of government buildings and property. It is the sole police force operating in the Yukon and Northwest Territories. Furthermore it undertakes secret and security services for the Federal Government. In addition to its federal duties agreements have been made with the Provinces of Alberta, Saskatchewan, Manitoba, Nova Scotia, New Brunswick, Prince Edward Island, Newfoundland and British Columbia whereby the services of the Royal Canadian Mounted Police can be secured to enforce provincial laws and the Criminal Code in rural districts upon payment for such services. The agreement with Saskatchewan has been in existence for 26 years and those with the Provinces of Alberta, Manitoba, New Brunswick, Nova Scotia and Prince Edward Island for 22 years. The agreements were entered into with the Provinces of Newfoundland and British Columbia in August 1950 and the police forces of those Provinces were absorbed by the Royal Canadian Mounted Police. The Force has agreements also for policing more than 124 district municipalities, cities and towns.

Other Services.—The services of RCMP experts in fingerprints, crime-index information, examination of firearms and questioned documents are available to all other police forces in Canada. A *Police Gazette*, issued monthly and containing instructional articles on police work as well as the latest information on wanted or missing persons, is sent to all police forces across the country. The RCMP has two Police Colleges that are open to selected personnel from other police forces in Canada and to a more limited number of those outside its boundaries.

In recent years the Force has given special attention to crime prevention as well as detection and has done much to assist young people in those provinces where the Force acts as the provincial police in developing a healthy outlook towards the police, law, order and responsible citizenship.

A book entitled *Law and Order in Canadian Democracy*, containing twenty essays, has been issued by the Force and is available through the Queen's Printer, Ottawa.

Subsection 2.—Provincial Police Forces*

Quebec Provincial Police Force.—This Force is responsible for upholding law and order over the whole territory of the Province from the provincial boundary between Ontario and Quebec to the Magdalen Islands in the Gulf of St. Lawrence. The Force is composed of about 900 men in charge of a Director, who acts under direct orders from and is responsible to the Attorney-General of the Province.

* Revised by Geo. A. Shea, O.B.E., Secretary-Treasurer, Chief Constables' Association of Canada, Montreal, Que.

To facilitate operations the territory is divided into two almost equal parts designated as the District of Montreal and the District of Quebec. The Director has his office at Montreal and an Assistant Director is situated at the city of Quebec. Working under these Directors are two Deputies and an Inspector General. In each District the Police Force is divided into three sections: the detective corps, the constabulary and the traffic officers; each section is in charge of a captain supported by a number of lieutenants and sergeants.

A province-wide frequency modulation radio-communication system has been established at Montreal. A main station operating on the top of Mount Royal directs radio equipped cars within a radius of between 60 and 80 miles around Montreal; similar stations operating from the cities of Quebec and Three Rivers direct the mobile units operating in their respective areas. Substations operate at each of the eight bridges giving access to or exit from the city of Montreal and a number of cars, all equipped with frequency modulation three-way radio units, patrol the surrounding country day and night.

Ontario Provincial Police.—Maintained by the Ontario Government under the Attorney-General's Department, the Force is responsible for law enforcement in the rural and unorganized parts of the Province and in certain municipalities by contract.

The development of the Force from its beginning in the early years of Confederation to the passing of the Police Act in 1946 is outlined in the 1950 Year Book, pp. 332-333.

The Force, with a strength of approximately 1,416 in 1954, consists of a General Headquarters at Toronto and 16 Districts with headquarters respectively at Chatham, London, Dundas, Niagara Falls, Newmarket, Mount Forest, Barrie, Peterborough, Belleville, Perth, Cornwall, North Bay, Sudbury, Timmins, Port Arthur and Kenora. Each District has detachments adequate to meet law enforcement requirements. A Criminal Investigation Branch under the command of a Chief Inspector is maintained at Toronto to handle crimes of a major nature.

The installation of one of the largest police frequency-modulation radio systems in the world has placed at the command of the police a most efficient method of combatting every type of lawlessness. There are in operation 59 fixed stations, together with 448 two-way radio cruisers and four cabin cruisers, one each on Lake Temagami, Lake Simcoe, Lake Nipissing and Georgian Bay. The 250 watt station at each District Headquarters is open 24 hours daily and many of the cars are on continuous round-the-clock patrol.

Up to December 1954, 83 municipalities had availed themselves of the provisions of the Police Act for the policing of their municipalities by the Ontario Provincial Police.

Subsection 3.—Municipal Police Statistics

Police statistics were submitted for the year 1953 by Chiefs of Police in 245 urban centres, 16 district communities, 16 townships and one unorganized district, all of 4,000 population or over. The ratio of police per 1,000 population in urban centres of 4,000 population or over was as follows:—

<i>Province</i>	<i>Police per 1,000 Population</i>	<i>Province</i>	<i>Police per 1,000 Population</i>
Newfoundland.....	2.1	Manitoba.....	1.4
Prince Edward Island.....	1.1	Saskatchewan.....	1.1
Nova Scotia.....	1.1	Alberta.....	1.3
New Brunswick.....	1.5	British Columbia.....	1.4
Quebec.....	1.6		
Ontario.....	1.4	CANADA.....	1.5

Summary police statistics are shown separately for urban centres of 10,000 population or over in each province in Table 32, with totals for centres of from 4,000 to 10,000 population. The figures in the column "Offences Known to the Police" include offences and attempted offences which became known to the police, having been reported by any person (including a police officer). Complaints about offences or attempts which, upon investigation, prove to be groundless are not included. Offences known to the police provide the basic data for estimating the prevailing volume and trends of criminality.

Section 5.—Penal Institutions and Training Schools

Penal institutions may be classified under three headings: (1) penitentiaries, where prisoners have long sentences and the turnover is slow; (2) reformatories, where the turnover is also rather slow; and (3) common gaols, where the turnover is extremely rapid.

If the average of the figures for inmates at the beginning and at the end of the year be considered the average population for the year, and the number of discharged as the turnover, the turnover in the years 1952 and 1953 was: in penitentiaries, 49 and 60 p.c.; in reformatories, 305 and 330 p.c.; and in gaols, no less than 1,589 and 1,647 p.c. respectively.

In considering these figures it should be borne in mind that the common gaol population changes from day to day and is made up partly of accused persons awaiting trial who may be either liberated or sent to a penitentiary or reformatory.

¹ Newfoundland included from 1951.

² In 1952 the Bowden Institution, Innisfail, Alta. and Young Offenders' Unit, South Burnaby, B.C. reported for the first time.

Subsection 1.—Penitentiaries

The Penitentiaries Branch of the Department of Justice is charged with the administration of the various penitentiaries of Canada. Eight institutions are included in the system, the two largest being at Kingston, Ont. and St. Vincent de Paul, Que. Others are

at Dorchester, N.B., Prince Albert, Sask., Stony Mountain, Man., New Westminster, B.C., Collin's Bay, Ont. and St. John's, Nfld.; the latter is operated under provincial authority and the figures for inmates of that institution serving sentences of two years or more are included for 1951-54 in Tables 34 and 35. A federal Training Centre was opened at St. Vincent de Paul in April 1952 for the treatment and training of offenders under 25 years of age. A Penitentiary Staff College was also set up at Kingston for the training of penitentiary officers through courses of instruction and training conferences. During the year ended Mar. 31, 1954 the average daily population of the penitentiaries was 4,722 and the total net cash outlay for maintenance for the year was \$7,623,691 or \$4.42 per inmate per day.

Females given penitentiary sentences in the various provinces are sent to the Prison for Women at Kingston, Ont. where special quarters and staff are maintained for their detention and supervision; inmates in custody on Mar. 31, 1954 numbered 95.

The Ticket-of-Leave System.—The parole system in Canada is legalized under the Ticket-of-Leave Act (R.S.C. 1952, c. 264) administered by the Minister of Justice. It is described in detail in the 1948-49 Year Book, pp. 305-308.

Subsection 2.—Reformatories and Other Corrective Institutions

A census of reformatories and of training schools is taken at five year intervals, the latest being June 1, 1951. At that date there were 13 reformatory and corrective institutions, four of which were for women. Enumeration cards were completed for 2,551 men and 141 women on June 1, 1951. In these institutions for adults 29 p.c. of the inmates were under 21 years of age at the time of admission and almost 50 p.c. were between the ages of 21 and 39 years. The proportion of single men was 63 p.c. and three out of four of the men whose residence was known lived in urban centres. More than one-half of the women (53.2 p.c.) were single and the majority (91.0 p.c.) of those whose residence was known lived in urban centres. From five to eight years of elementary school education were recorded for about one-half of the male and female inmates. Only 6.7 p.c. of the men were unemployed at the time of admission. On the other hand 20.6 p.c. of the women were unemployed and another 34.0 p.c. had never worked.

The revenue for the support of the institutions for men was derived chiefly from provincial funds (56.0 p.c.) and from the sale by the institutions of farm and industrial products (41.3 p.c.). To support the institutions for women, income was received from provincial funds (31.0 p.c.), municipalities (1.8 p.c.), sale of products (53.4 p.c.), donations and bequests (4.6 p.c.) and other sources (9.2 p.c.).

Summary statistics of inmates, movement of population, terms of sentence and penal record of inmates are given in the 1954 Year Book, pp. 311-313.

Subsection 3.—Training Schools

Reports on movement of population are received yearly from training schools and figures compiled therefrom are shown in Table 36 for the years 1949 to 1953.

¹ In 1952 Boscoville Training School for Boys, Rivière-des-Prairies, Que. reported for the first time.

The period of the financial year varied among the training schools. The last complete financial year before June 1, 1951 showed that the province concerned supplied about three-quarters of the funds for the support of such schools (77·2 p.c. for boys' schools and 70·6 p.c. for girls' schools) and the municipalities a little more than a tenth (12·5 p.c. for boys' schools, 10·2 p.c. for girls' schools). Other financial resources included fees paid by parents, donations, bequests, sale of farm and industrial products and laundry work. Nine of the schools for boys were provincially administered, five were administered by religious orders and one by a board of directors; eight of the schools for girls were administered by religious orders and four were under provincial authority.

Statistics of training schools compiled from the Census of 1951 are summarized in the 1954 Year Book, pp. 314-316.

PART I.—FORMAL EDUCATION*

Section 1.—Education in the Provinces

Elementary and Secondary Schools.—Two-thirds of all Canadian children of ages 5 to 19 inclusive are enrolled in Canadian schools for at least some time during the school year. The percentage increases from 65 p.c. at ages 5 to 9, to 93 p.c. for ages 10 to 14 and drops to 40 p.c. for ages 15 to 19. About 5 p.c. of those aged 20 to 24 are still in school.† Children are enrolled in public and private schools from kindergarten to university or in vocational or professional training schools. A summary of the organization and administration of these schools is given in the following paragraphs.

Education was left in the hands of the provinces by the British North America Act and each province has developed a system to meet its needs. Two distinct types of organization are easily discernible: (1) the French tradition found in the Roman Catholic schools of Quebec, and (2) the English tradition found in the Protestant schools of Quebec and in all other provinces. The Federal Government is responsible for education among the Indians and Eskimos and of all children in the Territories and in establishments of the Armed Forces.

The English Tradition.—The system of education in each province is established by legislation and administered by a Department of the Provincial Government under a Minister of Education who is a member of the Cabinet and is responsible to the Legislature.

Each of the Atlantic Provinces has provided for a Council of Public Instruction or Board of Education, an advisory group composed of the Premier, Minister of Education, Deputy Minister or Superintendent and certain other appointees. The Council in Newfoundland is made up of the Minister, the Deputy Minister and the Superintendent of Education of each of the four leading religious denominations.

* Sections 1 and 3 of this Part were prepared in the Education Division, Dominion Bureau of Statistics.

† Based on the 1951 Census of Canada.

Each Department of Education concerns itself with the general administration of the public schools, the conduct of examinations, the certification of teachers, the registration of private and trade schools, public and travelling libraries, correspondence courses and also the direct management and control of teacher training schools and vocational institutes.

Direct control and operation of the public schools are in the hands of local boards of school trustees who operate under the School Law, and are usually elected for terms of two or three years. They employ the teachers and administer the revenues received from provincial grants, local taxation and minor sources. Elementary education is free but school boards in some provinces charge nominal fees for secondary education. In Newfoundland fees may take the place of local taxation.

Larger units of administration, usually formed from a number of single school board units, exist in all provinces except for the Roman Catholic schools of Quebec, although in most provinces the local boards within the units remain with limited powers. These units may be geographical areas intended to be large enough to provide a sufficient number of high school students for a composite or county high school. The one room school may be continued for the elementary grades but generally provision is made for transporting children to central schools; or where this is not practical dormitories may be provided.

¹ Usually the school inspector, delegated to act where a board cannot be obtained.

² Included with independent local boards.

The basic organization of the school system is an eight year, or eight grade, elementary school which the child enters at age six and a four or five year high school; for college or university the basis is a three or four year course during which the student earns a degree in arts and science. Among the modifications to be found in one or more provinces are the following: the addition, as the base, of a one or two year kindergarten, now found in many cities and some towns; the reorganization of the 8-4 (year or grade) plan for elementary and high schools to a 6-3-3, 3-3-3-3, or 3-3-4-3 organization by year or grade; the addition of an extra high school year in two provinces; the addition of a year in arts and science ending in an honours degree for students with sufficient ability to specialize; and the provision of graduate study in a variety of fields in a number of universities.

Other variations, some as old as the systems themselves, concern vocational education and professional training. After completing eight years of elementary education pupils may enter vocational or commercial high schools. Composite schools offering options in academic, technical, agriculture and home economics courses are on the increase. Provincial

departments have established a number of technical schools and institutes where pupils enter after completing part or all of their high school grades. Courses are given in a wide variety of fields which require from a few months to three years for completion.

At college level students may enter upon professional training in such fields as law, medicine, theology and engineering, in some direct from high school, in others after completing part or all of a course in arts and science.

Professional teacher training is provided in normal schools or teachers' colleges where high school graduates enter for one or two years to qualify as elementary school teachers. Until recently high school teachers were generally university graduates who had completed one year of professional training at a college of education within the university. In several provinces the normal schools have been closed and prospective teachers enrol in a university faculty of education where they take professional and academic courses towards a degree. They may teach at the end of one or more years and return at their convenience for summer or regular courses to complete work towards the degree. To obtain a high school teacher's certificate work towards the degree must be completed.

Separation of elementary and secondary education is incomplete in rural areas and small villages where the school may comprise from eight to twelve grades, whether taught by one teacher or more, and some high school pupils must depend chiefly on correspondence courses. In most rural schools only an academic course is given.

Emphasis at the elementary level is on language, arithmetic, health and social studies (geography, history and civics), with varying amounts of time given to music, art, crafts, home economics and shop work. At the secondary level the curriculum varies from a fairly rigid course to a course providing a core of required studies supplemented from a variety of optional subjects.

In addition to Quebec and Newfoundland where schools are established on a sectarian basis, three of the provinces have enacted legislation under which religious minorities may organize separate schools. Except in Quebec, both "public" and "separate" schools follow the same course of study in the teaching of all subjects but religion.

All provinces permit the establishment of private schools at any level. At the elementary and secondary levels these enrol only about 1 p.c. of the school population of Canada although the percentage is somewhat higher in some provinces. Private schools include academic schools, business colleges, art schools and a wide variety of trade schools including a few which provide correspondence courses.

The French Tradition.—The Quebec Department of Public Instruction is represented in the Cabinet by the Provincial Secretary. Although the Superintendent of Public Instruction is the head of the Department, a Roman Catholic Committee and a Protestant Committee, in charge respectively of the education of Roman Catholics and of Protestants and others, constitute the Council of Education which formulates policy and superintends the administration of all educational matters. The Council however has no authority over many special and technical schools that come directly under other government departments. The Protestant schools have developed in the English tradition already described; the Roman Catholic schools follow the French tradition.

There are about 50 infant schools enrolling more than 4,000 boys and girls of ages 3 to 5. From the very beginning boys are separated from girls. Both sexes follow through the primary grades I to VII. The girls may then enter a *collège classique* leading to the universities and professional schools or enter the commercial or domestic arts section of the complementary primary schools for two or three years respectively; or they may enter the general section where they are prepared for the household science section after two years, the normal schools or the nursing schools after four years, or special schools for social service, home economics for teachers, etc. after five years.

At the end of the sixth or seventh year a boy may enter a *collège classique* for an eight year course ending with a baccalaureate, which is prerequisite for entrance to a professional course in university—or he may instead continue to the end of the primary course and then

spend two years in the complementary course. From this point he may enter a technical school or any one of four sections of the two year superior course—commercial, scientific, general or industrial. The general or scientific may lead to entrance to a teacher training school, the others to specialized schools and advanced courses in technical schools or, after another year of preparatory work, to the higher schools of applied science, commerce and agriculture affiliated with the universities.

The boy who neither enters the *collège classique* nor goes on to the complementary course may go directly from the primary course to a trade school or to one of the regional agriculture schools. These schools offer two year terminal courses.

Universities and Colleges.—The two types of elementary and secondary school organization—those following the English and American patterns and those in the French tradition—also characterize university organization. In the English language universities high school graduation is required for admission, and an increasing number of universities require senior matriculation standing on entry. Others, including most junior colleges, accept junior matriculation standing but, when this is done, an additional year of study is required for the university degree.

Entrance requirements vary somewhat according to the degree sought. The number of years required to reach a first degree ranges from three to seven, the greater number being required for certain professional degrees such as those in law and medicine. In arts and science students may take a general course or, with permission of the faculty, enrol in an honour course which requires an additional year and allows for greater specialization. The curriculum is usually organized on a school year basis for day classes. However part or all of the requirements for a degree may be met through attendance at summer school, evening classes and extension courses. Standing is usually based on examinations in each subject each year although there may be a comprehensive examination before graduation.

Most of the universities offer advanced work in at least one or two fields; several of the larger universities are equipped to offer a master's degree or a doctorate in a number of academic fields. The master's degree usually requires at least one year beyond an honours degree, during which courses are taken and a thesis prepared. The doctorate is usually earned at the end of two or more additional years.

Two avenues lead to the French universities. The first is from the *collège classique*, which provides eight years beyond six years of elementary school and leads to the bachelor's degree. The course attempts to provide a broad general background from study of the classics, humanities, philosophy and the sciences. It may be selected as a basis for entrance to the study of medicine, law, dentistry or other profession, or lead to study for a *licence* (equivalent to a master's degree) or doctorate in the arts. For the *licence* the student must meet prescribed requirements of courses, research and a thesis. The doctorate takes at least two more years. Steps have recently been taken to co-ordinate the primary superior schools and classical colleges by making it possible for students to enter the regular course of the classical college at the end of the eleventh year of schooling.

The second avenue to university is open to students who successfully complete the twelfth year at a primary superior school and who meet certain conditions of scholarship. These students may enter the faculties of science, commerce or engineering.

Section 2.—Education in the Territories*

Northwest Territories.—Education in the Northwest Territories is carried on under authority of the Northwest Territories Act, the School Ordinance and the Regulations thereunder. Day schools are operated by the Northern Administration and Lands Branch

* Prepared in the Department of Northern Affairs and National Resources, Ottawa.

of the Department of Northern Affairs and National Resources at Fort Smith, Hay River, Fort Resolution and Fort Simpson, where the inhabitants are predominantly white or of mixed blood, and at Fort McPherson, Fort Norman, Arctic Red River and Fort Franklin, where the inhabitants are predominantly Indians. Day schools for the education of Eskimos are operated by that Branch at Aklavik, Tuktoyaktuk, Coppermine, Chesterfield Inlet, Cape Dorset and Coral Harbour in the Northwest Territories and at Fort Chimo and Port Harrison in the Province of Quebec.

The Roman Catholic Church operates residential schools at Aklavik, Fort Providence and Fort Resolution and mission day schools at Fort Simpson and Fort Smith; the Church of England operates a residential school at Aklavik. The mission authorities of these churches and other mission organizations also conduct schools for Eskimos at a number of points in the eastern, central and western Arctic and in northern Quebec. Eldorado Mining and Refining Limited at Port Radium and the Discovery Yellowknife Mine in the Mackenzie District also operate day schools.

The only organized school districts are the Yellowknife Public School District No. 1 and the Yellowknife Roman Catholic Separate School District No. 2. The Public School District, established in 1939, operates a modern eleven classroom elementary and high school which was opened in 1947. The Separate School District was established in 1951 and operates a four classroom school.

A Superintendent of Schools, with headquarters at Fort Smith, periodically inspects the schools of the Mackenzie District. These schools follow the program of studies for elementary and secondary schools authorized by the Alberta Department of Education. In remote areas elementary and high school students have access to correspondence course studies issued by the educational authorities of Alberta and the cost is borne by the Territorial Administration. An inspection of all school facilities for Eskimo children in the Canadian Arctic is made annually by an Education Officer from Ottawa.

A modified elementary school curriculum is followed by some of the federal schools for Eskimos by way of meeting the unique needs in the Arctic regions and a suitable curriculum for teaching Eskimo children in mission schools is being considered. Because of their nomadic way of life, Eskimos seldom remain long at the settlements and the periods available to the missions for teaching the children are comparatively short. The Eskimos of the eastern Arctic have long had a system of syllabic writing (expressed as geometric phonetic characters) which most of them can read and write proficiently. Syllabic writing has been used successfully to provide educational material in the Eskimo language on health matters, hygiene and native economics for the benefit of both children and adults. It is hoped that the establishment of schools in Eskimo territory will be influential in teaching the Eskimos to understand, speak and read simple English.

A program designed to improve education and welfare facilities generally has been initiated in the Northwest Territories. The program now includes regular distribution of educational films, special radio broadcasts to classrooms, the provision of additional equipment and supplies and increased attention to methods of instruction. Schools are usually staffed by a particular classification of welfare teachers who carry on welfare and community work in the settlements in addition to regular teaching duties.

In the field of vocational training a program suitable for the Northwest Territories is being worked out. The work of implementing the details of this program in the Mackenzie District is the responsibility of the Vocational Training Co-ordinator whose headquarters is at Fort Smith.

Yukon Territory.—Public schools in the Yukon Territory are operated by the Territorial Government at Dawson, Mayo, Whitehorse, Carcross, Teslin, Watson Lake, Haines Junction, Kluane Lake, Brook's Brook, Swift River and Elsa. The Whitehorse school has three kindergarten departments. Roman Catholic Mission authorities maintain a school at Whitehorse and one at Dawson.

The schools in the Territory follow the program of studies of the British Columbia Department of Education. The public schools at Dawson and Whitehorse have high school departments providing education leading to university entrance. The university entrance (junior matriculation) examinations are held in June at Dawson and Whitehorse by authority of the Department of Education of the Province of British Columbia. Examination papers are forwarded from Victoria and are returned there for grading. In outlying districts correspondence courses are provided at a nominal fee by arrangement with the British Columbia Department of Education.

Educational matters in the Yukon Territory are in charge of a Superintendent of Schools, resident at Whitehorse, who is responsible to the Commissioner (*see* p. 95). Inspections of all schools are made periodically by the Superintendent.

The education of Indian children is carried on in day schools operated by the Indian Affairs Branch of the Department of Citizenship and Immigration and in residential schools operated by religious denominations. Full time day schools are maintained at Whitehorse, Carmacks, Mayo, Moosehide and Old Crow. Seasonal schools are conducted by the denominational workers at Ross River and elsewhere as opportunity arises. At Carcross there is a residential school operated under the auspices of the Church of England in Canada; a new building has been erected and was opened in September 1954. The Baptist church conducts a hostel at Whitehorse where Indian pupils are maintained at the expense of the Federal Government. These pupils attend the Whitehorse Indian School. Indian pupils of Roman Catholic affiliation attend the Indian residential school operated under Roman Catholic auspices at Lower Post, B.C., which is located close to the southern boundary of Yukon Territory. Residential schools in Yukon Territory receive a per capita grant for Indian children registered therein.

Section 3.—Statistics of Schools, Universities and Colleges

Educational institutions in Canada are here grouped in four divisions: provincially controlled schools, privately controlled schools, universities and colleges, and federal schools in the Territories and for Indians. The first three groups are dealt with in this Section, and information on Indian schools, with the exception of enrolment figures shown in Table 2, is included with the general material on the Indians of Canada given in the Population Chapter, at pp. 172-173.

The provincially controlled schools, both public and separate, are most numerous and account for about 90 p.c. of the total enrolment shown in Table 2. These schools are financed essentially through direct taxes on property (the amount fixed by local school authorities) and provincial grants. In addition there is a much smaller number of private schools in all provinces (i.e. schools that are not conducted by publicly elected or publicly appointed boards and are not financed out of public money). At the higher education level considerable provincial support is given to the six provincial universities and one or more colleges in each of the other provinces and some provincial aid is given to most of the other 16 private universities and 163 colleges giving degree credit courses. In addition all degree granting universities and colleges receive grants from the Federal Government.

Agricultural colleges and schools, showing location, courses offered and other pertinent information are given in the Agriculture Chapter, pp. 406-408.

Subsection 1.—Provincially Controlled Elementary and Secondary Schools*

Enrolment and Attendance.—At the elementary school level enrolments have been increasing steadily since the school year 1944-45. Birth registrations and immigration figures for the past few years indicate that this trend will continue and by 1959-60 the enrolment in the elementary grades will be 2,900,000 or more and in the secondary grades at least 532,000, a total of 3,432,000 compared with 2,645,000 in 1952-53.

* Academic and vocational day schools only.

Other factors responsible for the increase in enrolment include: the introduction of family allowances in 1945 which both improved attendance and kept greater numbers of pupils in school to the legal age limit; increased attention to vocational guidance and other means of keeping pupils in school; greater appreciation of the importance of completing secondary education; increased transportation facilities provided at public expense; the erection of dormitories in certain provinces; adoption of larger units of administration and the establishment of junior high schools and of composite schools to serve rural areas particularly.

Enrolment in provincially controlled schools for the latest school year available is given in Table 2 and average daily attendance is shown in Table 3.

3.—Average Daily Attendance in Provincially Controlled Schools by Province, School Years Ended 1944-53

NOTE.—Comparable figures for earlier years will be found in previous editions of the Year Book, beginning with the 1932 edition.

¹ Province reports totals only for Grades I to III and IV to VI; numbers for these individual grades are estimated. ² Includes 372 Grade XI students and 65 Grade XII students enrolled in Prince of Wales College.

Teaching Staffs.—In 1953-54 the teaching staffs of provincially controlled elementary and secondary schools consisted of 26,302 men and 71,721 women, a total of 98,023. Omitting Quebec, for which comparable data are not available, 38 p.c. of the teachers were in cities, 31 p.c. were in towns and villages, 20 p.c. were in one room rural schools and the remaining 11 p.c. in schools of two or more rooms outside of urban centres. Again omitting Quebec where 36 p.c. of the teachers were members of religious orders, approximately 30 p.c. of the women teachers were married. Of the total number of teachers in the nine provinces (excluding Quebec), about 8 p.c. had received little or no training. At least 15 p.c. of the teachers leave the profession each year.

Financial Support.—The public elementary and secondary schools are financed almost wholly from money derived from local taxation and provincial grants. Fees for elementary schooling may be charged in Quebec. In a few of the other provinces nominal fees are charged for the higher secondary grades; in Newfoundland there is little local taxation and fees are generally charged.

In general school boards submit their budgets to the local municipal councils which levy for and collect the required amounts. However school boards in Quebec and a few in other provinces have the power to levy and collect taxes for school purposes. Assessment, on which taxes for school purposes are levied, is the total valuation of land and buildings and sometimes improvements, personal property or business income are added in. Steps have been taken by several provinces to equalize land assessment over large areas or even the whole province.

Each province has its own method of apportioning funds to local school boards. Grants are of two types. (1) The basic grant may be calculated on a minimum cost determined by an amount per classroom, salary and qualifications of the teacher, average attendance, etc.—all provinces make some attempt to equalize educational opportunity through basing grants in part on some indication of need. (2) Special grants are paid to assist with transportation, music, arts and crafts, special classes, equipment, building costs, night classes, etc. and are largest in Quebec where there is marked emphasis on training for home industries, arts and crafts.

Newfoundland schools are financed largely from provincial funds. Tuition fees may be charged for Grades I to VIII except in St. John's College where fees may be charged for Grades I to XI. Fees may be charged also to provide for fuel and janitor work or these may be provided by the pupils' families. There is no local taxation for school

purposes. The Province pays the teachers according to class of certificate and experience and a few centres supplement this amount. The Province also makes an annual grant for plant maintenance and repairs and a building grant for new construction.

Table 6 presents a comparative statement of the finances of school boards operating provincially controlled schools in so far as this information is available from existing records.

6.—Income of School Boards of Publicly Controlled Elementary and Secondary Schools by Province, Fiscal Years Ended 1950-52

NOTE.—The receipts shown in this table do not include any amounts raised by loans or the sale of bonds or debentures as all revenue of this nature must be repaid ultimately with money raised by local taxation. Figures from 1914 are given in the corresponding table of previous Year Books beginning with the 1936 edition.

¹ Net figures, after deduction of sinking funds. ² Estimated. ³ Includes contributions to teachers' salaries and, in New Brunswick, grants made to schools by the Vocational Education Board. ⁴ Includes amounts raised by counties and township grants for salaries of rural public school teachers.

Subsection 2.—Private Elementary and Secondary Schools

Private schools include all those not operated by publicly elected or appointed boards. Except in Quebec they receive no support from public funds. Instruction is similar to that given in public schools except that more opportunities may be given for music,

dramatics, art, etc. and in schools under religious control there is greater emphasis on religious instruction. In most provinces there is some form of inspection or regulation by the provincial Department of Education.

Of the 853 private schools reporting in 1952-53, 544 were in Quebec, 113 in Ontario, 124 in the Prairie Provinces, 38 in British Columbia and 34 in the Maritimes. There were 5,293 full time teachers of whom 1,289 were men. Outside of Quebec the salaries for lay teachers in these schools ranged from \$1,000 to \$8,000 with a median of \$2,421. Salaries of members of religious orders are omitted as they are usually only nominal.

About 65 p.c. of the pupils in these schools, of whom 40,000 were girls and 28,000 boys, were in the elementary grades. At the secondary level there were 23,000 girls and 15,000 boys.

Private schools are financed largely from fees, legacies and gifts, or are supported by religious organizations. Annual fees vary widely—126 schools charge no fees or fees under \$50, three schools charge fees of \$500 or more for day pupils, eight boarding schools have no fees or fees of less than \$50, and 15 other boarding schools have fees of \$1,000 and up. The median fee in 1952-53 was \$90 for day schools and \$450 for boarding schools. Expenditures in that year amounted to over \$17,159,000, of which \$5,413,000 was paid out in teachers' salaries.

7.—Enrolment in Private Elementary and Secondary Schools by Province, School Years Ended 1944-53

NOTE.—Figures from 1921 will be found in the corresponding table of previous Year Books beginning with the 1937 edition. There is one small private school in Newfoundland.

Business Colleges.—Of the 134 business schools reporting in 1952-53 in eight provinces (exclusive of Quebec and Newfoundland), 15 were in the Maritimes, 76 in Ontario, 25 in the Prairie Provinces and 18 in British Columbia. These employed 118 men and 271 women as full time teachers and 28 men and 101 women as part time teachers.

In these schools, girl students far outnumbered boys and the enrolment in evening classes was greater than that in the full time day classes. The 1952-53 enrolments were: full time day classes, 8,446 girls and 1,323 boys; part time day classes, 1,833 girls and 384 boys; evening classes, 10,139 girls and 2,162 boys; correspondence courses, 617 girls and 163 boys. The total for the year was about 700 fewer than for 1951-52. More than three-quarters of the full time day students were from 16 to 19 years of age, inclusive.

Monthly fees ranged from \$6 to \$35 for day classes and from \$3 to \$15 for evening classes. Total operating expenditures for 1953 amounted to over \$2,500,000, of which \$1,162,000 went for teachers' salaries.

8.—Enrolment in Private Business and Commercial Schools (Business Colleges) by Province, School Years Ended 1944-53

NOTE.—Figures include day and evening classes. Those from 1921 will be found in the corresponding table of previous Year Books beginning with the 1937 edition.

Subsection 3.—Universities and Colleges

Total registration in universities and colleges for the academic year 1952-53 is shown in Table 9. In that year the full time enrolment of university-grade students was 65,174, a slight increase over the 63,499 students reported in 1951-52. In addition there were 29,341 high school and other students registered in the universities and another 69,828 taking part time and various short courses. Thus the total enrolment in all institutions in 1952-53 was 164,343.

The enrolment in Canadian universities of full time students from other countries has increased considerably during the postwar years. In 1952-53 almost half of the outside enrolment came from the United States. Table 10 gives a percentage classification of the outside enrolment for selected years and also the number of Canadian students studying in the United States in the same years.

Of the 65,174 full time university-grade students in 1953, 1,236 were in receipt of allowances from the Department of Veterans Affairs.

University Graduates.—Awards made during the 1952-53 session included 12,380 bachelor and first professional degrees, 1,421 masterships and licentiates, 270 earned doctorates as well as 284 honorary doctorates, and 6,727 diplomas and certificates.

11.—Graduates from Universities and Colleges, Academic Years Ended 1950-53

NOTE.—Figures for 1920-36 are given in the 1938 Year Book, pp. 993-997, and for 1937-49 in the corresponding table of subsequent editions.

Income and Capital Resources.—University income figures for 1951-52, as shown in Table 13, reflect the first payments of the Federal Government grants. Income distribution for the 1952-53 session was: government grants, 52.9 p.c.; student fees, 28.1 p.c.; endowments and investments, 5.9 p.c.; and other sources, 13.1 p.c. The proportion of receipts from investments and endowments has decreased steadily since 1931, when they represented 16.2 p.c. of the current income.

13.—Income and Capital Resources of Universities and Colleges, Academic Years Ended 1921-53

NOTE.—The larger universities and many of the colleges in Canada are included and represent an enrolment of approximately 80 p.c. of the full time students of university grade throughout the period. The institutions omitted are mainly those conducted by religious orders where teachers receive little or no salary and the financial returns are, consequently, not comparable.

Year	Current Income					Deficit ²	Surplus ²	Capital Resources		
	From Endowments and Investments	Government Grants	Student Fees ¹	Miscellaneous	Total			Land, Buildings and Equipment	Endowments	Trust Funds

¹ Board and lodging not included.

² Combined deficits or surpluses of schools reporting.

Memorial University of Newfoundland included for the first time.

³ Me-

The Federal Government, as a result of recommendations made by the Royal Commission on National Development in the Arts, Letters and Sciences, instituted a system of university grants, the first of which were paid during the academic year ended 1952. The grants are paid on the basis of 50 cents per head of population in each province, the eligible institutions receiving their share of the total provincial allotment on the basis of the number of full time students at university level attending degree courses. The distribution of payments, by province, is shown in Table 14.

PART II.—CULTURAL ACTIVITIES RELATED TO EDUCATION

An outline of the *Report of the Royal Commission on National Development in the Arts, Letters and Sciences*,* which was tabled in Parliament on June 1, 1951, is given in the 1952-53 Year Book, pp. 342-345.

Section 1.—Art and Education†

Fine Art Schools, Galleries and Museums.—Fine art appears as an elective subject of the faculty of arts in a number of universities, where it may be taken as one of five subjects for a year or two; in some, e.g., Acadia University, N.S., there are six or more elective courses. In Mount Allison University, N.B., and in the Universities of Saskatchewan and Manitoba, there is a sufficient number of courses to allow the taking of a Bachelor's degree with specialization in fine art. At the University of Toronto, Ont., an Honour B.A. in art and archæology is offered, as well as graduate work in this field. Departments of fine art were opened by McGill University in 1948-49, by the University of British Columbia in 1949-50 and by the University of Alberta in 1953-54; McMaster University reopened its department in 1951.

There are also schools of art not requiring any fixed academic standing for admission, as they are more concerned with the technical development of the artist. The most widely known of these are:—

- Nova Scotia College of Art, Halifax, N.S.
- Ecole des Beaux-Arts, Quebec, Que.
- Ecole des Beaux-Arts, Montreal, Que.
- School of Art and Design, Montreal Museum of Fine Arts, Montreal, Que.
- Ontario College of Art, Toronto, Ont.
- University of Manitoba School of Art, Winnipeg, Man.
- Provincial Institute of Technology and Art, affiliated with the University of Alberta, Calgary, Alta. (Summer session at Banff, Alta.)
- Vancouver School of Art, Vancouver, B.C.

Courses in these schools vary in length with the requirements of the individual student but may extend over as many as four years. Summer schools of art are sponsored by some of the foregoing institutions, by universities, and by various independent groups.

Public art galleries and museums in the principal cities perform valuable educational services among adults and children. Children's Saturday classes, conducted tours for school pupils and adults, radio talks, lectures and often concerts are features of the programs of the various galleries. Many of these institutions supply their surrounding areas with travelling exhibitions, and organizations such as the Maritime Art Association, the Western Canada Art Circuit, the Saskatchewan Arts Board and the Art Institute of Ontario, have been founded to carry on the work on a regional basis. The National Gallery of Canada has a nationwide program of this nature.

The principal art galleries and museums‡ are:—

- New Brunswick Museum, Saint John, N.B.
- Museum of the Province of Quebec, Quebec, Que.
- Montreal Museum of Fine Arts, Montreal, Que.
- National Gallery of Canada, Ottawa, Ont.
- London Public Library and Art Museum, London, Ont.
- Art Gallery of Toronto, Toronto, Ont.
- Royal Ontario Museum of Archæology, Toronto, Ont.
- Art Gallery of Hamilton, Hamilton, Ont.
- Willistead Library and Art Gallery, Windsor, Ont.
- Winnipeg Art Gallery, Winnipeg, Man.
- Regina College Gallery, Regina, Sask.
- Edmonton Museum of Arts, Edmonton, Alta.
- Vancouver Art Gallery, Vancouver, B.C.
- Arts Centre of Greater Victoria, Victoria, B.C.

* Ottawa, Queen's Printer, 1951.

† Revised under the direction of Alan Jarvis, Director, National Gallery of Canada, Ottawa.

‡ A complete list of Canadian art museums, societies and schools is included in the Canadian section of the current issue of the *American Art Directory* (New York, R. R. Bowker Co.).

The National Gallery of Canada.—Founded in 1880 by the Marquis of Lorne, the National Gallery at first served only as an exhibition gallery. Provided with an Advisory Arts Council in 1907, and first incorporated under a Board of Trustees in 1913, it has assembled a permanent collection mainly during the past 40 years. This collection of pictures and sculpture, prints and drawings, representing the styles, past and present, of various parts of the world, was assembled for public enjoyment, study, and the improvement of arts and industrial products, and as the necessary basis of a program of art education. The National Gallery Act, amended in 1951, gives the institution a larger Board of Trustees and other advantages.

The collection of the National Gallery today is of international repute and is accessible to the whole country by means of catalogues, photographs, colour reproductions and, to a limited extent, by loans. The Canadian section, naturally the most inclusive, is the best available source for the study of Canadian art. Each year, examples of the best contemporary work are added, along with those of earlier periods.

The National Gallery conducts a program of extension work throughout the country. The majority of exhibitions are available to the entire country and are widely circulated. About 30 such exhibitions are toured and as many as 200 separate showings have been held annually under the auspices of the National Gallery of Canada. In addition individual loans of material from the collection are made to centres in many parts of the country each year. In this way original works of art are constantly being brought to the attention of the public. Sets of reproductions are also sent on tour of localities that have not the facilities for handling originals.

The latest major development in the general educational work of the National Gallery is the Industrial Design Division set up as the result of public interest in bringing the design of Canadian goods up to the best international standards and in fostering distinctive Canadian designs. A number of exhibitions on Canadian industrial art have been held in various parts of the country. In 1953 the Design Centre was opened in the Laurentian Building, Ottawa, to serve as an exhibition centre and as headquarters for the national program in industrial design sponsored by the National Gallery.

Other methods of education in the arts apply more specifically to young people and are designed, in part, to supplement regular school work. The Gallery provides written lectures illustrated by lantern slides on all aspects of art history, reproductions of paintings with introductory texts for art appreciation, school broadcasts, classes for school children at the Gallery, exhibitions of children's art, conducted tours of the Gallery's collections and educational demonstrations. Lecture tours by wellknown authorities are also held throughout Canada.

The National Gallery also maintains a library of art films. These as well as the facsimile colour reproductions and silk screen prints published by the National Gallery are listed in the free leaflet, *Reproductions, Publications and Educational Material*. In connection with the CBC school broadcasts on Canadian artists, the National Gallery in 1953 distributed 250,000 small colour reproductions to school children in all parts of the country. The magazine *Canadian Art*, in the publication of which the National Gallery has taken a leading part, has doubled its circulation since 1945.

Speaking highly of the Gallery's work over many years despite serious difficulties, the *Report of the Royal Commission on National Development in the Arts, Letters and Sciences** made recommendations for the extension and improvement of its exhibition and education services; increases in funds, staff and facilities; maintenance and increase where possible of present appropriations for acquisitions; and, as soon as possible, a new building containing adequate facilities for display, storage, circulation of exhibitions and conservation of paintings.

Further details concerning recent purchases, exhibitions and lecture tours arranged by the National Gallery are contained in the *Annual Report of the Board of Trustees*.

* Ottawa, Queen's Printer, 1951. See also, *Royal Commission Studies, a Selection of Essays prepared for the Royal Commission*. Ottawa, Queen's Printer, 1951.

Other Art Organizations.—The leading art organizations of national scope, exclusive of museums and art galleries, include the following:—

Association of Canadian Industrial Designers
 Canadian Arts Council*
 Canadian Group of Painters
 Canadian Guild of Potters
 Canadian Handicrafts Guild
 Canadian Museums Association†
 Canadian Society of Graphic Arts
 Canadian Society of Painter-Etchers and Engravers
 Canadian Society of Painters in Water Colour
 Canadian Society of Landscape Architects and Townplanners
 Community Planning Association of Canada
 Federation of Canadian Artists
 Royal Canadian Academy of Arts
 Royal Architectural Institute of Canada
 Sculptors Society of Canada.

Section 2.—The Educational and Cultural Functions of the National Film Board‡

The National Film Board, an agency of the Federal Government, was established by Act of Parliament in 1939 and reconstituted by the National Film Act in 1950. In the years since its beginning the Board has grown from a supervisory body over Canadian Government motion picture activities to a national documentary film producing and distributing organization whose films about Canada are seen wherever people may freely assemble. The Board also produces and distributes filmstrips and still photos on Canadian themes in accordance with its primary function outlined in the Act, "to initiate and promote the production and distribution of films in the national interest."

Films and filmstrips are being more widely employed as adjuncts to formal teaching in schools and universities. In the fiscal year 1954-55 there were 86,077 showings in schools of films made or distributed by the National Film Board.

Films produced by the Board are also shown in commercial theatres and on television in Canada and abroad. Items particularly designed for theatre use include the *Canada Carries On* and *Eye Witness* series in English (*En avant Canada* and *Vigie* in French) as well as newsreel features. Distribution of these usually is arranged through the major film distributing organizations, whose facilities are worldwide.

The non-theatre program in Canada is based on a nationwide system of film circuits, film councils and libraries and is deeply rooted in community activities. In the year ended Mar. 31, 1955 no less than 462 film councils—voluntary groups promoting wider use of documentary films—were in existence and 420 film libraries and depots, assisted in the circulation of thousands of prints.

Canada's story on film is also being told abroad. In addition to commercial distribution through theatres and television, non-commercial circulation is carried on through posts of the Departments of External Affairs and Trade and Commerce, through National Film Board offices in London, New York and Chicago, and through libraries operated by various educational agencies. Hundreds of prints of National Film Board films are also sold in other countries each year. Exchange agreements are in effect between the Board and government film-producing organizations in other lands; this means that films of various nations are freely exchanged with Canada, aiding better international understanding.

The National Film Board maintains a library of more than 100,000 still pictures, which are available to magazines, newspapers and other periodicals to present current information about Canada.

* An account of the Canadian Arts Council and a list of its constituent bodies appears in the 1951 Year Book, p. 308.

† Formed in 1947 with the object of improving the services of museums as educational institutions by promoting co-operation among themselves, by exchange with other countries and by the training and securing of expert staffs.

‡ Prepared, under the direction of the Government Film Commissioner, in the Information and Promotion Division, National Film Board, Ottawa.

Section 3.—The Educational and Cultural Functions of the Canadian Broadcasting Corporation*

Many hours of educational or semi-educational programs are broadcast annually by the Canadian Broadcasting Corporation in the English and the French languages. Whether these programs are directed to children or adults, entertainment is combined with information whenever possible. Spoken-word programs cover a very wide range of interests and are presented as readings, talks, discussions, documentary programs, dramatizations or in forms combined with music.

Preschool Broadcasts.—Though many story programs for preschool-age children are broadcast purely as entertainment, a special series has been developed to give young children, particularly in remote areas, many of the benefits of kindergarten training. This series, *Kindergarten of the Air*, is broadcast Monday to Friday for children from three and a half to six years of age. Planned with the advice of kindergarten experts and representatives of the Canadian Home and School Federation, the Federation of Women's Institutes and the Junior League, it includes stories, songs, mental games, keeping-fit exercises, information about animal life and nature study, and encourages good habits of hygiene, eating and relaxation. The program is intended primarily for home listening but has been found useful in many organized kindergarten groups and classes.

School Broadcasts.—In an average school year more than 1,000 school programs, mostly in dramatized form, are broadcast to all parts of Canada. The CBC provides facilities for thirty-minute daily programs specifically planned by departments of education to meet classroom requirements. These supplementary aids help teachers to stimulate student imagination and strengthen motives for study. The National School Broadcasts series are planned by the National Advisory Council on School Broadcasting to promote among students a stronger consciousness of Canada and its achievements. During the 1954-55 season seven such series were planned for students from Grade IV to senior high school. These were: *Voices of the Wild*, on Canadian wildlife; *This Gift of Freedom*, a series to help students to a better understanding and appreciation of Canada's democratic way of life; *I Was There*, a series dramatizing outstanding events in Canadian history; *Julius Caesar*, a full-length performance of the Shakespearian drama; *Life in Canada Today*, a series of features on the work of Canadians; *Commonwealth Round-up*, comprising four programs on interesting aspects of other Commonwealth nations with specially recorded effects contributed by the broadcasting organizations in the United Kingdom, Australia, South Africa and India; *Music in the Making*, a series of five broadcasts in which a new approach to music appreciation was used—a composer, Wolfgang Mozart, tells about his life with particular emphasis on one of his works, *The 39th Symphony*, a movement of which was played in each program.

The first experimental television programs for school use were presented during November 1954. These were eight telecasts planned to provide a visual supplement to classroom study in social studies, literature, science and art. They were divided into two series, one for Grades V-VI and one for Grades VII-VIII. They were presented in an early afternoon period, and carried (on kinescope) by five CBC owned and 12 privately owned TV stations. Teachers were supplied in advance with a manual giving detailed information about each telecast and advice on its utilization. Approximately 513 classes including 18,000 students, covering eight provinces, saw the telecasts. A report on the teachers' evaluation of the experiment was published by the CBC under the title *Television in the Classroom*. It recommended further experiment with classroom TV.

School broadcasts in the French language are presented thrice weekly by the New Brunswick Department of Education for French-speaking schools in that Province.

Particulars of school broadcasts are contained in the manual, *Young Canada Listens*, published annually by the CBC.

* Prepared under the direction of J. Alphonse Ouimet, General Manager, Canadian Broadcasting Corporation, Ottawa. Other aspects of CBC services are outlined in Chapter XX.

Adult Education.—Programs of an adult education nature are presented frequently by the CBC on its radio and television services. In the planning of these programs co-operation is received from various educational organizations. The CBC is an active participant in the work of the Joint Planning Commission, a body established by the Canadian Association for Adult Education for exchange of information and co-ordination of plans for adult education in Canada.

Radio Programs.—*Citizens' Forum* is a round-table program on which a panel of experts discuss important issues of the day. It is arranged jointly by the Canadian Association for Adult Education and the CBC. Its French counterpart, *Les Idées en Marche*, is planned in co-operation with La Société Canadienne d'Education des Adultes. A similar type of program, but one prepared specially for rural listeners, is *National Farm Radio Forum*, arranged in co-operation with the Canadian Federation of Agriculture and the Canadian Association for Adult Education. All these forum programs are heard by organized listening groups, which continue the discussion of the topic at the conclusion of the broadcast.

For the past three summers the evening sessions of the Couchiching Conference have been broadcast. This week-long conference, organized jointly with the Canadian Institute on Public Affairs, examines Canadian and international affairs in open meetings and group discussions.

Other programs of an educational nature are *Cross Section*, a series of drama documentaries dealing with economic and social questions; various dramatized series in the field of human relations and mental health; and *Trans-Canada Matinée*, a daily afternoon program including informative talks and commentaries designed specially for the woman in the home. This latter program was one of six CBC programs that captured a First Award at the 1954 Exhibition of Educational Radio and Television Programs at Columbus, Ohio. On the French Network, *Forum de Radio-Parents* presents broadcasts designed to help parents on the subject of child care, and general questions sent in by parents are answered by psychologists in the series *Le Courrier de Radio-Parents*. For women listeners the day time program *Femina* is presented twice weekly.

In the Province of Quebec the CBC's French network broadcasts *Radio-Colège*, a series of weekly programs dealing especially with fine arts, music, literature, theatrical arts, sciences, religion and philosophy. These broadcasts are not designed for classroom use, being of a more adult nature than those on the English-language networks and scheduled, in the main, for other than school hours.

In addition talks on a wide range of subjects including international affairs, Canadian history and community activities are broadcast regularly over the various networks.

Television.—Organized in co-operation with the Universities of Toronto and Montreal and McGill University, the program *Exploring Minds* presents, in panel or lecture form, examples of the work of the modern university. On *This Week* the important world news of the preceding week is discussed by a panel of experts. *Fighting Words* is a program on which guest experts in the fields of arts and sciences discuss controversial quotations sent in by viewers. A daily program—*Living*—presents information of interest to consumers on a wide variety of commodities and services.

Section 4.—Library Services

The National Library.—The National Library of Canada, authorized by the National Library Act of June 18, 1952 (1 Elizabeth II, c. 330), came into existence formally on Jan. 1, 1953. The work formerly carried on by the Bibliographic Centre and the staff of the Centre were then absorbed by the National Library, which came under the administration of the Secretary of State.

The Act provides for the establishment of an Advisory Council consisting of 15 members, including at least one representative from each of the ten provinces; the appointment of a National Librarian, an Assistant Librarian and other personnel. Duties of the National Librarian include the establishment of a National Union Catalogue listing the books in every important collection in Canada; the purchasing of book stock; and the publication of a National Bibliography listing books published in Canada, written by Canadians, or of special interest to Canadians. The Act requires two copies of each book published in Canada to be supplied to the National Librarian within one month of the date of publication; one copy of expensive books must be deposited.

The site has been selected and working plans are being prepared for the National Library building at Ottawa. The acquisition of book stock is limited until permanent quarters are available but activities in other departments of the Library reflect noteworthy progress. The coverage of *Canadiana*, a bilingual monthly publication listing new Canadian publications, has been expanded to include those issued by all provincial governments. By Dec. 31, 1954 individual library catalogues representing about 5,963,000 volumes in 91 libraries had been microfilmed for the National Union Catalogue. In addition the library has assumed the duty of receiving, registering and acknowledging all books deposited under the terms of the Copyright Amendment Act.

Public Libraries.—Public library service in Canada includes main libraries and their branches in metropolitan areas—sometimes augmented by bookmobile service to outlying districts—small association libraries in villages and hamlets, regional service on a county or wider basis, and the use of boats and the mails to supply remote rural areas. Through these facilities, 75 p.c. to 80 p.c. of the population receive library service.

The current DBS Survey of Libraries presents statistics for the year 1953. Operations of the 766 public libraries surveyed are given in Table 1. The 1954 DBS publication *Free Urban and Regional Public Libraries* contains data on all free libraries in urban areas of 10,000 or over, all regional libraries and an estimate of volumes, circulation and expenditures.

1.—Summary Statistics of Public Libraries by Province 1953

Province	Volumes	Circulation	Borrowers	Current Expenditure	Full Time Staff
	No.	No.	No.	\$	No.
Newfoundland.....	179,362	499,304	25,385	122,353	23
Prince Edward Island.....	85,995	304,008	13,500	47,390	11
Nova Scotia.....	196,086	931,077	73,572	224,015	46
New Brunswick.....	137,147	218,574	27,711	59,960	16
Quebec.....	1,101,286	1,830,825	93,440	697,739	136
Ontario.....	4,911,782	18,811,520	991,174	4,503,187	964
Manitoba.....	195,320	988,343	44,519	259,979	64
Saskatchewan.....	340,045	1,048,085	60,117	291,039	59
Alberta.....	505,427	2,022,310	119,493	467,740	101
British Columbia.....	752,925	4,292,684	223,031	1,138,063	250
Totals.....	8,405,375	30,946,730	1,671,942	7,811,465	1,670

Of the 766 libraries reporting in 1953, 92 were in cities of 10,000 population or over. They employed 78 p.c. of the total full time staff members and accounted for over 87 p.c. of the total expenditures. Median salaries in city libraries varied with the size of the city as follows:—

Staff	Cities with Populations of—		
	10,000- 24,999	25,000- 99,999	100,000 or over
	\$	\$	\$
Chief librarian.....	3,250	4,344	5,273
Head of branch or division.....	2,667	3,306	3,579
Other librarians.....	2,194	2,814	2,497
Other classifications.....	1,667	2,554	2,434
Clerical staff.....	1,808	1,917	2,108

In addition to the primary task of circulating reading material, public libraries undertake varied special services. City libraries in 1953 lent 89,296 films and 108,225 records, gave 656 concerts, presented 336 radio and drama shows and had 4,265 public film showings with total attendance of over 4,000,000. About 4,860 story hours for children were presented, usually on Saturday mornings. In addition 357,217 requests for information were answered.

Regional Library Service.—Regional library service, or an adaptation thereof, now functions in Newfoundland, Prince Edward Island, Nova Scotia, Ontario, Saskatchewan, Alberta and British Columbia. In addition a Director of Regional Libraries was appointed in January 1954 in New Brunswick, preparatory to the establishment of a regional library system in that Province, and preliminary surveys are being undertaken in Manitoba. Summary statistics for the regional libraries in operation are given in Table 2.

2.—Summary Statistics of Libraries Organized for Regional Collaboration 1954

Regional Organization	Volumes	Circulation	Expenditure	
			Book Stock	Total

¹ Includes figures for Newfoundland Travelling Library. 1954 only.² Estimated.³ September to December

Academic Libraries.—The 1953 Survey of Libraries covered 263 academic libraries which contained about 7,630,000 volumes, employed 545 full time and 615 part time personnel. Of all the employees 290 were trained in library science.

Government Libraries.—The 102 Federal Government libraries covered by the 1953 Survey reported 2,067,430 volumes and the 99 provincial government libraries reported 1,389,516 volumes. The federal libraries employed 345 full time staff members and the provincial libraries 162.

Business, Professional and Technical Libraries.—The 131 libraries operated by business, professional and technical societies and establishments in 1953 reported 774,629 volumes in stock. Two-thirds of these libraries reported full time staff numbering 253 persons.

Section 5.—Canada and the United Nations Educational, Scientific and Cultural Organization

Liaison between governmental and voluntary organizations in Canada and the United Nations Educational, Scientific and Cultural Organization is the responsibility of the Department of External Affairs. Canadian participation in UNESCO includes representation at the Sessions of the General Conference; the supplying of advice and

information on Canadian matters to the Secretariat of UNESCO; co-operation in projects undertaken by the Organization; the sending of Canadian representatives to international seminars sponsored by UNESCO; the administration of UNESCO fellowships and scholarships tenable in this country; and the promotion of UNESCO publications.

General Conferences of UNESCO are now held every two years. At these conferences progress during the preceding years is reviewed and a program for the next two years is determined. Fundamental education and technical assistance are regarded as the most important parts of the UNESCO program. In the scientific field, research toward improving the living conditions of mankind is emphasized and encouragement is given to projects designed to improve scientific liaison. UNESCO also endeavours to promote cultural exchanges, improve the means of communication among the peoples of the world and stimulate the exchange of persons between nations.

The total UNESCO budget for the financial period 1955-56 is \$21,617,830 and Canada's share is \$554,000 or 2.56 p.c. of the assessment level.

More than 100 voluntary organizations, official agencies and departments co-operate with the Department of External Affairs in arranging Canadian participation in the UNESCO program. Canadian support of UNESCO is considered to be an integral part of the country's support of the United Nations program of peace through international understanding.

PART III.—SCIENTIFIC AND INDUSTRIAL RESEARCH

Section 1.—The National Research Council*

Organized research in Canada on a national basis dates from 1916 when the Government of Canada established the Honorary Advisory Council for Scientific and Industrial Research under a Committee of the Privy Council. Provision was made for the planning and integration of research work, organization of co-operative investigations, postgraduate training of research workers, and prosecution of research through grants-in-aid to university professors. This was the basis of the Council's work from 1916 to 1924.

A Special Committee of Parliament, appointed to study a recommendation for establishing national laboratories, endorsed the proposal and the Research Council Act was revised by Parliament in 1924. Temporary laboratories were secured and research on utilization of magnesian limestones for refractories was carried out so successfully that a wartime industry, established during World War I, was re-established on a large scale. As a result, in 1929-30 the Government provided funds for new laboratories.

The National Research Building on Sussex Street, Ottawa, was opened in 1932 and in 1939 construction was begun of the aerodynamics building on a 130 acre site adjacent to the Rockcliffe Airport of the Royal Canadian Air Force. Later, other buildings were erected on this site, including woodworking and metalworking shops and separate laboratories for research on engines, gas and oil, hydraulics and structures. These facilities have since been enlarged and extended and new buildings have been provided for engineering, low temperature studies and high speed aerodynamics. In 1952 a cosmic ray laboratory, a thermodynamics building and a large structure to house the Division of Applied Chemistry were added and in 1953 a modern laboratory was constructed, in one of the Montreal Road service tunnels, for the exact measurement of surveyors' tapes. That year also saw the completion of the large and beautiful Building Research Centre, and the construction, on a new 250 acre site on the opposite side of the road, of new headquarters for the Division of Radio and Electrical Engineering. An underpass connects the two areas. The flight research section of the Division of Mechanical Engineering was transferred from its temporary quarters on the Arnprior Aerodrome to permanent quarters at Uplands Airport near Ottawa.

* Prepared by M. W. Thistle, Chief, Public Relations Branch, National Research Council, Ottawa.

A Prairie Regional Laboratory, constructed on the campus of the University of Saskatchewan, has been in operation since June 1948. A Maritime Regional Laboratory, built on Dalhousie University campus at Halifax, N.S., was opened in June 1952. The co-operation of a large oil company has made it possible for the Division of Building Research to establish a Permafrost Research Station at Norman Wells, N.W.T. This is one of the most northerly building research establishments in the world.

The National Research Council consists of the President, two Vice-Presidents (Scientific), one Vice-President (Administration) and 17 other members, each of the latter group being appointed for a term of three years and chosen to represent industry, labour or research in one of the basic natural sciences. Many of the members are drawn from the science departments of Canadian universities.

The Council's scientific and engineering activities are organized in nine Divisions and two regional laboratories, each with its own Director. Five laboratory Divisions are concerned with fundamental and applied studies in the natural sciences: applied biology, pure and applied chemistry, and pure and applied physics. Three others are devoted chiefly to engineering work—building research, radio and electrical engineering, and mechanical engineering which includes aeronautics and hydraulics. The Division of Medical Research has no laboratories of its own but awards grants-in-aid and fellowships tenable chiefly in the medical schools of Canadian universities.

In addition to its basic research functions, the Council operates an Information Service with a field staff of technical officers who assist the smaller industries across Canada by bringing their operating problems to the attention of the Council. Through a trained research staff, using the extensive library facilities available to the Council, it is usually possible to provide the required information at very short notice.

The Council aids industry in two other important ways. A free and constant flow of personnel and information is maintained between the Council laboratories and industrial laboratories, the aim being to have Canadian industry use the Council's laboratories just as the units of a large company use their own laboratories as sources of scientific information and assistance. The Council also undertakes for any firm, under contract, research problems that cannot be solved by private consulting and testing laboratories and, in return, obtains assistance from many companies. The Council has long standing and intimate contacts of this co-operative kind with many Canadian industries in various fields.

Associate committees were established by the National Research Council early in its history and have been continued to date. Throughout the years hundreds of specialists have accepted invitations from the Council to serve on committees and have brought their knowledge and experience to bear on the solution of research problems put before them. Members of committees give their time and effort to these special studies without charge, and their assistance is a source of great strength to the Council.

Assisted research grants have been made by the Council since its inception in 1916. These awards are given to heads of university science departments to purchase needed equipment and to employ junior helpers, usually students. Aid of this kind has been of considerable assistance in enabling the universities to put into operation the excellent graduate schools that now exist in Canada. In 1954-55 more than \$2,500,000 was provided out of Council funds for basic research at Canadian universities.

Scholarships and grants in aid of research are awarded annually by the National Research Council. Scholarships awarded in science and engineering include Bursaries, Studentships and Fellowships which have values of \$800, \$1,100 and \$1,400 respectively for the academic year, to which a summer supplement of \$800 may be added. In addition Special Scholarships valued at \$1,900 a year and Postdoctorate Overseas Fellowships at \$2,500 are offered. The Council also awards two classes of Graduate Medical Research Fellowships, which have values of \$1,800 to \$3,500 for awards involving graduate training and up to \$5,000 for senior awards in advanced research. Graduate Dental Research Fellowships of similar value are also made. About 270 of these different awards were made for 1954-55, totalling in value over \$380,000.

In recent years (since 1948), the National Research Council has opened its doors to a limited number of postdoctorate Fellows who have been carefully selected on the basis of merit from the universities of the world. About 100 of these keen young scientists are now working in the laboratories, most of them in chemistry, physics or applied biology. They are appointed for one year only but may be retained for a second year if conditions warrant. This flow of young men through the laboratories has a stimulating effect; it creates a sort of university atmosphere that is both fresh and invigorating and keeps the Council young.

Principal Activities in 1954-55.—The activities of the *Division of Applied Biology* range from applied studies on food storage and transport to more fundamental work on the metabolism and chemical composition of living organisms.

The maintenance of high humidity in cold storage rooms has been studied in an effort to reduce surface drying of foodstuffs. In an experimental room, relative humidities approaching saturation have been obtained by cooling the room indirectly through a jacket of cold air. The design features are being considered commercially.

The gray discoloration of processed pork has been related to a light-induced oxidation of the meat pigments: recent studies have shown that this change occurs much more rapidly in the muscle pigment than in the blood pigment. Because of the growing interest in medical and related fields, frozen storage of living cells and small organisms is under investigation. Studies on blood plasma albumins have shown that the serum albumin molecule consists of at least two sub-units rather than the single chain structure suggested by other workers. Work on the production of citric acid by submerged fermentation of beet-sugar molasses has shown that the laboratory procedure is feasible on a larger scale. The carbohydrate composition of various grains, seaweeds, and marine algæ continues to receive attention. Statistical studies have included standardization of laboratory techniques for detecting slight variations in taste of food products.

In the Maritime Regional Laboratory at Halifax the scientific interests of the staff have broadened considerably during the year. A pilot plant dryer has been designed and constructed to permit studies of optimum conditions for drying such materials as seaweeds. The nutritional value of dried seaweed meals compared favourably with casein; dulce and rockweed meals were superior to gelatin or soybean in rate of regeneration of liver protein. A method has been developed to determine the presence of carrageenin in seaweeds. The cause of pitch formation in pulp and paper mills is under study. Other subjects of investigation are the quality of hard cider, the cause of flakiness of cod fillets, quality changes in stored potatoes, and various aspects of metallurgical reactions at high temperatures as encountered in manufacturing iron and steel.

The Prairie Regional Laboratory is continuing work on the utilization of agricultural materials. A method for producing lysine by fermentation is being investigated; if this is successful, it should increase the use of wheat for animal feeding. A toxic factor in rapeseed meal is being studied to determine the cause and to find a method of overcoming this defect.

The current trend toward the production of hardboard, or 'synthetic lumber', as a major building material of the future, has resulted in emphasis being shifted from the field of insulating or fibre board to hardboard. In studies on water resistance in fibre boards it has been found that most pulps can be sized by treatment with metallic salts at the appropriate degree of acidity. The metallic salts react with native constituents in straw or wood pulps. A patent for this process has been applied for.

In a study of elevator dust explosions it was found that the most important factor was the size of the dust particles. Only those fractions that pass through a 150 mesh screen are potentially dangerous for initiation of explosions. Dust separation and removal systems are being designed and installed by commercial equipment engineers.

Other projects include studies on the properties and mechanism of reactions of starches, sugars, proteins, fats and oils, and other plant constituents; on the physiology, biochemistry, and enzymology of living plants and micro-organisms; on the mechanism of fermentation processes; and on the design and operation of fermentation equipment.

In the *Division of Applied Chemistry* special attention has been given to corrosion in automatic cooling systems by ethylene glycol solutions, the corrosion of iron in aqueous solutions, and various means of reducing these effects. In the textile section studies on laundering, dry cleaning, and preservation are being emphasized, this work leading to a much better understanding of detergent action.

A major function of the Division is the development of chemical processes that will utilize Canada's natural resources. During the year, petroleum products have received the greatest attention, most of it on a pilot plant scale.

A new technique has been developed for contacting solids and fluids, a method showing considerable promise for industrial use. In the rubber laboratory researches have been directed towards the use of lignin as a reinforcing agent for rubber. Improvements have been made in an adhesive based on cyclized rubber and suitable for bonding rubber to metal and an adhesive formulation suitable for use at elevated temperatures has been developed.

The *Division of Pure Chemistry* is concerned with investigations in the major chemical fields—organic, physical, inorganic and colloid. Most of the work is fundamental—trying to find out why certain chemical reactions behave as they do, and determining the ultimate spatial structure of unknown compounds.

The *Division of Applied Physics* divides its effort between research on problems directly related to the development of Canada, and the establishment and maintenance of fundamental physical standards that form the basis of so many industrial operations. The first category includes a close and successful co-operative program with the Canadian Pulp and Paper Association on noise abatement in the paper industry; the provision of a common dosage standard for X-radiation at cancer clinics throughout Canada, and a significant contribution to Canadian mapping methods.

Activity in the standards field has led to the completion of a mutual inductance on which the Canadian ohm will be based; a highly precise temperature scale through most of the international range; the reproduction of the standard of brightness through the brightness of melting platinum; and a considerable contribution to the preliminary work necessary for basing the metre on a wavelength of light instead of on a physical prototype.

In the *Division of Pure Physics*, work is being pursued on various fundamental problems that do not have an immediate application, but they advance the frontiers of knowledge and supply the basis for further progress in the applied fields. Work is under way on cosmic rays, solid state physics, spectroscopy, X-ray diffraction, and theoretical physics. Important contributions have been made in each of these fields.

In the *Division of Medical Research*, whose only function is to make grants, eight senior and sixteen ordinary research Fellowships were granted in 1954. Ten of these were first awards. Since 1946, 244 Fellowships have been taken up by 148 graduates. One-half of these Fellows are now fully trained and of these, 70 are known to be attached to faculties of medicine in Canadian universities, engaged in teaching. Twenty-six have full time appointments in which they direct or actively participate in research. The Fellowship program has borne good fruit.

Throughout the year, the *Division of Building Research* steadily developed its service to the construction industry of Canada. Laboratory research, as might be expected, covers the whole range of building materials from bricks and mortar to modern plastics. A project of unusual interest has been the continuation of the joint study of conductive flooring for hospital operating rooms. Co-operation with the Central Mortgage and Housing Corporation included not only service with unusual technical operating problems, but steady progress towards improved technical housing standards and designs, consistent with every practicable reduction in true costs.

A completely revised National Building Code was issued in June 1954 after more than four years of work by over 200 voluntary committee workers operating under the guidance of the Associate Committee on the National Building Code. All technical and secretarial work was done in the Division.

Field activities include studies on fires, soil problems on the new railway from Sept-Îles to the Quebec-Labrador iron ore deposits, soil freezing problems in most of the provinces, and permafrost research in connection with the new site for the town of Aklavik. In co-operation with the Meteorological Division of the Department of Transport the first Climatological Atlas of Canada was made available during 1954.

Most of the activities of the *Division of Mechanical Engineering* were again devoted to defence projects, but work in hydraulics, resulting primarily from the St. Lawrence Seaway development, increased sharply and the volume of work of interest to industry showed a steady growth. The demand for wind tunnel testing showed a significant increase during the year. In addition to development tests of new military aircraft, the low speed tunnel has also been used for investigating wind flow over the open bridge of a naval vessel, the effect of ice on the characteristics of a thin delta wing, and the stability of projectiles. The supersonic tunnels have been engaged on studies of different aircraft configurations aimed at reducing the drag in trimmed flight at supersonic speed.

The first flight of a reheat system in Canada was made during the year. In bench tests a part of the reheat fuel is injected before the turbine, thus cooling the turbine blades in addition to boosting the thrust. Problems include ignition, flame stabilization and screeching combustion.

In icing research a fully automatic system of electrothermal de-icing of aircraft has been developed. Current work is concerned with the icing of helicopters.

In the *Division of Radio and Electrical Engineering*, approximately one-half of the work in 1954-55 consisted of defence projects. The remainder of the program included problems in electrical engineering, electronics and radio physics, with emphasis on applications of interest to Canadian industry.

Work during the year included a microwave position-fixing system, remote control of fog alarm stations, merchant marine radar, assistance to the Canadian Wildlife Service, high voltage including the problem of radio interference from extra high voltage transmission lines, electronic detection of flaws in paper, the explosion hazard of static electricity generated by grain handling, transistors, vacuum tubes, microwave communication far beyond the horizon, antennas, radio astronomy, electronic music, high frequency standards, a forestry communication system, and electromedical research.

The administration of the foregoing laboratories has been placed on an entirely separate basis and exists only to serve the scientist. These service groups include the *Division of Administration* plus Central Workshops, the Library, the Patents Section, Canadian Patents and Development Limited (*see p. 117*), Plant Engineering Services, Public Relations Branch, Liaison Offices at Ottawa, London and Washington, and a Technical Information Service which assists Canadian industry by furnishing scientific and technical data on industrial problems.

Section 2.—Research in the Atomic Field*

Atomic Energy of Canada Limited (AECL), a government owned Crown company, operates Canada's main atomic energy centre near the town of Chalk River, Ont., 130 miles west-northwest of Ottawa. The company has a seven man Board of Directors that includes representatives of private industry, public and private power companies, and the universities, and is engaged in four main activities as follows: (1) the development of technology for economic atomic power; (2) fundamental scientific research in the atomic energy field; (3) operation of nuclear reactors and separation of nuclear fuels (plutonium and uranium-233); (4) production of radioactive isotopes and associated equipment, such as Cobalt-60 Beam Therapy Units for the treatment of cancer.

* Prepared by Clyde Kennedy, Public Relations Officer, Atomic Energy of Canada Limited, Chalk River, Ont.

There are three reactors at the Chalk River Project of AECL—ZEEP (Zero Energy Experimental Pile), NRX (National Research X-metal or X-perimental) and NRU (National Research Universal)—and the company is collaborating with the Canadian General Electric Company Limited and The Hydro-Electric Power Commission of Ontario (HEPC) in the building of an experimental atomic power station, to be known as NPD (Nuclear Power Demonstration), near Des Joachims, 12 miles up the Ottawa River from the Chalk River plant. All of these reactors use heavy water for a moderator.

The decision to build NPD followed a power reactor feasibility study, started late in 1953 and carried out by engineers of AECL, HEPC, the Montreal Engineering Company Limited, the Shawinigan Water Power Company, the British Columbia Electric Company Limited, and the Brazilian Traction, Light and Power Company Limited. The power reactor is expected to generate 20,000 kw. of electricity.

While the building of NPD proceeds, a preliminary design study for a larger atomic power station with a projected electrical output of 100,000 kw. is being carried out at Chalk River, and engineers of several utilities across Canada are participating in the study.

Nuclear Power Role Forecast.—A forecast of the likely role of nuclear power in Canada was presented to the International Conference on the Peaceful Uses of Atomic Energy, Geneva, Aug. 8 to 20, 1955 in a paper* by Dr. W. B. Lewis and Dr. John Davis. These authorities forecast that by 1980 nuclear power plants may account for as much as 10 p.c. to 15 p.c. of the total electrical generating capacity in Canada. Although by that year water power will still be the principal source of electrical energy in this country, thermal generation will have risen from the relatively minor proportions of a few years ago to at least 30 p.c. of installed capacity. One-third to one-half of this thermal generation will be by nuclear plants despite the fact that Canada has large reserves of petroleum and natural gas and an abundance of coal that can be strip mined in certain regions.

Costs of conventionally produced electrical power are expected to rise despite significant improvements in long distance transmission and further advances in the efficiency of central electric stations burning conventional fuels. At the least, nuclear energy will set a ceiling on power costs in power-short regions of the country and will reduce the wide discrepancies in the price of electricity which now exist between one Canadian power consuming region and another, for the most attractive feature of nuclear power is its low fuel costs. These may make the economics of future atomic energy plants resemble more closely those of Canada's existing hydroelectric installations rather than those of steam plants burning coal or petroleum.

Nuclear energy will not be competitive anywhere in Canada until its price has fallen below 8 mills per kilowatt-hour. At 7 mills it might be able to compete with hydro-electric or with coal fired steam power but demands for nuclear power at this price would be limited. The highly developed power-consuming region of southern Ontario, where imported coal will soon be the only alternative to hydro power, could absorb large blocks of power at 6 mills without creating even a temporary surplus of generating capacity. Various engineering and economic studies under way at Chalk River suggest that nuclear plants capable of such performance will be under construction within the next 10 years.

The forecasters point out that the average annual rate of growth of total demand for electrical power in Canada is now about 6 p.c. a year and consumption can be expected to increase threefold to fourfold or more during the next 25 years. Furthermore domestic supplies of oil and natural gas are emerging as deterrents to the use of electrical power for steam generating and other heating purposes. Also if inexpensive nuclear power becomes available in from 20 to 30 years time, a large part of Canada's established demand for new increase in power would disappear, for the tendency would then be to locate certain heavy power-using industries, such as the refining of aluminum, close to the principal industrial

* W. B. Lewis, Vice-President, Research and Development, Atomic Energy of Canada Limited, Chalk River, Ont., and J. Davis, Economics Branch, Department of Trade and Commerce, Ottawa, Ont.: *An Economic Forecast of the Role of Nuclear Power in Canada.*

markets of the world. An increasing amount of power will be required however by the need to increase productivity to meet the demands of Canada's increasing population. Consequently, though the annual rate of growth of consumption may decline from its present level of 6 p.c. to about 4.5 p.c. in the 1970's, annual installations varying between 1,000,000 kw. and 2,000,000 kw. will still be required throughout the 1960's and 1970's. If this prospective revolution in the generation of thermal power from nuclear energy takes place it will have important effects on many sectors of Canada's economy, notably on the chemical industry and capital investment and construction requirements. Though the supply of uranium for nuclear fuel can be met from existing sources of supply the need for heavy water for Canada's nuclear plants, according to the forecast developments, would need to be several times present production capacity.

If by 1981 there is an installed nuclear power station capacity of from 4,000,000 kw. to 7,000,000 kw. then the material needs might be: an inventory of 2,600 to 4,600 tons of natural uranium, an annual make-up of 180 to 200 tons of natural uranium (to replace the uranium burned), and an inventory of from 4,000 to 7,000 tons of heavy water. Cost of producing this natural uranium for domestic consumption apparently would run into tens of millions of dollars a year. Even if new methods are discovered for the manufacture of heavy water at appreciably lower costs, expenditures on this might reach an annual level 25 years hence of from \$40,000,000 to \$50,000,000. Outstripping these expenditures would be the outlays on generating plant, machinery and equipment—capital investments that might reach into the \$100,000,000 a year category by 1980.

These are large figures but they are not far out of line with the performance of Canada's electric power industry in recent years. The annual outlay by utilities for generating plant and equipment is at present about \$250,000,000. Twenty years from now their annual capital investments on facilities of all types may be closer to the \$500,000,000 mark. Construction, equipment and supply of a number of base-load-type nuclear power plants, costing around \$150,000,000 annually is therefore unlikely to be impeded by a lack of financial resources, according to the Geneva report.

Advisory Committee on Atomic Power Development.—To ensure that the various publicly and privately owned utilities are kept fully informed of the progress being made, the Government set up in 1954 an Advisory Committee on Atomic Power Development on which the various power producers throughout the country are represented. The committee, which meets periodically at Chalk River, studies the research results obtained at that centre, receives complete information on the NPD station, and assists in evaluating the economic importance of atomic power in various regions of the country.

In 1955 an "industrial assistance office" was set up at Chalk River to create as wide as possible an interest on the part of private companies in the possible applications of atomic energy in general and of atomic power in particular.

Development of Canada's Atomic Energy Program.—As at Mar. 31, 1956 the approximate total expenditure on the Canadian atomic energy program was \$160,000,000. An estimated further expenditure of about \$100,000,000 will be required to carry out the program planned for the next four years.

The program had its beginning in 1942 when it was decided to set up a Canadian-United Kingdom project in Canada, under the administrative control of the National Research Council of Canada. British, French and other European scientists doing nuclear research moved to North America (mainly to the United States and Canada) early in World War II to work on an atomic weapon—the possibility of which became evident when O. Hahn and S. Strassman in Berlin, Germany, announced the first recognition of nuclear fission in 1939.

The United States project used the more readily available graphite to moderate its reactors and the project in Canada was assigned the task of trying heavy water as a moderator so that all possible routes to the production of plutonium for bombs would be tried.

In 1944 the Canadian-United Kingdom team moved from the University of Montreal, where preliminary studies had been carried out, to the site which was established on the Ottawa River, about five miles from the town of Chalk River.

On September 5, 1945 ZEEP went into operation. It operated at a mere 10 watts but it made possible a study of the value of a heavy water natural uranium system and it has continued to be useful for studies of fuel rod arrangements. Two years later on July 22, 1947 the NRX reactor went into operation. It was then, and so remained for several years, the most powerful research reactor in the world. The NRX reactor still plays a leading role by (1) making possible important experiments relating to the development of atomic power, (2) enabling the fundamental properties of atoms and nuclei to be determined, and (3) producing radioactive isotopes of high specific activity (i.e., the relation of the amount of radiation to a given weight of material). Both the United States and the United Kingdom are, like AECL, using NRX for atomic power studies. Since its reconstruction following a breakdown on Dec. 12, 1952 this reactor has operated at a power output of 40,000 kw. (a measure of the heat produced)—one-third higher power than before the breakdown.

In 1946 the United Kingdom established its own atomic energy program and in the same year the Atomic Energy Control Act was passed in Canada "to make provision for the control and supervision of the development, application and use of atomic energy." This Act created the Atomic Energy Control Board which was given three main powers: (1) to conduct research and production operations, either directly or through other agencies reporting to it; (2) to regulate the production and application of materials relating to atomic energy, particularly fissionable materials; and (3) to make and administer security regulations required by the Canadian atomic energy program.

The Chalk River project was operated on behalf of the Atomic Energy Control Board by the National Research Council until 1952 when a Crown corporation, Atomic Energy of Canada Limited, was established to operate the project on behalf of the Board. A 1954 amendment to the Atomic Energy Control Act requires AECL to report directly to the Cabinet Minister who is Chairman of the Committee of the Privy Council on Scientific and Industrial Research. The Atomic Energy Control Board continues to report to the same Minister and its functions remain unchanged.

The next stage in the Canadian program, following the creation of a separate United Kingdom program, consisted mainly of carrying on fundamental research at Chalk River, using the facilities of the two natural uranium heavy-water reactors. The need for a source of higher neutron flux for fundamental research and for engineering studies resulted in the decision in 1951 to build another natural uranium heavy-water reactor known as NRU. This reactor is expected to have a neutron flux four times that of NRX and a heat output of 200,000 kw., five times that of NRX. The NRU reactor has three main functions: (1) the production of significant quantities of plutonium; (2) the provision of advanced experimental facilities for fundamental research and for the testing of power station fuel-coolant systems; and (3) the production of radioactive isotopes of high specific activity, particularly Cobalt-60 which is used in the treatment of cancer.

The Chalk River Project.—The principal function of this Project is to carry out fundamental research and preliminary engineering development. The Project provides the data which utilities and manufacturers need for a nuclear power program. The work is carried out by an Administration and Operations group and a Research and Development group. The former is responsible for general administration, the operation of the nuclear reactors and associated chemical process plants, the construction and maintenance of buildings, the provision of steam and auxiliary power for the project, and the correlation of the experience of the operating branches with the results obtained by the research branches to produce engineering information for major projects handled by outside organizations.

The activities of the Research and Development group which cover a wide field of fundamental and applied research in physics, chemistry, metallurgy, and biology, are carried out by four divisions: Reactor Research and Development, Chemistry and

Metallurgy, Physics, Biology. These divisions conduct short term and long term investigations—the short term to provide the basic information required to design and operate the first Canadian power reactors. A wide variety of possible reactor systems make it necessary to conduct extensive investigations, both mathematical and experimental, to determine which are likely to be the most economic and efficient. The longer term work, though mainly the responsibility of physicists and biologists, also involves the chemistry of substances which have become important (or have come into existence) only since the development of atomic energy.

The Reactor Research and Development Division is engaged in experiments and calculations required for the design of nuclear reactors for atomic power stations. Control systems for such plants and for the Chalk River reactors are being studied. The ZEEP reactor has been in constant use in determining the reactive efficiency and other characteristics of various fuel element arrangements. Many fuel samples have been tested in the NRX reactor under conditions simulating those which will exist in power plants. These experiments are providing essential information on the behaviour and suitability of different physical forms of the fuel, or different kinds of cladding to prevent corrosion of the fuel, and of heat transfer characteristics.

The Chemistry and Metallurgy Division includes a number of research groups which are making a co-ordinated attack on the problems of the preparation and processing of reactor fuel. The division develops fuel elements for the NRX and NRU reactors and for power reactors. Much of the work is being done in collaboration with the Department of Mines and Technical Surveys.

In the Physics Division work has continued on the study of nuclear structure, using the experimental facilities of the NRX reactor and the particle accelerators, such as the 3,000,000 electron volt Van de Graaff Generator. To investigate atomic disintegrations produced by very energetic protons an apparatus has been assembled in a mobile laboratory and located at the Inter-University High Altitude Laboratory at Echo Lake, Colorado, U.S.A., where the proton component of cosmic rays is some ten times as frequent as at sea level.

The activities of the Biology Division include the control of radiation hazards, the development of decontamination methods, the study of uses of radioactive isotopes in biological research, and the investigation of the effects of radiation on living organisms.

Canada pioneered in the production of radioactive isotopes and the Chalk River project now produces a wide variety of isotopes for use in industry, agriculture and medicine. The high flux of NRX enabled AECL to produce relatively large quantities of Cobalt-60, with a high specific activity, for use in cancer therapy units. The combined production of NRX and NRU will be required to satisfy the demand from many countries for Canadian units.

The marketing of radioactive isotopes and associated equipment is handled by the Commercial Products Division of AECL with headquarters in Ottawa and about 1,200 shipments of various products were made during 1955. Cobalt-60 Beam Therapy Units have been installed in hospitals and other treatment centres in Canada, the United States, the United Kingdom, Switzerland, France, Italy and Brazil.

Section 3.—Other Scientific and Industrial Research Facilities

Aside from the work of the National Research Council and Atomic Energy of Canada Limited, Canadian research is carried on by various federal agencies, provincial organizations, universities and industries. Several provinces in Canada have established Provincial Research Councils to stimulate and support research on problems having special provincial significance. The universities of course form an extremely important part of the Canadian pattern of research. Much of their work is along fundamental lines but practical problems are not neglected, especially those of regional interest.

All three types of institutions—federal, provincial and university organizations—have an interest in problems of industrial significance: this is part of the current Canadian pattern of research. Though many Canadian industries now possess research facilities—some of them quite extensive—the main bulk of industrial research to date has been done under government auspices.

Thus the unique problems of the country, particularly its large area coupled with a small population, have led to a typically Canadian organization of research, of which a very strong associate committee system is perhaps the most distinctive feature.

Federal Institutions.—Although research by industrial concerns has been slow to develop in Canada, government research has expanded rapidly, at first because of the need for speeding up the production of raw materials, which were for many years the basis of Canada's export trade, and secondly because of the more recent interest in the processing of these raw materials and because of the necessity to meet the needs of national defence. Federal institutions involved in research include the Departments of Agriculture, Fisheries, Mines and Technical Surveys, National Defence, National Health and Welfare, Northern Affairs and National Resources, and Trade and Commerce; the National Research Council; and Crown corporations such as Atomic Energy of Canada Limited. A system of committees, with nationwide representation, eliminates unnecessary duplication of work from these national research organizations.

The scientific work of the Department of Agriculture is described at p. 395 of this volume, the work of the Defence Research Board in Chapter XXVIII (*see Index*), specialized work in scientific forest research in Chapter X, scientific services concerned with Canada's mineral resources conducted by the Department of Mines and Technical Surveys in Chapter XI, investigational work of the Department of Fisheries in Chapter XIII, the work of the National Research Council at pp. 371-375 and atomic research at pp. 375-379. The activities of the other federal institutions engaged in research are described briefly in the following paragraphs.

Department of National Health and Welfare.—The Department of National Health and Welfare supports both intramural and extramural research programs. Within the Department, the Food and Drug Directorate, Laboratory of Hygiene, Occupational Health Laboratory and various clinical services are engaged in scientific research in their respective fields. Special studies and surveys are conducted in social and medical economics by the Research Division. The extramural program consists of grants-in-aid of medical research at universities, hospitals and other research institutions from funds under the National Health Program. The Public Health Research Grant provides over \$500,000 per annum with allocations from the Mental Health, General Public Health, Tuberculosis, Child and Maternal Health and Crippled Children's Grants making up approximately \$1,250,000 additional funds. To co-ordinate medical research programs, meetings are held by representatives of the National Research Council, Defence Research Board, Department of Veterans Affairs, National Cancer Institute and the Research Advisory Committee of the Department of National Health and Welfare. These have provided for reasonably clear definition of the field of interest of each organization and have minimized uneconomical overlapping.

Department of Trade and Commerce.—Rapid development of grain production in Western Canada led to the passing, in 1912, of the Canada Grain Act. This Act is administered by a Board of Grain Commissioners responsible for control of the transportation, weighing, grading and warehousing of Canadian grain. The Board soon encountered problems that required scientific study and a Grain Research Laboratory was established at Winnipeg in 1913.

The Grain Research Laboratory is the main centre of research on the chemistry of Canadian grains. It is well staffed and equipped to provide the service required to help maintain and expand domestic and foreign markets for all types of grain. Each year the Laboratory provides certain information required by the Board for administering the

Canada Grain Act. The Laboratory collects and tests samples of various crops to obtain information on the current quality of all grains shipped during the crop year. Fundamental research is also undertaken; the program is directed towards increased understanding of what constitutes quality in cereal grains and towards improving the methods of assessing quality.

Canadian Patents and Development Limited.—Canadian Patents and Development Limited is a Crown corporation established in 1948. The primary purpose of the company is to make available to industry, through licensing arrangements, new processes and improvements in processes developed by the scientific workers of the National Research Council. The services of the company have also been made available to government departments and other agencies, and have been extended to Canadian universities. The company arranges to obtain patents of inventions originating in these agencies and handles all licensing matters for them. Any profits that the company may derive from its licensing arrangements are used for further research and development.

Provincial Organizations.—The fact that only a few provincial research organizations exist does not indicate a lack of interest in research by the provinces. Most provincial governments have university laboratories to consult, particularly about local industrial and agricultural problems. Agriculture is particularly well covered because of its great importance as an export industry; the network of Federal Department of Agriculture laboratories and Experimental Stations, together with agricultural colleges and provincial research councils, provides this industry with a very well developed research service.

Nova Scotia Research Foundation.—This body was created by the Government of Nova Scotia in 1946 to give its people additional scientific and technical assistance in finding new and better ways to utilize the resources of the forest, the sea, the farm, the mine and the process industries. To this end it seeks to correlate and further scientific work on local problems and available resources. It assists universities, colleges, research groups, industries, provincial and federal departments and individuals by loans of equipment, grants, scholarships, laboratory and summer assistants, library, cartographic, photogrammetric and translation services, and technical information. It has supported or collaborated in work on breeding new varieties of plants and root nodule bacteria; on antibiotics, poultry, blueberry culture, coal burning equipment, the constitution and underground gasification of coal, the non-destructive testing of mine equipment, the utilization of anhydrite, diatomite, fish waste, gypsum, seaweed, slag, slab wood and fertilizing materials. It has conducted geophysical, geological, seaweed, forest aphidae and forest ecology surveys and assisted studies on the nutrient cycles of lakes, on X-ray crystallography, and on pressures in underground strata. During the summer of 1955 87 people were engaged on 25 projects.

Saskatchewan Research Council.—The Saskatchewan Research Council was established in 1947 for "research and investigation in the physical sciences as they affect the economy of the Province of Saskatchewan, and such particular matters as may be brought to its attention from time to time by the Lieutenant-Governor in Council". The term "physical sciences" is given a broad interpretation to include biological sciences, agriculture and engineering. The Council encourages both basic and applied scientific research relating to the resources and economy of Saskatchewan, and works in close co-operation with government departments and the University of Saskatchewan. A technical information service is conducted with the assistance of the National Research Council of Canada.

Among the current projects supported by the Council are: fundamental studies of lignin and related compounds, beneficiation of uranium ores, application of carbon-14 dating, utilization of wheat starch, cultivation of safflower crop, studies in foundation research, preservation of foods by freezing, winter lubrication, movement of mineral components in podsollic soils, inheritance of coumarin in sweet clover, contamination of milk with antibiotics, biometric studies on Saskatchewan lakes, and geological and archæological research. The Council also supports graduate research scholarships.

Research Council of Alberta.—The Province of Alberta set up a Scientific and Industrial Research Council in 1921, the promotion of mineral development within the Province being the chief purpose leading to its establishment. The Council operates under an Act somewhat similar to that setting up the National Research Council and is financed by Provincial Government appropriations. The present program is directed to the application of basic and applied science toward the development of the natural resources of the Province. Investigations include studies on coal, the Athabasca oil sands, natural gas, geological research and surveys, soil surveys and irrigation research. The Council maintains a gasoline and oil testing laboratory and has a group of industrial engineers to provide scientific information to developing industry. The Council laboratories are located at the University of Alberta and include a new \$750,000 research laboratory and pilot plant which was provided by the Province of Alberta in 1955. The laboratories work in co-operation with the scientific departments of the University and the operations of the organization are controlled by a council of ten individuals representative of government, the University and industry. The various research projects are under the immediate supervision of advisory committees and the chairmen of these committees form the Technical Advisory Committee of the Council, the body responsible for the integration and operation of the scientific aspects of the program.

British Columbia Research Council.—The British Columbia Research Council, under the sponsorship of the B.C. Department of Trade and Industry, provides a scientific and engineering staff with laboratories at Vancouver, to help British Columbia industries solve their technical problems. Its objective is to enable even the smallest firms to make use of modern technical knowledge and research to improve their competitive position in Canadian and world markets. The Council provides three classes of service: (1) a free information service in collaboration with the National Research Council; (2) assistance to specific firms at cost where information cannot be supplied from existing knowledge; and (3) at the Council's expense, research on problems of general value to the industrial development of the Province.

The Ontario Research Foundation.—The Ontario Research Foundation was established in 1928, and is financed by an endowment fund composed of subscriptions from manufacturers, corporations, private individuals, and a grant from the Provincial Government on a dollar-for-dollar basis with the other contributions. The Foundation carries on research to assist agriculture and industry in developing the natural resources of the Province. A study has been made of the physiography and climate of southern Ontario and also of the parasites found in wildlife in this Province. Many investigations have been undertaken in the industrial field and the Foundation is well equipped to work in metallurgy, textiles, chemistry and biochemistry. The services of the Foundation are at the disposal of industry on a fee basis, and consultative services, testing, short trial studies and long term investigations have been undertaken for hundreds of firms. The work has resulted in better products and in more efficient processing. The Foundation administers a grant from the Provincial Government to support postgraduate scholarships and scientific research in the universities of Ontario.

The Banting Research Foundation.—The Banting Research Foundation supports the work of the Banting and Best Chair of Medical Research in the University of Toronto and aids medical research throughout Canada by making grants-in-aid to those who submit problems of sufficient medical interest to the Board of Trustees. The Board meets and makes grants generally three times a year, around June 1, Oct. 1 and Feb. 1. Five members of the Board of Trustees are appointed by the Board of Governors of the University of Toronto and the Alumni Association of the University of Toronto, and these five members appoint two other Trustees, then the seven members appoint an eighth Trustee.

The Rockefeller Foundation.—The Canadian activities of the Rockefeller Foundation include appropriations to various Canadian universities, institutions and organizations for research in certain limited fields in the natural and social sciences, in the humanities and in medicine and public health, and the financing of postdoctorate fellowships to individual Canadians for work in fields related to the Foundation's general program. Under the public health program aid is given for teaching in public health and nursing.

Medical Research.*—Support for medical research is provided by the Federal and Provincial Governments, by private foundations or corporations, by voluntary agencies which raise money by public subscription, and by universities and hospitals. From these sources there are available (a) research fellowships for training, (b) grants-in-aid for assistance in problems of a fundamental or clinical nature, (c) salaries for trained personnel, and (d) the necessary capital and running expenses for investigations which are of particular interest to government, hospital or pharmaceutical house.

The Department of National Health and the Department of National Defence maintain establishments in which research is done in well-equipped laboratories with highly trained personnel. The Department of Veterans Affairs encourages its staff to do research in its own hospitals; much of this concerns chronic illness, such as arthritis, atherosclerosis, metabolic and nutritional derangements.

Most of the fundamental medical problems are studied in medical schools through the system of grants-in-aid. Funds from the Federal Treasury are provided through the National Research Council, the Defence Research Board, and the Department of National Health. The National Research Council supports mainly research in the basic medical sciences—anatomy, physiology, biochemistry, pharmacology, bacteriology, pathology, and experimental surgery—but 20 p.c. of its grants are for clinical investigations. The Defence Research Board makes grants for studies in which it is particularly interested, such as shock, the preservation of blood and the use of blood substitutes, the effects of low temperatures and of radiation, etc. The Department of National Health and Welfare provides funds for research, available on the recommendation of provincial departments of health, in the following fields: public health research, tuberculosis control, child and maternal health, mental health, and general public health. It also gives assistance to the Canadian Arthritis and Rheumatism Society (which obtains its other support by public subscription) and to the Ontario Heart Foundation (which derives its other resources from the Ontario Provincial Government). In addition the Department of National Health and Welfare makes available to the provinces cancer grants, out of which the Provinces may supplement the funds for research which the National Cancer Institute receives from the Canadian Cancer Society. Thus the Department of National Health and Welfare is the Canadian agency which gives the greatest support to extramural research in medicine; its interest is primarily in those problems which have a direct bearing on the health of the nation rather than in fundamental research.

Universities receive funds for research also from provincial branches of the Canadian Cancer Society and from such government foundations as the Ontario Cancer Treatment and Research Foundation and the Alcoholism Research Foundation, from fraternal societies and clubs such as the Rotary Club, from the J. P. Bickell Foundation, the Atkinson Foundation, the Canadian Life Insurance Officers Association, the Muscular Dystrophy Associations of Canada, the Banting Research Foundation, the Multiple Sclerosis Society, pharmaceutical companies, etc.

With help from these diverse sources, active research programs are in progress in every one of the twelve Canadian medical schools. In certain of these there are special departments devoted to research, e.g., the Departments of Medical Research at the University of Toronto and at the University of Western Ontario, and the Department of Investigative Medicine at McGill University, but these departments contain graduate

* Prepared by Dr. G. H. Ettinger, Assistant Director, Division of Medical Research, National Research Council, Ottawa.

students who work to higher degrees. With few exceptions departments designed for undergraduate instruction are active in research; a majority provide graduate instruction as well, in which the students are maintained on research fellowships or grants.

Notable contributions to medical knowledge are made every year by Canadian scientists, but space permits the mention of only a few fields: studies on epilepsy at the Montreal Neurological Institute; functions and interrelations of areas in the brain and brain stem and studies in neurophysiology and neurochemistry at McGill University, the University of Ottawa and the University of Western Ontario; endocrine and metabolic studies at McGill University and the Universities of Montreal, Toronto, Western Ontario and Manitoba; anticoagulants at the University of Saskatchewan; atherosclerosis and hypertension at McGill and Queen's Universities and the Universities of Western Ontario and British Columbia; hypothermia at the University of Toronto; surgery of heart and blood-vessels at McGill University and the Universities of Toronto and Montreal, and the Montreal Institute of Cardiology; tuberculosis at Dalhousie University, the Institute of Microbiology, Montreal, and the Connaught Medical Research Laboratories, Toronto; mental health studies at the Department of Health, Nova Scotia, the Allan Memorial Institute at McGill University, the University of Toronto, Regina General Hospital and the University of British Columbia; virology, including poliomyelitis, at the Institute of Microbiology, Montreal, the Sick Children's Hospital, Toronto, and the Connaught Medical Research Laboratories; bacteriology, immunity and hypersensitivity at McGill University, the University of Montreal, Queen's University, the University of Western Ontario and the University of Toronto; cancer in all the medical schools.

At present there are more than 4,300 students enrolled in postgraduate courses in Canadian universities, not counting those in theology. Most of these receive some training in research, more than half of them in one or other of the fields of science.

Some idea of the relative importance of pure and applied science can be obtained from a study of problems undertaken by graduate students. In 1952, 64 p.c. of candidates selected problems in pure and applied science in the ratio of two to one, respectively; the remaining 36 p.c. were about evenly divided between the humanities and social sciences. Emphasis has always been largely on fundamental research reflecting a desire to know more about natural phenomena but with the realization that practical applications may follow. A wide variety of work is at present being undertaken in pure research in fields as divergent as pure mathematics, nuclear physics, electrical communication, isotopes, the cobalt bomb, and the functioning of glands and the brain, to mention but a few.

At the same time practical applications of research are being undertaken in most of these fields and many others. Practical research in the universities is not only influenced by the industrial life of the people around it but by problems associated with world and local conditions such as world wars, economic depressions and increased exploration of natural resources. It includes problems of general interest in such fields as medical research, community planning, industrial mining, meteorology, industrial research and others too numerous to mention; and local problems related to such industries as fishing on the coasts, mining in central Canada and agriculture in the Prairie Provinces. At present the greatest emphasis is found on primary agriculture, industry, mines, lands and forests and atomic energy.

Most of the research now being undertaken by the universities has been made possible through grants, scholarships and fellowships from the federal and provincial governments, foundations, industrial organizations and individuals. Some of these are available to university staff members, to complete specific projects; others are scholarships available to students who, by the terms of certain of the scholarships, must select a problem in a specified field such as pipeline problems, cellular chemistry, public health engineering or forest entomology.

A few units of the larger universities (medical laboratories for example) have paid their way through selling the products of their research. There is some indication that these will expand, as will concerted research undertaken by the university with other research organizations, business and industry, in such undertakings as continuing study of the atom, and installing and using electronic computers.

Connaught Medical Research Laboratories.—The Connaught Medical Research Laboratories, University of Toronto, were established for the advancement of preventive medicine and public health through research and through the preparation of biological and other products essential in prevention or treatment of certain diseases. The Laboratories render a medical public service to all the provinces of Canada and, to an extent, to countries abroad. This service was initiated when the preparation of diphtheria antitoxin was undertaken in the Department of Hygiene at the University in an effort to reduce the toll of deaths from diphtheria in Canada. At the same time the Department initiated investigations into this and other diseases. Since then, research activities have constantly expanded and today more than seventy studies are being conducted in the Laboratories.

The research program of the Laboratories concerns the broad field of preventive medicine. By including the study of certain animal diseases, particularly those which are transmissible to man, and through preparation of related products, the Laboratories are serving both the medical and veterinary professions.

The research projects are extensive and include studies of bacterial and virus diseases, investigations in immunology, epidemiology, physiology, biochemistry, and in other fields related to preventive medicine. These undertakings are maintained in part through the distribution of products, the furnishing of which constitutes an important public health service.

Important to the advancement of public health is the assistance rendered by the Laboratories in the postgraduate teaching of medical officers of health, nurses, dentists, veterinarians, and other professional personnel. From the inception of the Laboratories in 1914, members of the staff have been closely associated with postgraduate teaching in public health. In 1924, through the beneficence of the Rockefeller Foundation and with the co-operation of the Government of the Province of Ontario, the School of Hygiene was established. This provided greatly enlarged teaching facilities and also extended the participation of the Connaught Medical Research Laboratories in the work of training public health leaders.

On the University campus the College Division of the Connaught Medical Research Laboratories and the School of Hygiene share one building, permitting of joint use of research and laboratory facilities of the two institutions, and promoting a close and mutually advantageous relationship. Here also the production of insulin and other glandular products is undertaken.

On Spadina Crescent in Toronto, the Spadina Division of the Laboratories provides accommodation for much important work including the production of penicillin and research in the field of antibiotics. Additional facilities are provided near Toronto at the Dufferin Division and include a 145 acre farm property with modern laboratory buildings and quarters for animals.

Through the organization of the Western Division in the University of British Columbia the Connaught Medical Research Laboratories have shared in the development of an important program of research in preventive medicine on the Pacific Coast.

Thus for over forty years the Connaught Medical Research Laboratories, with the co-operation of the medical profession and the official public health authorities, have contributed in steadily increasing measure to the advancement of research and public health in Canada.

Industrial Research.—The industrial research picture in Canada is changing very rapidly. In the past, industry in general was largely unaware of the value of research to its own development and to that of the country, partly because many Canadian companies were subsidiaries of companies in the United Kingdom and the United States and partly because small companies found it impossible to finance their own research. The problem was accentuated by the vast size of the country, the absence of concentration of similar industries and the proximity to the relatively large research facilities of the United States.

However the recent emergence of Canada as a highly industrialized society, its entrance into multitudinous fields of production, the rapid growth of many large nationwide industries, the serving of a discriminating domestic market and the meeting of competition from abroad have had the effect of making Canadian manufacturing establishments research conscious and many of the larger ones now possess powerful research organizations. The fields covered by some of these industries are outlined in the following paragraphs.*

Aluminium Laboratories Limited.—Aluminium Laboratories Limited undertakes both fundamental and applied research. Its research laboratories are located at Arvida, Que., Kingston, Ont., and the head offices of the Company, including divisions to conduct geological exploration, general engineering and patent affairs, are at Montreal, Que. The Company also has research facilities at Banbury, England.

The laboratory at Arvida is devoted largely to research problems up to and including the production of metallic aluminium. Activities are organized in the following categories: ore dressing, pilot plant, chemical, electrometallurgical, analytical and engineering. At Kingston, the research is metallurgical in nature and its divisions include: metallurgical engineering, physics and physical metallurgy, chemical metallurgy, technical publications and a development division to bridge the gap between fundamental scientific research and commercial applications.

Ayerst, McKenna and Harrison Limited.—This industry has extensive research and development laboratories and carries on original investigations in the fields of vitamins, hormones, antibiotics, and chemotherapeutic agents. The chemical laboratories are well provided with the latest tools (ultra violet, infra red, microanalysis, etc.) required in following the synthesis of new compounds and the Company also maintains a fully equipped pharmacological laboratory where these substances are evaluated for their therapeutic effects. Studies related to antibiotics and new antibacterial agents are carried on in the microbiological division.

Canada Packers Limited.—Canada Packers maintains a large research and development laboratory where several research groups work in the various fields of interest to the Company. The Meat Group works on new products and on the improvement of methods of production. The Oil Group performs the same work in the edible oil field. The Development Group is interested in developing and improving manufacturing processes. The Analysis Research Group develops accurate, reliable and fast methods of analysis for the Company's control laboratories across the country. The Biochemical and Organic Groups concern themselves with the development of byproducts such as hormones, enzymes, and fine chemicals of pharmaceutical and industrial interest. Extensive pilot plant facilities are also available.

Canadian Industries (1954) Limited.—This establishment maintains a large and diversified Central Research Laboratory equipped to carry on research in the fields covered by the eight operating divisions of the Company. The work is concerned with improvement of present processes and pioneering investigations in fields of existing interest to the Company, utilization of Canadian raw materials and meeting the needs of basic industries in Canada. The laboratories are particularly well supplied with physical equipment for determining chemical properties and identities of materials and in the use of newer techniques of examination.

Canadian Breweries Limited.—The Research Division of this Company operates laboratories that conduct all the control, chemical and bacteriological analysis for four large brewing companies. Fundamental and development research in the field of malting and brewing is also carried on for these four companies and two additional ones. In all, fifty employees—thirteen on research, ten on bacteriology and sixteen on chemical analysis—are employed.

* Prepared by the respective companies.

Canadian Chemical and Cellulose Company Limited.—This Company is developing an active and expanding research and development program through two of its operating subsidiaries, Columbia Cellulose Company, Limited and Canadian Chemical Company, Limited. The former operates a pulp mill at Prince Rupert, B.C., and is carrying out intensive cellulosic research in well equipped pilot plants and laboratories. The latter has a petrochemical plant at Edmonton. A Manager of Research and Development has recently been appointed and an intensive schedule of product and process development has been initiated.

The Consolidated Mining and Smelting Company of Canada Limited.—The Consolidated Mining and Smelting Company conducts research over a broad field embracing process studies in extractive metallurgy and chemical processes, fundamental studies in ore dressing, pyrometallurgy, electrochemistry, gas reactions, etc., and the investigation of the properties and utilization of non-ferrous metals. Recent developments include the commercial production of indium metal and the production of various metals in a state of extreme purity for research and special uses.

Dominion Rubber Company Limited.—The Dominion Rubber Company maintains a well equipped research laboratory which carries on basic research in the field of organic chemistry. Particular emphasis is given to the development of new and improved chemicals required by the rubber industry, including such items as accelerators, activators, antioxidants and the basic chemicals required for the production of synthetic resins.

Imperial Oil Limited.—The Research Department of Imperial Oil Limited in its laboratories at Sarnia, Ont., employs 120 chemists, technicians and clerks. It conducts fundamental studies on fuel composition, lubrication and the characteristics of asphalts and waxes. The scope of work also includes evolving new methods of refining, improving existing processes, developing new products and extending the application of established products as well as improving their quality. Features of the Department are the well-equipped engine and asphalt laboratories, the library facilities and the standardization laboratory that acts in a refereeing capacity and monitors the accuracy and precision of analytical procedures employed in the refinery laboratories across the country. At the present time the research laboratories are undergoing considerable expansion.

International Nickel Company of Canada Limited.—The International Nickel Company of Canada Limited carries out both fundamental and applied research in very efficient and well equipped laboratories operating at Copper Cliff, Ont. These laboratories are entirely devoted to research in the process fields but the Company, through its subsidiaries in the United States and the United Kingdom, carries out fundamental work in the physical metallurgy fields.

Maple Leaf Milling Company Limited.—The Research Department of the Maple Leaf Milling Company conducts both applied and fundamental research on materials and methods of flour milling, bread and cake baking and on prepared household mixes. Through its Products Control Branch, it also standardizes the quality control laboratories in its various mills throughout the country. Sanitation packaging control are also centred in the research laboratories.

Shawinigan Chemicals Limited.—For over forty years this Company has been actively engaged in fundamental and applied research. From its extensive and well equipped research laboratories at Shawinigan Falls, Que., have come pioneering developments in such widely diverse fields as electrometallurgy, organic chemicals, and synthetic plastics. Many of these developments form the basis of worldwide industries.

Polymer Corporation Limited.—This Corporation maintains one of the largest industrial research organizations in Canada. Its Research and Development Division is well equipped to study all phases of synthetic rubber development from the evolution of polymerization recipes and research on new raw materials, through studies of physical properties and

structure, to end-use development of new polymers. A recently completed modern research laboratory houses special laboratories for monomer research, polymerization and development work, electron microscopy, infra red spectrophotometry, micro-compounding and physical testing, and latex technology and applications. Other major facilities include rubber compounding and evaluation and technical service laboratories as well as several pilot plant units equipped for semi-commercial production and evaluation of new processes in both the free-radical and ionic systems.

Aside from the scientific research carried on by the expanding facilities of large individual companies, primarily for their own benefit, a great amount of industrial research continues to be done under the auspices of the federal and provincial governments, sometimes with the co-operation of universities. Two examples of this Canadian habit of co-operation between industries and other organizations may be cited: the Research Division of The Hydro-Electric Power Commission of Ontario, a provincial service, and the Pulp and Paper Research Institute of Canada, intimately associated with McGill University. The research work of these organizations is briefly described in the following sections.

The Hydro-Electric Power Commission of Ontario.—The Research Division of Ontario Hydro, with a present staff of 300, provides testing, investigation and research services for all phases of the utility's engineering design, construction work, and system operation and maintenance. The Division maintains a close liaison with other research organizations and power utilities, and staff members participate in the committee work of major technical societies and standardizing associations.

Electrical investigations pertain to improvements in equipment for generating, transmitting, distributing and utilizing power. Problems of electrical insulation, system disturbance recording, protection against lightning, energy metering and illumination are among those studied in such investigations. Attention is given to the performance and efficiency of power equipment, to improved measuring techniques, and to means of minimizing the hazards of electric shock.

Among the structural and mechanical topics studied are the following: metallic corrosion; stresses in structures; noise and vibration conditions; soil mechanics as related to foundations, roads, and earth dams and dykes; the physical properties of structural components and of numerous items such as conductor joints and line hardware; the mechanical performance and safety features of various types of machines; welding materials, techniques and applications; and a variety of problems associated with the design of concrete structures, the application of masonry materials, and the production, placement and quality control of all concrete used.

In addition to chemical analyses and tests performed on a wide range of materials and products purchased, chemical research work is conducted with regard to such subjects as wood preservation, plastics applications, protective coatings, brush and weed control, lubrication, liquid electrical insulants, water treatment, thermal insulation, and corrosion prevention.

Other studies contributory and supplementary to the main branches of work are carried on in the fields of physics, biology, meteorology, petrology and mathematics.

The Pulp and Paper Research Institute of Canada.—Because so much of the Canadian economy is dependent upon pulp and paper the need has long been recognized for research on cellulose chemistry and other technologies associated with the use of cellulose. In 1913 the Federal Government established the Forest Products Laboratories in Montreal. Its Pulp and Paper Division began to receive support from the pulp and paper industry in 1925 and soon after started to work closely with the Chemistry Department of McGill University. The present building on the University grounds was opened in 1929 to provide increased accommodation and facilities for its expanding activity in pulp and paper research.

In 1950 the Institute became an independent corporation under federal charter, administered by a Board of Directors consisting of appointees from McGill University, industry, and the Federal Department which is now Northern Affairs and National Resources.

This Corporation has taken over the building it occupied on the University grounds, together with all its equipment—the land remains University property and is lent to the Corporation. The Corporation has complete control of the operation, subject to the provision that work leading to degrees will be under the control of the appropriate faculties of the University.

McGill's entire Division of Industrial and Cellulose Chemistry and part of the Division of Physical Chemistry form integral parts of the Institute; to some degree the Institute has also become the bureau of standards for the pulp and paper industry.

Numerous contributions to the fundamental knowledge of the chemistry of cellulose and lignin, the chemical and mechanical pulping of wood, the behaviour of fibres in water, and the testing of pulp and paper have been made by Institute personnel. At present, studies in physical chemistry are being conducted mainly on the surface chemistry and swelling of cellulose, and the flocculation of suspensions of fibres, while research in organic chemistry is being carried out on the reactivity of cellulose, the properties and constitution of cellulose derivatives, and the chemistry of lignin and of bark. Much work is also being done on the various methods of producing chemical pulp.

University Research.*—Research undertaken in the universities is in three broad categories: research undertaken by the student under the guidance of a professor, or committee, to meet requirements for an advanced degree; that undertaken by the professor, which may be of a more or less continuous nature; and larger research projects undertaken co-operatively on a faculty or interfaculty basis in the university laboratories or in such special institutions as medical research laboratories, institutes of microbiology and hygiene, science service laboratories, and agriculture colleges.

Research has always been an integral part of university life at the graduate level and the amount undertaken decade by decade has more than kept pace with the growth of graduate schools. Research undertaken in the universities is limited largely by the number of staff members, time available, and equipment. Professors have busy schedules of lecturing, examining and assisting in academic administration. Students too are busy with lectures, reading and assignments and in addition they feel an urgent need to complete their task in a specified time. Nevertheless an increasing number of scholarships, fellowships and grants have not only enabled more students to undertake research but have enabled both professors and students to undertake more complex tasks.

Until 1919 only two universities, Toronto and McGill, offered graduate courses beyond the master's degree. In that year they had graduated eleven students with doctorates in pure science. Today Ontario has four, Quebec three, and six provinces each have one major university with graduate facilities. All of these have provision for obtaining advanced degrees in science although the number of fields is restricted in all but the larger institutions. During recent years the universities have graduated annually about 200 with doctorates and 1,500 with master's or equivalent degrees in arts and science. In addition there are many colleges and universities which provide excellent undergraduate training in research in many fields.

NOTE.—The interpretation of the symbols used in the tables throughout the Year Book will be found facing p. 1 of this volume.

Agriculture is Canada's leading primary industry, one whose continued growth and importance is felt in every sector of the economy. In the postwar years 1946-53 Canadian farmers realized an average net income of \$1,611,600,000 from farming operations. At the beginning of this century 40 p.c. of those gainfully employed were engaged in agriculture; today less than 20 p.c. are so employed. The decline of agriculture as a field of employment relatively to other sectors of the economy—notably manufacturing—has been accompanied by an increase in farm output, to two and one-half times that attained at the century's opening. This increase in output may be attributed to several factors: more scientific methods of farming, especially in regard to the dry land farming techniques of the western provinces, more diversified farming and the increase in mechanization. From 1947 to 1950 alone Canada's farmers spent an average \$304,000,000 a year on new equipment. In 1951 farming in Canada was carried out using nearly 400,000 tractors, 90,000 grain combines and 196,000 motor trucks, as well as 330,000 automobiles; all these figures are greatly in excess of totals for the same vehicles and machinery ten years earlier, and are a revolutionary development compared with the turn of the century. Land under cultivation, perhaps one of the best measures of the significance of agriculture in the economy, has tripled in the last 50 years and is now put at nearly 100,000,000 acres. Agriculture in Canada represents immense long term capital investment: recent estimates put the value of farm lands and buildings, implements and machinery and livestock, representing capital invested in some two-thirds of a million farms, at near the 10,000,000,000 dollar mark.

The historical development of agriculture in Canada has been dealt with in previous Year Books. The 1924 edition, pp. 186-191, discussed "The Development of Agriculture in Canada"; the 1939 edition, pp. 187-190, dealt with the "Historical Background of Canadian Agriculture"; "Canadian Agriculture during the War and Post-War Periods" was featured in the 1946 Year Book, pp. 200-211. These features and more specialized

aspects such as marketing, irrigation, soil zones, the Canadian Wheat Board and other topics dealt with in former Year Books and still of current interest are listed in Chapter XXIX of this Year Book under the heading "Special Material Published in Former Editions of the Canada Year Book."

Section 1.—Federal Government in Relation to Agriculture*

The creation of the Department of Agriculture is provided for in Sect. 95 of the British North America Act (1867) which states in part that "in each province, the legislature may make laws in relation to agriculture in the province" and that "the Parliament of Canada may from time to time make laws in relation to agriculture in all or any of the provinces; and any law of the legislature of a province relative to agriculture, shall have effect in and for the province as long and as far as it is not repugnant to any Act of the Parliament of Canada". As a result of this provision there now exists a Department of Agriculture, with a Minister of Agriculture at its head, in the Federal Government and in each of the provinces except Newfoundland where agricultural affairs are dealt with by the Agricultural Division of the Department of Mines and Resources.

Subsection 1.—General Policy and Price Stability

All the activities of the Department of Agriculture are directed toward the production of marketable farm products. Apart from the initial research and experimentation in connection with operations on the farm itself it is essential that processing, grading and inspection of farm products should be of a high standard if markets both at home and abroad are to be retained and new ones developed; so that the inspection and grading activities of the Department have become of increasing importance. By inspection and grading the buyer is able to obtain a product suited to his requirements; the producer is compensated according to the grade of his product and is thus encouraged to produce a high quality commodity.

The results of experimental and research work and the policies of the Department in general are made available to farmers and to the public through bulletins, the press, radio, television and the screen. Releases on market conditions and prices are a regular feature of this publicity.

The Federal Government has passed a number of Acts designed to give price stability in marketing agricultural products. The most important of these is the Agricultural Prices Support Act, 1944, which permits the Federal Government to stabilize the price of any agricultural product, except wheat and coarse grains which are marketed under other legislation, by outright purchase or by underwriting the market through guarantees or deficiency payments. The following products have been supported under the Act when occasion arose: potatoes, apples, dried white beans, extracted honey, dry skimmed milk, creamery butter, shell eggs, cheese, hogs and cattle.

Under the Agricultural Products Co-operative Marketing Act, 1939, price support may be extended by the Government to assist in financing initial payments made by co-operatives to primary producers on delivery of the products for sale. Initial payments are subject to negotiation between co-operative and government but may not exceed 80 p.c. of the average returns for like grades and qualities during the previous three years and the Government guarantees banks against loss in advancing funds to co-operative organizations with whom agreements have been signed. The legislation has been used extensively by co-operatives and agreements through the years have covered onions, potatoes, corn, many seed crops and ranch bred fox and mink pelts.

* Except as otherwise indicated this material was prepared under the direction of Dr. J. G. Taggart, C.B.E., Deputy Minister of Agriculture, Ottawa.

A number of provincial governments have legislation providing for the establishment of a Board to regulate or control the marketing of agricultural products sold within the province concerned. Under the British North America Act a provincial government cannot legislate with regard to products marketed outside the province or in export trade but under the Agricultural Products Marketing Act, 1949 the Federal Government may at discretion permit provincial marketing legislation to be applied in whole or in part to the marketing of agricultural products outside the province concerned and in export trade.

The Agricultural Products Board Act, 1951 states that the Board may buy, sell, export and import agricultural products when directed by the Governor in Council.

1.—Loans Approved and Disbursed under the Canadian Farm Loan Act, Years Ended Mar. 31, 1945-54.

NOTE.—Figures for previous years are given in the corresponding table of former Year Books beginning with the 1940 edition.

Year Ended Mar. 31—	Loans Approved					Loans Paid Out		
	First Mortgage		Second Mortgage		Total Amount	First Mortgage	Second Mortgage	Total Amount
	No.	Amount	No.	Amount				
		\$		\$	\$	\$	\$	\$
1945.....	728	1,623,000	176	100,700	1,723,700	1,561,174	100,235	1,661,409

1954.....	2,091	7,366,800	591	449,950	7,816,750	6,606,323	394,216	7,000,539

Farm Credit.—The Federal Government has made provision for the extension of credit to farmers under the Canadian Farm Loan Act and under the Farm Improvement Loans Act. The Prairie Grain Producers' Interim Financing Act, 1951 was emergency legislation intended primarily to relieve any hardship caused by the extremely unfavourable harvesting conditions of that autumn.

The Canadian Farm Loan Act.—Under this Act long term farm mortgage credit is available to Canadian farmers through the agency of the Canadian Farm Loan Board, established in 1929. Loans repayable on an amortized plan with equal annual payments over periods not exceeding 25 years are made to buy livestock, farm equipment and farm land, to make improvements and to pay debts and operating expenses. The Board may lend up to 60 p.c. of appraised value and up to \$10,000 on first mortgage, and up to 70 p.c. and \$12,000 on combined first and second mortgages.

In the year ended Mar. 31, 1954 loans were approved for a total of \$7,816,750, an increase of 33 p.c. over the previous year. At Mar. 31, 1954, 17,267 first mortgage loans and 2,828 second mortgage loans were outstanding for a total of \$35,074,819.

2.—Loans Approved under the Canadian Farm Loan Act by Province, Year Ended Mar. 31, 1954

NOTE.—Figures for previous years are given in the corresponding table of former Year Books beginning with the 1940 edition.

Province	Loans Approved				
	First Mortgage		Second Mortgage		Total Amount
	No.	Amount	No.	Amount	
		\$		\$	\$

British Columbia.....	102	389,400	10	8,700	398,100
Totals.....	2,091	7,366,800	591	449,950	7,816,750

*The Farm Improvement Loans Act.**—The Farm Improvement Loans Act, administered by the Department of Finance, is designed to provide intermediate term credit and a type of short term credit for farmers to enable them to equip, improve and develop their farms. There is scarcely anything a farmer needs in the way of mechanical aids for his farm operation or for his home for which a loan may not be made. Assistance may also be obtained for the purchase of livestock, principally foundation or breeding stock; for installation or repair of farm electric systems; for repair, alteration or construction of farm buildings, including the home; and for fencing, drainage and other development projects. Credit is provided on security and terms suited to the individual borrower.

The chartered banks are the lending agency under the Act. The legislation, originally operative for three years 1945-47, has been extended from time to time for three year periods. The Federal Government guarantees each bank against loss up to 10 p.c. of the total loans made by it during the period. Under the Act the guarantee is limited by a provision stating that it will not apply to any loan made after the aggregate of all loans made by all banks in a given period reaches an amount fixed by statute. In February 1951 the Act was extended for three years and the statutory loan aggregate was fixed at \$200,000,000. Within two years the loans almost totalled this amount and a further extension of the Act was made for three years from Apr. 1, 1953. The aggregate of loans for this three year period, affected by the guarantee, is set at \$300,000,000. By Dec. 31, 1954, 282 claims amounting to \$149,814 had been paid under the guarantee.

Loans may be obtained for terms up to 10 years with interest not to exceed 5 p.c. The maximum amount to be advanced to a borrower at any one time was increased to \$4,000 by the legislation of 1953. The borrower must provide from 10 p.c. to 40 p.c. of the cost of his project.

By Dec. 31, 1953, \$383,184,852 or 74·6 p.c. had been repaid of the total loans made. Of those made during the first three years of operation, all but 0·2 p.c. had been repaid; of those made during the second three years, all but 1·4 p.c. had been repaid; all but 15·2 p.c. had been repaid of those made during the next three years; and for the twenty-one months of the fourth period ended Dec. 31, 1954, 32·5 p.c. of the loans made had been repaid.

* Prepared by D. M. McRae, Supervisor, Farm Improvement Loans Act, Department of Finance, Ottawa.

3.—Loans Made under the Farm Improvement Loans Act by Purpose 1945-54

Purpose	1953		1954		Total Loans Since Inception in 1945	
	Loans	Amount	Loans	Amount	Loans	Amount
	No.	\$	No.	\$	No.	\$
Purchase of agricultural implements.....	73,934	88,057,198	48,898	52,069,707	414,554	461,100,104
Construction, repair or alteration of or additions to any structure on a farm.....	3,876	5,057,563	4,239	5,661,520	23,576	27,621,908

Prairie Grain Producers' Interim Financing Act, 1951.—This Act, which came into force Jan. 15, 1952, provides short term credit to grain producers in the Prairie Provinces who because of congested delivery points or inability to complete harvesting of their grain are in need of credit until their grain can be delivered. Individual advances can be made to a maximum of \$1,000.

Prairie Farm Assistance Act.—The Prairie Farm Assistance Act, passed in 1939 and administered by the federal Department of Agriculture, provides for direct money payments by the Federal Government, on an acreage basis, to farmers in areas of low crop yields in the Prairie Provinces and the Peace River District of British Columbia. The Act was designed to assist the municipalities and provinces in years of crop failure to meet relief expenditures which would normally be too great to be assumed by them. The Act provides that payments be made to farmers under certain conditions and terms and, in order that Federal Government costs may be defrayed to some extent, it is required that 1 p.c. of the purchase price of all grains (wheat, oats, barley and rye) marketed in the Prairie Provinces be paid to the Federal Government and set aside in a special fund for the purposes of the Act.

If the farmer, who may be an owner, a tenant, or a member of a co-operative farm association engaged in farming, is located in a crop failure area, he may be awarded assistance on not more than one-half of the cultivated land or a maximum of 200 acres. The rates of payment range up to \$2.50 per acre.

From the inception of the scheme to Mar. 31, 1955 the total amount paid out under the Act was \$177,397,626. The amount collected under the 1 p.c. levy to Mar. 31, 1955 was \$85,767,933.

Subsection 2.—Agricultural Research and Experimentation

The Department of Agriculture conducts on a broad scale scientific research and experimentation on the control of pests and diseases, the nutritional requirements of plants and animals, the breeding and testing of new species and varieties, the microbiology of soils and foods, investigations of crop production and cultural methods, and many other matters. This work is carried on mainly by the Science Service and the Experimental Farms Service and, in addition to providing information on current production problems, is of paramount importance to the long time well-being of agriculture.

Conservation of the soil is of basic importance to agriculture and research in the form of soil surveys and study of methods for the protection and conservation of soil resources is carried on by the Department in collaboration with the provincial governments. Studies include the chemistry of the soil, cover crops, value of manure and fertilizers, cultural methods, use of tillage machinery and development of large land reclamation projects.

The Department has for many years conducted investigations into the control of insects and diseases of forest trees. The limited silvicultural work carried on has aimed at maintaining a supply of trees suitable for planting on the prairies as shelter belts against the wind and to prevent soil and snow drifting. Basically this is also a soil conservation measure.

Much of the research and experimental work is concerned with crop plants for, after the soil itself, these are of chief importance. This work includes the breeding and testing of suitable varieties of crops to be grown under the varying climatic conditions throughout Canada. The culture and the nutritional value of crop plants and the suitability of food crops for human consumption—even their appeal or lack of appeal to a housewife—are continuously under study.

Work on livestock includes mainly the feeding, care and handling of stock, its protection from insects and diseases and the production of suitable market and breeding types. A limited amount of work has also been done on the production of new strains of animals.

Research and study of processed products such as milk, butter, cheese and meat and of fruits and vegetables is a most active item in the scientific work of the Department. Storage of agricultural products creates many problems that call for constant study.

Chemical and biological research and experimentation is chiefly of an applied nature. The Department does not specialize in so-called fundamental research involving the discovery of basic scientific phenomena and laws but concentrates on the adoption of known processes and the application of such processes to specific aims. Some discoveries bordering on fundamental research however are occasionally made, and extension of research is also made to some degree into the basic field where certain information is lacking in applied science.

Agricultural research, particularly in plant science, must be decentralized to a great extent as most problems must be studied where they occur. Apart from the value to farmers of having a local source of information the experimental farms and science laboratories are widely distributed because the work can be done in no other way. In addition to the headquarters of the Experimental Farms Service at Ottawa work is carried on at 32 branch experimental farms, 20 substations and 2 forest nursery stations. Experimental work of local application is done at 232 illustration stations. The work of the Science Service, centralized at Ottawa, is also augmented by that of about 100 laboratories located throughout the country.

In the field of economic research, studies in farm management, land utilization, marketing and farm family living are undertaken in all parts of the country. The scope of the scientific and experimental work of the Department is revealed when it is realized that there is no plant or animal in Canada that is not susceptible to damage by disease caused by bacteria, fungi or viruses or subject to attacks by insects or, for animals, damage by internal parasites.

Subsection 3.—Protection and Grading

Unlike manufactured articles, even close scrutiny of most agricultural products is little help in determining their purity as food, or their value to the farmer for further production. Obviously products used as food must be pure and healthful and must satisfy standards of quality established for them. If agriculture is to be conducted on a sound basis, the supplies farmers buy—seeds, feeds, fertilizers and pesticides—also must carry a guarantee that they will be as represented. Much of the research and experimental work would be of no avail if legislation were not provided to see that the end-product of such work was satisfactory. In addition Canada's livestock, crops and trees must be protected from diseases that might be introduced with importations or that might originate in Canada.

These protective and grading services are a most important part of the work of two sections of the Department of Agriculture: the Production Service and the Marketing Service. Generally the protective features and the grading to standards or approval of analyses of farm supplies come under the Production Service. The grading of most food products is the responsibility of the Marketing Service. Legislative authority to impose protective and grading services is derived from about 20 Acts or their accompanying Regulations.

Health of Animals.—The protection of the health of Canada's livestock is a most important service. To guard against the introduction of contagious diseases from foreign lands stringent regulations are enforced by the Health of Animals Division covering the importation of livestock, livestock products and even packing material and litter. Provision is also made for the control or eradication of animal diseases developing within Canada. Programs directed at the eventual eradication of such diseases as bovine tuberculosis and brucellosis are a continuing part of the work. The Division is responsible for the inspection of animals slaughtered for food and post-mortem examination is made of all carcasses in the course of slaughter and dressing before the meat is approved for human consumption. Sanitary conditions in packing plants and slaughter houses come under review and all canned meats must meet high standards of processing to qualify as food.

Protection of Supplies.—The Plant Products Division, in co-operation with the provinces and other agencies, is concerned primarily with the administration of Acts respecting feeding stuffs, fertilizers, pesticides, hay and straw, fibre flax and binder twine, and the production of seed. The inspection services of the Division have three main functions: (1) to enforce the Acts that regulate the sale of the agricultural supplies; (2) to provide as required such services as seed crop inspection and the sealing of seed produced from inspected and other approved crops; (3) to co-operate with provincial governments and other agencies in promoting and improving supplies of seeds, feeds, fertilizers and pesticides.

Visual inspection is of little value for most of these products and laboratory testing is necessary; the laboratory services of the Division maintain branch offices across Canada. Testing seeds is a complex matter, for they must be tested for germination, variety, purity and freedom from weeds and other kinds of seeds before they are graded. All feeding stuffs, fertilizers and pesticides are subject to registration and this is refused if the use of products would be dangerous, if the ingredients or analyses are unsatisfactory or if the claims made regarding their value are incorrect or misleading.

Plant Protection.—The Division of Plant Protection functions with regard to plants and plant products much as the Health of Animals Division does with animals, and it administers the Destructive Insect and Pest Act. Imported nursery stock and plant material are all subject to inspection as protection against the introduction of insects and diseases. Extensive inspection is maintained within Canada to identify, localize and exterminate dangerous enemies of crops and trees. Provision is also made for the inspection of potato crops to be used for seed, for domestic and export markets and for the issuance of health certificates required for a wide range of plant products.

Standards and Inspection.—The Department has been steadily establishing and improving standards of quality for agricultural products for over 50 years. This work originated in an effort to improve the quality of export commodities and has gradually been extended to include many products that move in interprovincial trade. Most provinces have adopted these standards for enforcement on products marketed within their boundaries.

Grade standards are established and enforced for dairy products, meats, eggs and poultry, fresh and processed fruits and vegetables and seeds and are widely recognized outside Canada. Many Canadian foods and agricultural products command premium prices because of the strict quality standards maintained.

Dairy Products.—Producers, processors and consumers all derive benefits from grading and inspection services of the Dairy Products Division. Authority to carry out such services is contained in the Canada Dairy Products Act which established national standards for dairy products and regulates interprovincial and international trade. Grade names and standards have been prescribed for cheddar cheese, creamery butter and dry skimmed milk and each of these products must be graded before entering into interprovincial or international trade. Dairy products for which grade names have not been established, such as ice cream, evaporated milk and process cheese, are required to meet prescribed standards for composition, packing and marking before being exported from Canada, imported into Canada or moved from one province to another. Authority to carry on the grading and inspection of dairy products made and sold within the province of origin is derived from legislation passed by the province concerned. Nine provinces have either passed or are preparing to pass legislation concurrent with that contained in the Canada Dairy Products Act and Regulations thereunder.

Meats.—In addition to the veterinary inspection of carcasses for wholesomeness, inspection and grading of meats for quality is of importance. All hogs slaughtered at inspected and approved plants are rail graded, that is, the farmer is paid on the dressed weight and quality of the carcass. All beef carcasses in inspected plants are graded and the better grades are marked with the national brands according to standards of 'Choice', 'Good' or 'Commercial' qualities. Lamb and veal carcasses are graded on an optional basis.

Wool is inspected and graded in registered wool warehouses.

Eggs and Poultry.—There are 1,274 registered egg grading stations for the grading and packing of eggs; and 43 registered egg breaking stations for the processing, grading and packing of frozen egg products. Registered poultry processing and eviscerating stations for the processing, eviscerating, grading and packing of poultry total 338. Because of a rapidly increasing demand for eviscerated poultry the quantity processed in registered processing and eviscerating plants has increased—from approximately 4,000,000 lb. in 1950 to 45,046,959 lb. in 1954.

Inspection of eggs, poultry and frozen egg products is compulsory on all sizable quantities intended for export, and also for interprovincial poultry shipments of 10,000 lb. or over. These products are also checked inspected periodically for grade when offered for wholesale and retail sale. The sale of eggs by grade at retail is compulsory throughout Canada and the sale of poultry by grade at retail is compulsory in many of the larger consuming centres.

Fresh Fruits and Vegetables.—Grades are established for all principal fruits and vegetables produced in Canada. Practically all products for which grades are established must be inspected and certified if for shipment out of Canada. In addition inspection and certification is compulsory on specified products if produced in certain provinces and shipped to another province. To provide this service, mostly seasonal in nature, a staff of inspectors is maintained throughout the foremost producing areas across Canada. In the larger distributing centres an inspection staff is maintained to administer grading,

packaging and marking regulations at the wholesale and retail level, to collect and compile market statistics and to provide on request a commercial inspection service covering the quality or condition of produce received by the wholesaler. The shippers, brokers, commission houses and wholesalers dealing in fruits and vegetables in interprovincial, export or import trade must be licensed and are subject to established regulations.

Processed Fruits and Vegetables.—When special regulations covering canned fruits and vegetables were established under the Meat and Canned Foods Act in 1907 Canada became the first country to have any such legislation. Regulations under the Meat and Canned Foods Act now establish grades for practically all canned, frozen or dehydrated fruits and vegetables as well as for jams. Sanitary regulations are also established and are enforced by a staff of inspectors who provide an inspection service covering interprovincial, export or import movement of processed fruits and vegetables. This movement constitutes about 98 p.c. of the entire industry in Canada, the sales value of which amounted to approximately \$250,000,000 in 1954 as compared with \$20,000,000 in 1919. Although no grades are established in the regulations the processing and packing of such products as pickles, olives, vegetable soups, etc. is also supervised and controlled. About 560 processing plants of one kind or another operate under a Certificate of Registration issued by the Department of Agriculture.

Honey.—Regulations are established for the classifying, grading and marking of all honey moving in interprovincial or export trade. Inspection is compulsory on honey being shipped out of Canada and administrative inspections for class and grade are made at the wholesale and retail levels on the domestic market. Interprovincial and export shippers and packers of pasteurized honey must be registered with the Department of Agriculture.

Maple Products.—Regulations are established for the prohibition of adulteration of maple products, for inspection and analysis, for proper identification of maple products and of 'colourable imitations' and for the licensing of manufacturers or packers and of all sugar bush operators operating in the interprovincial or export market. To enforce the regulations periodic inspection is made of the manufacturing plants, markets, stores and restaurants.

Subsection 4.—Canada's Relationship with FAO

The first Conference of the Food and Agriculture Organization of the United Nations was held in Quebec City in 1945 and at the 8th Session the Conference celebrated its tenth anniversary in the FAO building in Rome, Italy, November 1955. During this ten year period the membership progressed from 42 to 71 nations and world agricultural production increased substantially. In 1946 the immediate issue was food shortages but by 1954 the disposal of surplus foodstuffs had become a problem for some countries. However as the Committee on Commodity Problems observed in June 1955, "On the whole, the world food position, despite some progress in production, still presents the long-standing problem of unequal rates of progress among different regions and wide disparities in consumption standards".

The organization and objectives of FAO have been explained in earlier editions of the Year Book. FAO is concerned mainly with the problems of countries that have not yet reached a high degree of economic development. Briefly the chief aims are: to help nations raise their standard of living; to improve the nutrition of the people of all countries; to increase the efficiency of farming, forestry and the fisheries; and thus to give all people more opportunities for productive work.

FAO has neither the funds nor the authority to buy and distribute food, supply fertilizers and farm machinery, or to build and staff laboratories, but it does effectively assist member nations by making an over-all statistical study of world food supplies and requirements and supplying information requested by members; by sending experts to work with scientists and technicians of member governments asking for this help and by

dispatching special missions to countries requesting them; and by making definite recommendations for concerted action and providing a means whereby nations may work together to carry out programs.

Technical Assistance.—Although routine activities such as the collection and compilation of statistics and other information are still important functions of FAO, most of the resources at the disposal of the Director-General are used for technical assistance work. Much of this is of a continuing nature and forms part of the Organization's regular activities and is supplemented by special short term projects based on agreements with recipient countries. FAO has also given attention to the training of suitable persons in the underdeveloped countries in order to qualify them to continue the work developed by outside experts sent under the technical assistance program. To accomplish this, emphasis has been placed on training centres and seminars and the provision of fellowships and scholarships to qualified persons for study abroad.

FAO operates technical assistance programs in 55 countries. About 600 experts were in the field at the end of 1955 and the total technical assistance budget for that year exceeded \$7,000,000. FAO has transmitted to governments more than 300 final reports from its experts. These contain concise summaries of recommendations for government action and many set out detailed estimates of the cost of carrying out specific projects. However the implementation of development plans to raise agricultural productivity and improve the nutritional level of their populations remains the responsibility of the national governments.

Some results of the technical assistance program have appeared in the form of increased production but most of the work is of a long term nature—land reclamation, forest conservation and fisheries development. Some illustrations of the progress made are as follows:—

- (a) In the hybrid seed corn program FAO-aided international action against the desert locust in the Middle East has prevented any serious loss to food production in the past three years. Plans for the 1954-55 anti-locust campaign throughout the Arabian Peninsula were laid by an FAO working party.
- (b) In Thailand FAO veterinarians are assisting in a program to control livestock diseases and have extended widely field trials of vaccine used against Newcastle disease in poultry: 80,000 fowl were vaccinated in 1954 compared with 3,000 in 1953.
- (c) Under an FAO-sponsored rice hybridization project at Cuttack, India, more than 6,000 plants combining the best qualities of Indian and Japanese varieties (*indica* and *japonica*) were produced in 1953 and 1954 and their seed distributed to participating countries. India reported that individual selections had been observed with double the yields of their *indica* parents, and Burma and Malaya reported that some of the hybrids showed high resistance to the stem borer pest.
- (d) In India FAO experts helped reorganize government farm machinery workshops in Uttar Pradesh and trained supervisors and foremen in the design and welding of farm equipment. In the Talkatora workshops an estimated 300 p.c. improvement in output was achieved in the first six months of 1954.
- (e) The government of Burma has adopted a national plan for forest development based on an FAO expert's recommendation. In Austria, through advice from FAO on measures to increase forest productivity, an estimated 20,000 additional acres were reforested by the end of 1954.

Regional Activities.—The importance of regional activities has increasingly engaged FAO's attention. Fisheries councils have been established for the Indo-Pacific region and for the Mediterranean and regional forestry commissions have been established for Asia, Europe, Latin America and the Near East. The International Rice Commission, although not limited in membership to Far Eastern countries, operates chiefly as a regional body. A European Foot-and-Mouth Disease Commission has been established and an FAO Desert Locust Control Committee for many Middle Eastern countries plagued by locusts. Active co-operation is maintained between FAO and the regional Economic Commissions of the United Nations and senior FAO officers have been stationed at the headquarters of the Commissions to maintain continuous liaison and direct joint programs of work in fields of common interest. A number of regional meetings on agricultural plans,

prospects and programs as well as numerous regional technical meetings have been held and various regional undertakings are in progress in addition to those being implemented through formally constituted commissions or councils.

Surplus Disposal.—In recent years FAO has given a good deal of attention to questions of surplus disposal under the following headings:—

- (a) the promotion of suitable methods of disposal on special terms for specified purposes, particularly to aid economic development, supplementary welfare distribution schemes, and emergency relief;
- (b) the formulation of principles and guiding lines to be observed in surplus disposal programs and transactions;
- (c) the creation of an intergovernmental forum in Washington, D.C. for constructive consultations on these questions; and
- (d) the organization of field missions to investigate on the spot the absorption possibilities of potential recipient countries.

The principles and guiding lines have been fully set out in the printed pamphlet "Disposal of Agricultural Surpluses—Principles Recommended by FAO", published in December 1954.

To assist promotion of surplus disposal programs and observation of agreed principles the Committee on Commodity Problems established a Consultative Sub-Committee on Surplus Disposal. The Sub-Committee is open to interested FAO member governments and meets in Washington, D.C. It has also established Working Parties on dried skim milk and on butter. Canada participates in each of these committees.

Canada and FAO.—Canada is a member of the FAO Council and a Canadian was a member of the Co-ordinating Committee in 1954 and 1955. In their individual capacities, Canadians have been active in carrying out the work of FAO. Members of the Canadian delegation take an active part in the Conference proceedings and a number of Canadian specialists have undertaken assignments abroad as part of FAO headquarters staff and force of technical experts. In Canada an Inter-departmental Committee of representatives of the federal Departments of Agriculture, Fisheries, Northern Affairs and National Resources, National Health and Welfare, External Affairs, Finance, and Trade and Commerce serves in an advisory capacity on matters pertaining to FAO and as a liaison with the Organization on non-policy matters.

Section 2.—Provincial Governments in Relation to Agriculture*

Subsection 1.—Agricultural Services

Newfoundland.—The Government agricultural services in Newfoundland are operated by the Agricultural Division of the Department of Mines and Resources. The Division is in charge of a Director, assisted by a staff of 21 officers including an Assistant Director and four men employed on a contractual basis. The Director is responsible to the Deputy Minister of the Resources Branch of the Department.

For purposes of administration and extension work the Province is divided into nine districts with a Fieldman with permanent headquarters located in each district except Labrador, where the agricultural officer is resident for the summer months only. Officers in charge of different phases of agricultural development visit each district on assignments from the St. John's office.

Departmental policies in support of the agricultural industry in Newfoundland include assistance in the clearing of land with Government owned and operated tractors; the distribution of ground limestone at a subsidized rate; the payment of bonuses on purebred sires; and grants to agricultural societies and assistance to marketing organizations and exhibition committees. An inspection service is provided for poultry products, vegetables and blueberries, production of the latter being encouraged by the burning of suitable berry areas and the improvement of roads and trails leading to them. Small fruit development generally is promoted through the distribution of quality foundation stock.

* Information supplied by the agricultural authorities of the various provinces.

The Agricultural Division co-operates with the Department of Education in furthering the 4-H Club movement in the Province and accepts responsibility for all projects pertaining to agriculture.

Every encouragement is given to production of livestock. The Division has maintained an experimental sheep flock for the past four years under the management of a Scottish shepherd. Poultry and beef production have increased with favourable marketing conditions and Departmental assistance and loans under the Provincial Farm Development Loan Act. Two veterinarians, employed by the Division, supervise the health of animals program and the eradication of bovine tuberculosis has been carried on over the past five years as a joint federal-provincial project.

Prince Edward Island.—The Provincial Department of Agriculture is presided over by a Minister assisted by a Deputy Minister. The Department also employs a Dairy Superintendent and Assistant Dairy Superintendent, a Director of Veterinary Services, a Horticulturist, and an Agricultural Engineer, five subsidized practicing Veterinarians, a Soil Analysis Assistant, a Poultry Director, an Agronomist, three Field Representatives, a Director and Assistant Director and two extension workers of Women's Institutes.

Nova Scotia.—The Department of Agriculture and Marketing endeavours to "help the people to help themselves" through strengthening member interest in such organizations as the Nova Scotia Federation of Agriculture, Nova Scotia Fruit Growers' Association, through various agricultural co-operative organizations, credit unions and several producer organizations. The Department is assisted by the Nova Scotia Advisory Committee on Agricultural Services which was established a few years ago to further the effective prosecution, within the Province, of agricultural policies and projects of the Federal and the Provincial Departments of Agriculture. The main purpose and function of the Committee, which meets quarterly, is to determine ways and means by which the purposes of both Departments of Agriculture may best be served, and how the work of those Departments may be co-ordinated and directed through integrated agricultural policies and with a minimum duplication of services.

New Brunswick.—Provincial Government policy concerning agriculture in New Brunswick is directed by the Department of Agriculture. This Department has as its head the Minister of Agriculture who is assisted by a Deputy Minister and the Directors of the following services: extension, livestock, dairy, veterinary, poultry, horticulture, field husbandry, soils and crops, plant protection and promotion, agricultural engineering, home economics, Credit Union Co-operative Association, agricultural education, apiculture, and agricultural societies.

Quebec.—The Department of Agriculture of Quebec comprises eleven services: rural education, rural economy, extension, animal husbandry, horticulture, field husbandry, information and research, home economics, animal health, rural engineering and the secretariat. Each service is divided into sections dealing with particular problems.

The Department also includes many other special organizations such as the Research Council, the Dairy Industry Commission, the Dairy School of St. Hyacinthe, the Provincial Extension Farm (Deschambault), the Fur Bearing Animals Extension Farm (St. Louis de Courville). The Farm Credit Bureau, the Quebec Sugar Refinery (St. Hilaire) and the Veterinary College (St. Hyacinthe) are also under the authority of the Minister of Agriculture and the Office of Rural Electrification is connected with the Provincial Executive Council.

The annual competition for the Agricultural Merit Order, organized in 1890, is held alternately in each of five regions. Each contest lasts five years and covers the various farm products; its main objective is to ascertain the personal merit of the competitors who have most distinguished themselves and can serve as examples. County Farm Improvement Contests have been conducted for more than twenty-two years and are

still very popular. Over 6,000 competitors have already benefited from these contests which promote better methods of culture designed to increase farm income. In 1955, a group of 275 farmers registered for these competitions.

The Drainage Service deals with soil improvement or land reclamation by dredging the large watercourses with its own equipment or under contract and by renting equipment at very low rates to farmers who want to improve their croplands. The Department of Agriculture also gives assistance in the form of grants towards such projects. Soil improvement measures include large drainage projects carried out by the Department and smaller projects carried out by groups of farmers with government help. In the past five years 500,000 acres of land have been improved or reclaimed and 400,000 acres of underground drainage have been completed. In 1954, 19,500 farmers benefited from help given by this Service.

Various forms of assistance are offered towards improvement of crops and livestock. An artificial insemination station operates at St. Hyacinthe for the benefit of 34 breeders' clubs, and plant breeding stations for cereal and forage crops, vegetables and small fruits are maintained in a number of localities. Trained specialists are employed in the work of controlling plant and animal pests and diseases; the main laboratories are situated at Quebec City and field laboratories are located in different districts or in schools.

Agricultural co-operation is widespread in Quebec. There are 660 co-operatives with 68,000 members and 90 agricultural societies with 30,000 members to serve local interests and organize county exhibitions. There are also 850 Cercles de Fermières (Women's Institutes) in operation with a membership of 49,000; 450 farmers' clubs with a membership of 22,000, and 140 junior farmer clubs where 3,450 young boys and girls are working on numerous practical agricultural projects.

The Farm Credit Bureau was established in 1936. During 19 years of operation the Bureau has placed at the disposal of 36,000 farmers of Quebec a sum of \$114,000,000 and has established 17,000 young men on farms.

Ontario.—The Ontario Department of Agriculture provides financial assistance and administrative services to agriculture through its Head Office, 11 branches, and three experimental farms, and through research and extension work carried on at the four educational institutions under its administration. In addition to general administration the Head Office administers the policies providing assistance to farmers and settlers in northern Ontario in connection with land breaking and clearing and with improving farms and livestock.

The Live Stock Branch promotes livestock improvement policies, licenses and examines stallions and gives support to purebred live stock associations.

The Field Crops Branch assists in the development of good cultural practices and promotes the use of improved strains of seed, the improvement of pastures, and the eradication of weeds.

The Dairy Branch provides an inspection, instruction and supervision service to all dairy factories and promotes the production of clean milk on farms.

The Farm Economics Branch conducts cost studies on agricultural production in co-operation with agricultural organizations.

The Fruit Branch enforces fruit and vegetable regulations, provides information to growers, and administers the Co-operative Marketing Loans Act.

The Co-operation and Markets Branch administers the Farm Products Marketing Act, the Ontario Food Terminal Act and the Farm Products Containers Act.

The Milk Control Board, under the Milk Industry Act, regulates and supervises the marketing of fluid milk.

The Agricultural and Horticultural Societies Branch gives assistance to agricultural and horticultural fairs and exhibitions, plowing matches and other competitions, and administers the Community Centres Act.

The Agricultural Representatives Branch carries on an educational and extension service through agricultural representatives located in all counties and districts and gives direction to 4-H Club work and the Ontario Junior Farmers' Association.

The Women's Institute Branch and Home Economics Service gives leadership and direction to organized activities of rural women.

The Statistics and Publications Branch, in co-operation with the Dominion Bureau of Statistics, provides a crop reporting service and gathers and disseminates data on crops, livestock and dairy products.

The Horticultural Experiment Station at Vineland, the Western Ontario Experimental Farm and Agricultural School at Ridgetown, the Demonstration Farm at New Liskeard, the Kemptville Agricultural School, the Ontario Agricultural College including Macdonald Institute, and the Ontario Veterinary College at Guelph, all under the administration of the Department, provide research and extension services to Ontario agriculture.

Manitoba.—The Department of Agriculture serves Manitoba through the following branches: agricultural extension; livestock; dairy; soils and crops; agricultural publications and statistics; weeds administration; co-operative services; and the provincial veterinary laboratory.

The Extension Service deals with agronomy, horticulture, poultry, agricultural engineering, beekeeping, 4-H Clubs and women's work, and has specialists devoting their attention to these subjects. Meetings, field days and short courses are held. Thirty-five agricultural representatives are located throughout the Province, each representative serving from one to five municipalities and twelve home economists serve designated areas.

The Live Stock Branch administers the Animal Husbandry Act, develops and administers policies that encourage the improvement and production of livestock, and works in close co-operation with the Veterinary Laboratory Service and the Federal Health of Animals Division in the control of livestock diseases.

The Dairy Branch administers the Dairy Act, supervises the grading of cream, inspects creameries and cheese factories, gives instruction in cheese and butter making, issues licences to makers of dairy products and to cream graders and conducts a dairy-cost study among milk producers. Extension activities include addressing meetings and preparing articles and leaflets on dairy farm problems.

The Soils and Crops Branch deals with grain and forage crops conservation and fertility and provides liaison between the Province of Manitoba and the Government of Canada in regard to PFRA projects. The Branch develops and administers policies that encourage good field crop husbandry and conservation practices.

The Agricultural Publications and Statistics Branch publishes and distributes annually approximately 100,000 bulletins, circulars, posters, leaflets, etc.

The Weeds Administration Branch directs the activities of 18 municipal weed control units comprising 70 rural municipalities engaged in eradicating deep rooted, persistent perennial weeds; supervises weed demonstrations; investigates weed problems; conducts weed surveys; and prepares weed literature, radio addresses, articles, pictures, mounted weed specimens, etc.

The Co-operative Services Branch takes care of the registration and supervision of co-operatives and credit unions and the administration of the Acts governing them. The Branch also collects and compiles statistics on co-operative activity throughout the Province. The Director is Secretary of the Co-operative Promotion Board.

The Veterinary Laboratory operates a diagnostic laboratory for animal diseases, the services of which are available to veterinarians and livestock owners.

Saskatchewan.—The Saskatchewan Department of Agriculture is organized in the following branches and services.

The Administration Branch includes the Accounting Division handling staff records, accounts and vouchers, and mail assembly; the Agricultural Records Division, handles records particularly of agricultural and horticultural societies; the Statistics Division

in co-operation with the Dominion Bureau of Statistics, collects data on crop conditions, production, marketings and income; and the Radio and Information Division broadcasts farm information daily over seven private stations.

The Agricultural Representative Service has a field staff of 37 agricultural representatives, four area supervisors and specialists in farm mechanics and visual aids. The Farm Labour Division co-ordinates farm labour requirements and services with federal agencies. The Service provides an extension field staff for all Branches of the Department as well as for the other agencies operating within the Co-operative Agricultural Extension Program. Agricultural representatives are active in all federal, provincial and university farm services. In farm labour matters co-operation is maintained with the federal Department of Labour and the National Employment Service in directing annual movements of farm labour in and out of the Province. Agricultural representatives work through Agricultural Conservation and Improvement Committees in each rural municipality and local improvement district to supply the farmer with the scientific and practical information necessary for improvement in agriculture. Agricultural committees are instrumental in studying local farm problems and in initiating agricultural improvement programs. These programs are encouraged through an Earned Assistance Program under which the Department pays one-half the cost of local group development projects.

The Animal Industry Branch includes four divisions. The Dairy Division administers dairy herd improvement programs and assists producers with management and production problems; inspects and licenses dairy manufacturing and frozen-food locker plants; and administers dairy, locker plant and margarine legislation. The Livestock Division encourages the use of suitable animals for breeding purposes by the establishment of pure-bred sire areas and by assistance in the purchase and distribution of stallions, bulls, boars and rams. It registers brands, licenses livestock dealers and agents and promotes programs on insect control, feeding and management. The Poultry Division maintains flock testing and turkey grading services; administers an approved hatchery policy, licenses produce dealers and poultry buyers, hatcheries and hatchery agents. It also assists with poultry shows and field days and otherwise promotes flock improvement. The Veterinary Division assists students in veterinary science under a scholarship plan, administers disease testing and vaccination programs and co-operates with Federal Government officials and local veterinarians in disease prevention and control.

The Conservation and Development Branch, established in the Department of Agriculture on Apr. 1, 1949, is responsible for the engineering services extended by the Department for irrigation development, usually in co-operation with the Federal Government, and for drainage programs and projects. Reclamation of land by drainage, development of misused land and under-utilized land, and construction of provincial community pastures all come within its jurisdiction. The Branch administers the Farm Implement Act and provides engineering assistance to conservation and development areas, water users' districts, and irrigation districts in connection with water control projects.

The Lands Branch, brought under the Department of Agriculture, Apr. 1, 1947, administers all Crown, school and Land Utilization Board lands except forest reserves and parks in the settled area of the Province; classifies it according to the use for which it is best suited; disposes of such lands under long term leases; collects rental for land under disposition; secures land control for land utilization projects, including the purchase and exchange of lands and Crown lands; supervises new settlement projects including land improvement by the Department and by lessees and operates provincial community pastures.

The Plant Industry Branch organizes and administers programs for crop improvement and crop protection, and advises on seed and crop improvement, soil conservation, horticultural problems, weed control and management of irrigated land. The improvement of grassland is promoted through a forage crop program. The Seed Plant Division carries on custom cleaning of forage seeds and registered cereals. The Apiary Division advises on beekeeping and honey production, and carries on continuous inspection for American foul brood and supervises grading.

Alberta.—The Alberta Department of Agriculture is organized in the following branches and services.

The Field Crops Branch deals with all matters that pertain to the utilization of soil and the production of crops. A Commissioner of Field Crops and four Supervisors administer programs and policies relating to crop improvement, soil conservation and weed control, crop protection and pest control, and horticulture. Agricultural Service Boards of municipalities carry out programs and administer regulations for which the municipality is made responsible by provincial legislation; the Department is represented on each Board.

The Live Stock Branch aids in maintaining the quality of herds and flocks by assisting farmers in securing purebred herd sires and by maintaining an artificial insemination laboratory. The work of the Branch includes the supervision of livestock feeder associations and the administration of legislation relating to stock inspection, brands, domestic animals and the sale of horned cattle.

The Dairy Branch administers the Dairymen's Act and the Frozen Food Locker Act. Grading and purchasing of raw produce by all dairy plants are under regulation, as well as standards of construction, manufacture, processing, sanitation and temperature control for dairies and frozen food lockers. A regular cow testing service is available to dairy producers and the Branch laboratory provides facilities for chemical and bacteriological analyses needed for industrial directives. Yearly cost studies and dairy farm management services are operating in the principal milk producing areas.

The Poultry Branch carries on programs for the improvement of poultry husbandry, supervises flock approval for the control of pullorum disease, maintains a practical poultry breeding plant for the distribution of breeding stock and issues all hatchery, wholesale, first receiver and truck licences for the handling of poultry products.

The Veterinary Services Branch provides the scientific diagnosis of livestock and poultry diseases through its laboratory; conducts investigations of disease conditions; gives lectures in veterinary science at the University of Alberta, Schools of Agriculture, and a large number of meetings; and actively promotes government policies aimed at reducing disease losses throughout the Province.

The Apiculture Branch administers the Bee Diseases Act which requires the registration of all beekeepers and the maintenance of an inspection service; it also administers the regulations on honey grading. The Branch carries on a considerable amount of general educational work.

The Agricultural Extension Service operates 42 offices and employs the services of 48 district agriculturists and 19 district home economists. The district agriculturists work with the farmers, assisting with their problems, and with departmental policies designed to improve the standard of agricultural practices; the district home economists provide a similar service for farm women. Bulletins are prepared dealing with agricultural and home economics topics. The Branch is responsible for the supervision of agricultural societies and, in co-operation with the Federal Department of Labour, is concerned with recruitment and placement of farm labour.

The Fur Farm Branch administers the licensing and exporting of live animals and pelts, assists fur farmers with problems pertaining to care and management and stock improvement, and operates a vaccine distemper assistance plan to control disease.

Schools of agriculture and home economics are operated at Olds, Vermilion and Fairview (see p. 408).

A Radio and Information Branch, established on Apr. 1, 1953, provides a radio program consisting of five broadcasts a week over seven Alberta stations. Weekly information bulletins are prepared for distribution to press and radio.

British Columbia.—The Department of Agriculture has four main branches. The Administrative Branch is responsible for the general direction of agricultural policies, administration of legislation affecting agriculture and for the compilation of reports and

publications. This Branch also maintains direct supervision of the Field Crops, Soil Survey, Plant Pathology, Entomology, Apiary, Markets and Statistics, Farmers' Institutes and Women's Institutes Branches.

The Livestock Branch engages in the promotion and supervision of the livestock industry and provides veterinary services affecting disease control regulations as well as supervising stock brands, inspection of dairy and fur farm premises, and inspection of beef grading. The Branch also supervises the operations of the Dairy Branch in the inspection of commercial dairy premises. Officials are stationed at 11 centres throughout the Province.

The Horticulture Branch supervises fruit, vegetable and seed production, and provides advice on plant diseases and insect pest control. The Branch maintains field offices at 11 points in the southerly section of the Province.

The Agricultural Development and Extension Branch offers general information services to farmers through 23 offices which cover all major farming districts. In addition this Branch provides agricultural engineering service, supervision of the Government land clearing program, farm labour services and promotion of junior club projects. The Poultry Branch, offering extension services to the poultry industry, is also a part of this Branch.

Subsection 2.—Agricultural Colleges and Schools

All provinces provide facilities for training in agricultural science at university level. Such colleges are administered by either the Department of Agriculture or the Department of Education of the respective province.

Newfoundland.—There are no agricultural colleges in the Province. The Agriculture Division of the Department of Mines and Resources however provides a number of scholarships annually for young men to attend agricultural colleges on the mainland of Canada.

Prince Edward Island.—The two year course in scientific agriculture offered at Prince of Wales College, Charlottetown, is designed for students preparing to enter third year at Macdonald College, Que.

In the Vocational School the short courses offered in agriculture are planned to provide not only knowledge and skill but to develop in the student a sense of the dignity and importance of agriculture as a calling and an understanding of the importance of the industry to the Province.

Nova Scotia.—Nova Scotia Agricultural College at Truro offers three courses: the first two years of a course leading to the degree of Bachelor of Science in Agriculture; a two year course in general agriculture; and a two year course in vocational agriculture. In addition the College assists in conducting short courses at various provincial centres, supports Folk Schools and gives leadership and direction to the 4-H Club organizations. Tuition is free for Canadian students.

New Brunswick.—The Province's four Agricultural Schools are located at Woodstock, Fredericton, St. Joseph and St. Basile. Two year agricultural courses extending over five months each year are offered at St. Joseph, Fredericton and St. Basile and at Woodstock a three year course is conducted. The curriculum includes training in all phases of agriculture, shop and general academic work. Home economics courses of 10 months are offered at Woodstock and St. Joseph in conjunction with the agricultural courses.

Quebec.—Courses in agricultural schools in the Province include a four year university course leading to a degree of Bachelor of Science in Agriculture at the following universities: Laval Faculty of Agriculture (Ste. Anne de la Pocatière); L'Institut Agricole d'Oka (affiliated with the University of Montreal); and McGill Faculty of Agriculture (Macdonald College). At the Provincial Veterinary School (St. Hyacinthe), affiliated with the University

of Montreal, a four year course is offered leading to a degree of doctor in veterinary medicine. There are also nine secondary agricultural schools throughout the Province: 10 regional schools and six orphanages offering courses in agriculture. More than 1,500 students, the great majority of whom are sons of farmers, attend these intermediate and regional schools of agriculture and in the orphanages 150 pupils follow practical agricultural courses. A farm is always annexed to the school for practical training and specialists give instruction on the maple sugar industry, farm mechanics, co-operatives, plant protection, veterinary hygiene, aviculture, marketing and silviculture. School co-operatives and clubs are organized and directed by the pupils under the supervision of their professors. Household science training for the daughters of farmers and settlers is given in five of these schools; during the summer of 1954, 390 girls attended these courses which extend over the four summer months of two consecutive years.

Ontario.—The two year course of the Ontario Agricultural College for the Associate Diploma in Agriculture is planned to provide basic training of personnel in agriculture. Young persons interested in making agriculture their vocation study the application of science to agricultural practice and also receive training for rural citizenship.

The four year course for the degree of Bachelor of Science in Agriculture is designed for fundamental education in the science of agriculture. A sound training is provided for farming as a profession, for entrance into government extension and allied agricultural services, agricultural industry, teaching, and for those who wish to proceed to graduate studies for the Master's and Doctorate degrees.

Graduate courses are also offered leading to the degree of Master of Science in Agriculture. Graduate students are enrolled in a department or departments of the Ontario Agricultural College conjointly with a department or departments of the University of Toronto for advanced courses of study and training in experimentation and scientific investigation. M.S.A. graduates may go into teaching, research, or for further post-graduate study for a Doctorate degree.

Macdonald Institute offers young women a one year course of practical training in the art and science of homemaking. This leads to a diploma of merit but gives no professional standing. A four year professional course is also available leading to a Bachelor of Household Science degree granted by the University of Toronto. University matriculation standing is necessary to enter the four year course.

The Ontario Veterinary College offers a course leading to the degree of Doctor of Veterinary Medicine. It is a five year course with two four-month periods of regulated summer internship. In addition to its function as a teaching institution, the College is a centre for research into the diseases of animals and provides free consultation for veterinary surgeons in practice as well as extension services in the interests of the livestock industry.

The Kemptville Agricultural School offers diploma courses as follows: a two year diploma course in agriculture (two terms of six months each) giving practical training in modern farm methods designed primarily for young people who wish to farm but serving also as a preparation for many other occupations closely connected with agriculture (stress is laid on the development of community leadership); a one year diploma course (six month session) leading to a diploma in homemaking and qualification for the less exacting positions in fields of home economics; a two year diploma course (two terms of six months each) for girls wishing to prepare for positions in the tourist trade, food services, sewing centres and other fields of home economics; a three month winter course for all dairy apprentices leading to the Dairy School Diploma required for certified buttermakers, cheesemakers and operators of dairy manufacturing plants.

A 300 acre school farm and residence life are features of the Kemptville Agricultural School.

Western Ontario Agricultural School offers a practical course intended for young men who propose to return to farming. It consists of two winter courses of 20 weeks each, starting late in October and ending late in March. All subjects relating to agriculture are included in the curriculum.

Manitoba.—The Faculty of Agriculture and Home Economics of the University of Manitoba offers degree courses in agriculture and home economics as well as a two year, sub-collegiate diploma course in agriculture. Practical one season courses in agriculture and homemaking are also given at the Brandon Agricultural and Homemaking School. Graduates in agriculture from this School are admitted to the second year of the diploma course at the University.

Saskatchewan.—Saskatchewan offers a degree course in agriculture designed to meet the needs of those who intend to teach agriculture in secondary schools or colleges, to engage in research or administrative work, or to farm. Specialization is possible with permission of the faculty. Provision is made for combined courses in agriculture and arts or commerce. Postgraduate courses are available.

The Saskatchewan School of Agriculture offers a practical course intended to give sound training in farm practice and also to train young men to become rural leaders.

All courses leading to a degree in home economics require four years. The prescribed course of studies for the first two years is the same for all pupils but in the third and fourth years four types are offered: (1) for teachers, (2) for dietitians, (3) general, and (4) additional specializations. A combined course leading to a degree in arts and science and in home economics requires at least five years.

Alberta.—The University of Alberta offers a four year degree course in agriculture to students with senior matriculation or its equivalent. Students may elect a general program or major in a wide range of special courses in the fields of animal science, economics, entomology, dairying, plant science, and soils. Graduate work at the Master's level is offered in all departments and at the Doctorate level in some.

The Alberta Schools of Agriculture and Home Economics, located at Olds, Vermilion and Fairview, offer practical two year courses in agriculture and homemaking. The purpose of the schools is to train young men for farming and young women for homemaking.

The regular course in agriculture and in home economics requires two terms, each extending from late October to early April. A special two-in-one course of one term is offered to students who have completed 70 high school credits. These schools accept students who have reached 16 years of age. There are no academic requirements for regular students, although Grade VIII is desirable, and no tuition fees for residents of Alberta. Living accommodation is provided in modern dormitories with dining-room, auditorium and gymnasium facilities.

During the summer months the schools are used for agricultural meetings and conferences of organizations that are connected with agriculture. During the month of July, leadership courses, 4-H Club gatherings, farm camps and other events keep the facilities in constant operation.

British Columbia.—The Faculty of Agriculture at the University of British Columbia offers a four year general degree course in agriculture and a five year honours course. In the honours course there are 15 different fields in which a student may specialize. Work is also offered by the Faculty of Agriculture in the Faculty of Graduate Studies through which a student may proceed to the degrees of Master of Science in Agriculture and Master of Science; in a limited number of fields, work is offered at the Doctorate level. The Faculty also offers a one year or two year diploma course in occupational agriculture, adaptable to the needs of individual students.

In co-operation with various branches of the provincial Department of Agriculture and under the auspices of the University Extension Department, the Faculty of Agriculture also offers a number of short courses which vary in length from one or two days to several weeks.

Section 3.—Agricultural Irrigation and Land Conservation

Subsection 1.—Federal Projects*

PRAIRIE FARM REHABILITATION ACT

The Prairie Farm Rehabilitation Act (R.S.C. 1952, c. 213) is a rehabilitation program conceived by Parliament in 1935 to meet the problems of drought and soil drifting adversely affecting agriculture on the Canadian prairies. Existing agencies of the Government of Canada were assisted, with PFRA funds, to expand their activities in providing leadership in the immediate drought problems. In particular cultural investigations were carried out by the Experimental Farms Service to ensure the most economic use of the limited supply of soil moisture for crop production and the prevention of soil drifting farm lands that were a menace to surrounding good land. A program of water conservation to meet immediate needs was also initiated in 1935. Other services, such as the Economics Division, were assisted where special knowledge was required for rehabilitation measures.

The major activities of the PFRA Administration, with Headquarters at Regina, Sask., include the construction for the Government of Canada of all projects concerned with water conservation and land utilization in the Prairie Provinces. The five principal phases of investigational study in the field of engineering include surveys (exploration), soil mechanics, drainage, hydrology and design. These studies are undertaken by PFRA to gather the fundamental groundwork of technical and other basic information that is required before construction of any project is undertaken.

Water Conservation

Individual and Community Projects.—PFRA provides engineering and financial assistance to farmers in the construction of water conservation works as a rehabilitation measure within drought areas of the three Prairie Provinces. The amount of financial assistance awarded is largely dependent upon the type and size of the project contemplated. At all times PFRA policy is to provide assistance to farmers to rehabilitate themselves. Authority to proceed with construction is secured through the respective provincial water rights departments. Water conservation projects in this category are classified either as "individual farm projects" or as "community projects" undertaken by a group of farmers.

Individual Farm Projects.—During 20 years of operation PFRA has provided assistance to farmers to construct 51,691 individual farm projects in the form of dugouts and small dams, many of which are suitable for irrigation. The objective is to provide adequate water storage facilities where water shortages exist and to assure dependable water supplies through irrigation for domestic requirements, for stock watering and for the production of livestock feed.

The construction of these projects has extended the benefits of water widely throughout the dry areas: as a result a much larger number of farmers have been rehabilitated than would have been possible through the construction of large schemes on well defined watersheds and without the movement of settlers from their present holdings. The maintenance of valuable livestock herds has been assured through dependable water supplies on farm stock watering projects and through the development of small irrigation schemes.

Community Projects.—The development of community projects is necessarily confined within the narrow reaches of well defined watersheds where sufficient water resources are available. Where a group of farmers organizes a water users' association or a rural municipality provides leadership in an irrigation or water storage project, PFRA co-operates with the local body. The usual procedure is for the Government of Canada to assume the capital cost of storage and connecting works and the provincial body to assume the responsibility for the distribution of water to the land or along the watershed. The local body also undertakes maintenance and operation.

* Prepared under the direction of Dr. J. G. Taggart, C.B.E., Deputy Minister of Agriculture, by G. J. Matte, Associate Director of Rehabilitation.

To Mar. 31, 1955 PFRA provided the necessary assistance to construct 325 community projects, the majority of which are located on six watersheds originating in the three Prairie Provinces. The purpose of these projects is to conserve the surplus spring runoff water to supplement short supply later in the year. By maintaining stream flows farmers are assured of dependable water supplies for livestock and for irrigation use. In addition community projects provide homes for farmers moved from submarginal areas to where they can be assured a livelihood.

PFRA's responsibility for the development of large community irrigation schemes terminates with the construction of primary reservoirs and connecting canals. In special cases where the need for early returns to farmers proved imminent, PFRA has assisted further in the development of the irrigable land and has maintained a constant surveillance of the project's operations and progress. At times agreement has been reached between PFRA and the provincial government concerned whereby PFRA provides engineering and financial assistance to construct primary works and the province agrees to assist with the development of the irrigable area. Such an agreement is in effect in connection with sections of the Swift Current Irrigation project being developed in Saskatchewan.

Major Irrigation Projects.—During recent years PFRA has administered special votes by Parliament for the construction of water conservation and development projects that involve large expenditures of money. These undertakings have extended PFRA administration beyond the boundaries of the PFRA area in the three Prairie Provinces into British Columbia.

St. Mary Irrigation Project.—The St. Mary Irrigation project has been undertaken by agreement between the Government of Canada and the Province of Alberta. The Government of Canada has agreed to construct the main supply reservoirs and connecting works. The Province of Alberta has undertaken the responsibility for construction of the auxiliary reservoirs and distribution system from the main works to the land (*see also* p. 415).

The St. Mary River System is by far the most important irrigation project undertaken in Canada and, when completed, will irrigate an area of approximately 510,000 acres. Construction of the St. Mary Dam, key structure on the whole project, was completed in 1951. It stands 195 feet high and is 2,536 feet wide and creates a reservoir capable of storing 320,000 acre-feet of water. Approximately 200 miles of main canal have been built and 10,000 acres of land have been developed together with over 100 miles of the distribution canal system. Further lands are under development.

South Saskatchewan River Development.—This development in central Saskatchewan is a proposed multi-purpose project to be used for developing power and irrigation, the irrigable area lying between the town of Elbow and the city of Saskatoon. The key structure on the project will be a dam on the South Saskatchewan River located at a point midway between the towns of Outlook and Elbow.

The plan is to stabilize agriculture in the south central area of the Province where prolonged droughts have created serious economic problems for over 50,000 farmers. Full use will be made of the river's control, power, urban water supply and recreational benefits.

Bow River Irrigation Project.—The Bow River project was purchased by the Government of Canada in 1950 from the Canada Land and Irrigation Company, a private British interest. Development of this project will ensure water supply to 100,000 acres of land at present irrigated and will bring an additional 140,000 acres "under the ditch". Construction activities and the repair and enlargement of old structures have been going on rapidly. Forty-three thousand acres of new land have been brought under irrigation since 1950 and settlement is progressing rapidly.

Red Deer Irrigation Project.—The proposed Red Deer River development concerns the irrigation of an estimated 400,000 acres of land located in the east central part of Alberta. The project will consist of a dam on the Red Deer River at Ardley and about 100 miles of main canal to two main reservoirs—Craig Lake and Hamilton Lake. The dam

will contain power installations to produce power for pumping and also for sale commercially. An estimated 20,000,000 kwh. of water power will be available for sale when power is fully developed.

Irrigation Development in British Columbia.—Irrigation development in British Columbia has been undertaken in connection with the Veterans' Land Act and at the request of the British Columbia Government. Three projects (the Chase irrigation project and the Johnstone Western Canada ranching projects No. 1 and No. 2) have been completed within the South Thompson Valley area. On these projects 809 acres of land have been developed for irrigation for the benefit of approximately 40 veterans of World War II.

In the Okanagan Valley three new projects have been completed, the Westbank irrigation project and the Bankhead project near Kelowna, and the Cawston Benches project located east of the town of Keremeos. The three projects irrigate 1,782 acres of land and provide locations for 170 veterans of the second world war. The Penticton West Benches project, irrigating approximately 200 acres and accommodating 97 veterans on small holdings, was completed in 1953.

Intensive farming is practised in the Okanagan and South Thompson Valleys. The land developed for irrigation by PFRA is used mainly for the growing of small fruits and vegetables and for dairying. New projects are constantly being investigated as potential development areas.

Major Reclamation Projects.—*Riding Mountain Reclamation Project.*—At the request of the Manitoba Government extensive investigations have been undertaken by PFRA in the Riding Mountain area. A serious flood problem exists on a number of streams flowing off the north and east slopes of Riding Mountain and Duck Mountain, causing damage to a large area of valuable agricultural land. PFRA was asked to devise and carry out a plan to relieve a land area of over 252,000 acres affected by flooding.

The cost of reclamation in the area is borne jointly by the Government of Canada and the Government of Manitoba. Construction work, centred along Edwards and Mink Creeks in the Riding Mountain area, consisted of clearing and dyking stream channels and straightening the alignment of channels by building stream cutoffs and diversions. The larger portion of the work on these two streams was completed in 1951.

Stream bank erosion studies are being continued in the Riding Mountain area to stabilize stream banks and minimize erosion problems but it will be a number of years before definite results can be presented.

Assiniboine River Project.—This project is also being undertaken by PFRA, at request of the Manitoba Government, to prevent flooding on the Assiniboine River, particularly between Brandon and Virden and between Portage la Prairie and Headling where thousands of acres of valuable agricultural land have been inundated repeatedly.

All the studies undertaken are in conjunction with the Red River Basin investigation currently being carried out. Several alternative plans are being investigated to divert excess water from the Assiniboine River during flood stages. Detailed study is being given to water runoff data in the Assiniboine River Drainage Basin and the possibility of building water storage works on the headwaters of the Assiniboine River.

Saskatchewan River Reclamation Project.—Surveys and investigations were made by PFRA to determine the possibility of successfully reclaiming land for agriculture in the Pasquia area of the Saskatchewan River delta region near the town of The Pas in Manitoba. As a result an agreement was reached on Apr. 17, 1953 between the Government of Canada and the Province of Manitoba for the construction of the necessary reclamation works to protect the area from flooding and to settle about 96,000 acres of suitable land; the Government of Canada to assume the cost of building the main protective works, and the Province the costs of settlement, maintenance of works, and internal drainage. One-half of the reclaimed land is to be reserved for the resettlement of farmers from drought areas and the remainder is to be sold. Part of the proceeds from the sale of the lands will go to the

Federal Government as a partial reimbursement of the costs of building the main protective works. Construction work began early in 1953 but will take three years to complete the dykes, drains and diversion of streams.

Lillooet Valley Reclamation Project.—This project was undertaken upon agreement between the Government of Canada, the Government of British Columbia and the Pemberton Valley Reclamation District and is located in the Lillooet River Valley above and below the town of Pemberton. Its objective is to protect lands now under cultivation from flooding and to reclaim additional lands by dyking and drainage. The land so far reclaimed amounts to 14,000 acres, which allowed farmers in the district to increase their holdings and permits the settlement of hundreds of additional inhabitants.

Land Utilization

In addition to cultivation and water conservation activities rehabilitation of drought areas involves the conversion of large tracts of land (proved unsuitable for crop production) to livestock production through cultivation of a permanent grass cover, and the relocation of farmers residing thereon. To this end PFRA's Land Utilization Program has constructed 62 operating pasture units, resulting in the reclamation of 1,696,900 acres of submarginal land. During the fiscal year ended Mar. 31, 1955, summer grazing was provided for 106,278 head of livestock owned by 5,959 patrons living on lands adjacent to these pastures.

An extensive pasture improvement program is in effect on all pastures and is begun as soon as new areas are enclosed. This policy has more than doubled the 1938 average carrying capacity on pasture land. The improvement policies most extensively practised in all pastures are: (1) regrassing—since 1938 approximately 190,548 acres of land in community pastures have been regrassed; (2) development of stock watering sites—to Mar. 31, 1955, over 1,000 stock watering dams, dugouts and wells have been constructed in community pastures; and (3) pasture management and controlled grazing.

MARITIME MARSHLANDS REHABILITATION ACT

The marshlands of Prince Edward Island, Nova Scotia and New Brunswick are among the more productive soils in Canada when protected and properly cultivated. They are composed of deposits laid down by tidal waters and are for the most part adjacent to the Bay of Fundy.

The initial areas were reclaimed as early as 1630 and since that time about 80,000 acres have been protected by dykes and aboiteaux. These structures prevented flooding by tide water and permitted cultivation after drainage had been carried out.

Through a variety of circumstances—loss of cattle markets, loss of hay markets and the increase in labour costs—maintenance of the protective structures was not adequately carried out and deterioration resulted. Because the marshlands, when protected, have an important role in the agricultural economy of the provinces concerned, the Government of Canada and the Provincial Governments of Nova Scotia and New Brunswick passed legislation permitting a program of reclamation and rehabilitation of these lands. The federal Act, the Maritime Marshlands Rehabilitation Act, was passed in 1948 and complementary provincial marshland reclamation Acts were passed by the Nova Scotia and New Brunswick Governments in 1949. These Acts permitted agreements to be signed whereby the Government of Canada would construct or reconstruct the protective works, normally called dykes, aboiteaux and breakwaters, and would assume the responsibility of maintaining these works until they were turned over to the Provinces. The Federal Government is responsible also for any engineering work in connection with the complete program. The Provinces are responsible for the organization of the marsh areas, the fresh-water drainage and acquisition of any land required and for the initiation and follow-up of a suitable land-use program. Owing to the small area of marshland in Prince Edward Island no provincial legislation was considered necessary in that Province.

By Mar. 31, 1955 the Provinces had asked to have 138 areas considered for reclamation purposes. These comprised 35,045 acres of marshland in New Brunswick (including 8,058 salt or unprotected marsh), 39,829 acres in Nova Scotia (including 5,486.5 salt or unprotected marsh) and 275 acres in Prince Edward Island. The 75,149 acres of marshland in the three Provinces constitute an integral part of their estimated 436,000 acres of farm land.

Investigations to determine the advisability of constructing a large structure to eliminate the need for many miles of dyke and many aboiteaux were being carried out on the Annapolis River in Nova Scotia and on the Tantrammar and Shepody Rivers in New Brunswick. Construction on the Shepody River project was started in 1953 and is scheduled for completion in the fiscal year 1955-56.

Subsection 2.—Provincial Projects

Saskatchewan.*—The Conservation and Development Branch, established in 1947, was made responsible for: administration of water rights; irrigation development, engineering and structures; flood control and drainage; restoration of abandoned, under-utilized and misused lands; and construction of provincial community pastures outside the area covered by the agreement with PFRA and not provided for in the agreement with the Federal Government.

The Provincial Department of Agriculture's conservation and development activity in the field of agricultural rehabilitation and reclamation is based on co-operation with the Federal Government's PFRA program with which a close working arrangement is maintained. Following is a summary of the activities of the Saskatchewan Department of Agriculture as at Dec. 31, 1954:—

Water Rights.—Under the Water Rights Act 5,439 water storage projects for domestic irrigation, municipal and industrial purposes covering 429,708 acre-feet of water have been licensed, and there are 111 gauging stations being maintained to complete hydro-metric surveys and a surface water inventory. The Water Rights Office represents the Province of Saskatchewan on the engineering committee of the International Joint Commission and on the Prairie Provinces Water Board.

Irrigation Development.—By the end of 1954, 112,070 acres of topographic surveys and 148 miles of strip topographic surveys were completed on irrigation projects; 285 miles of ditch were built and 134 miles maintained; 1,317 structures were installed and 4,993 acres were levelled.

Drainage Development.—Topographic surveys covered 123,804 acres and 4,211 miles of strip topographic surveys were completed on drainage projects; 372 miles of ditch and 154 miles of road were built and 126 miles of ditch maintained; 301 structures were installed in drainage systems.

Development of Under-utilized and Misused Lands.—A total of 43,387 acres of tame perennial forage crops were seeded, mostly for fodder production; and 551 miles of fence were built or rebuilt in the establishment of departmental, municipal or co-operative pastures.

Miscellaneous Project Work.—Such projects included: regrassing about 14,775 acres; planting 545,900 trees; constructing 112 dams and dugouts (with the co-operation of groups of farmers in the area of northern Saskatchewan outside the boundaries of the PFRA program); and organizing 32 conservation areas covering 2,961,587 acres, in order to help local farmers install and maintain drainage and other conservation works.

* Prepared under the direction of W. H. Horner, Deputy Minister of Agriculture, Sask.

Pasture Development.—Through the Lands Branch of the Provincial Department of Agriculture the Province has transferred title to 1,061,749 acres and leased without change another 385,646 acres of grazing land to PFRA for the development of community pastures. Outside the PFRA program, the Province developed an improved 638,359 acres, making a total of 2,085,754 acres in all, available as community pasture land. The 78 pastures outside the PFRA program are operated by co-operative associations, by municipalities or by the Provincial Department of Agriculture; those operated by the Province provided grazing in 1954 for 11,237 cattle owned by 710 local farmers.

Development of Land for Cultivation.—Crown lands, either under cultivation or suitable for cultivation, are leased for a 33 year period. The Province may either reimburse farmers in cash for the cost of clearing and breaking virgin land or the farmers may retain crop shares equivalent in value to costs sustained. To Mar. 31, 1955 the investment of the Province, recorded by the Lands Branch of the Provincial Department of Agriculture, for land clearing and breaking amounted to \$3,939,101 and included work done in six settlement projects involving 282 farm units where 50 acres were cleared and broken before the land was leased.

Alberta.*—Sect. 69 of the Alberta Water Resources Act gives the Minister of the Department of Agriculture wide powers to investigate the water resources of the Province, and extensive surveys have been carried out to determine the distribution and extent of the available water supplied in the Province and the most beneficial use for irrigation, water power and other purposes. The Water Resources Branch of the Provincial Department of Agriculture carries out the administration of licensing of water power projects and is responsible for administering the construction work in several irrigation projects. The Branch handles licensing of irrigation projects and allocation of water for domestic and irrigation purposes. Other work includes the administration of drainage districts, co-operation on the Peace River Dug-out Project and deals with river protection projects where flooding is a problem.

In more recent years much of this work has been carried out by the Federal Government in co-operation with the Provincial Government. Stream measurement is now being done by the Hydrometric Service of the federal Department of Northern Affairs and National Resources and irrigation surveys are carried out largely by the Water Development Organization under the Prairie Farm Rehabilitation Administration. The Engineering and Water Resources Branch of the federal Department of Northern Affairs and National Resources and the power companies operating in the Province also assist in the program.

The Calgary Power Company has completed a fairly extensive and detailed water power survey of the Bow River and its tributaries and as a result the Company has constructed a number of water power reservoirs and power stations on the stream. Also, in co-operation with the Provincial Government, the Company has made a preliminary survey of Lesser Slave River and the Athabasca River from Athabasca to McMurray and is now engaged in a study on the headwaters of the North Saskatchewan River.

By Order in Council, Feb. 17, 1941 the St. Mary and Milk River Water Development Committee was set up to investigate and report on the many phases of irrigation development of southern Alberta (including water supplies available to Canada from the Waterton, Belly, St. Mary and Milk Rivers); the most feasible plan to put these waters to the most beneficial use; the benefits that such water development projects would confer on federal and provincial interests; the allocation of costs; and methods that might be adopted to finance such developments. The Committee completed a very thorough investigation and published a full and comprehensive report, not only on the projects on the international streams, but also on other projects in Alberta.

* Prepared by J. L. Reid, Secretary, Alberta Power Commission, Edmonton, Alta.

The allocation of water to the major irrigation projects in Alberta, as approved by the Prairie Provinces Water Board, are as follows:—

<i>Project</i>	<i>Acres Irrigable</i>	<i>Water Allocation in Acre-feet</i>
St. Mary-Milk Rivers Development.....	465,000	796,000
Western Irrigation District.....	50,000	85,700
Eastern Irrigation District.....	281,000	562,000
Bow River Irrigation Development.....	240,000	478,534
United Irrigation District.....	34,000	51,000
Lethbridge Northern District.....	96,135	150,000
Mountain View Irrigation District.....	3,600	6,000
Aetna Irrigation District.....	7,300	13,000
Leavitt Irrigation District.....	4,400	7,000
Macleod Irrigation District.....	5,000	8,000
Private Projects.....	70,000	80,000
TOTALS.....	1,256,435	2,237,234

The following paragraphs outline development during the 1954-55 season:—

St. Mary-Milk Rivers Development.—With the completion of the Chin Dam all 1953-54 contracts have now been completed. Owing to the construction season being short only two of the new contracts have been completed and the remainder of this work will be carried into the 1955 season. During 1955-56 all construction under the low line canal and a major portion of the part already constructed including the main canal from Ridge to Seven Persons is expected to be turned over to the appropriate Crown corporation. Expenditure will be \$1,951,000 to Mar. 31, 1955.

William Pearce Irrigation Project.—Surveys and studies were continued during the 1954-55 season and included a head water storage survey.

Bow River Development Project.—The construction phase of this project was started in the late autumn of 1953 when the contract covering Distributary "A" was let in the amount of \$116,838 and was completed in July 1954. The irrigable area of this distributary system is approximately 6,000 acres and is now ready for operation. In addition the following contracts were let: (1) Distributary "B" at a cost of \$247,416; (2) Distributary "C", \$94,944; (3) Bridge, \$93,255; and (4) Headquarters building at \$18,904, making a total of \$454,519.

The irrigable acreage under Distributaries "A", "B" and "C" is approximately 22,000 acres. This area will be ready for testing and operation by August 1955. Total expenditure to Mar. 31, 1955 was \$340,000.

Macleod Irrigation District.—Some irrigation was done on this project and the intake works were improved. The amount expended by the Provincial Government to Mar. 31, 1955 was \$6,260.

Heart River Project.—The extension of the Heart River Project resulted in water being made available to the town of McLennan; this makes water available to the Falher-Girouxville area also. The amount expended was \$45,000 to Mar. 31, 1955.

Lake Level Stabilization.—Most of the lakes in the central part of the Province reached an extremely high level owing to a high runoff cycle and a wet season in which very little evaporation took place. A control structure was placed at the outlet of Hay Lakes in Township 113, west of the 6th Meridian in the northwest corner of the Province.

River Protection and Stream Control.—Work was done on the following rivers and creeks: Milk River erosion near Warner; Crowsnest River channel improvement at Blairmore; Pincher Creek channel improvement at Pincher Creek; Old Man River channel improvement near Fort Macleod; Highwood River protection works at High River; Bow River protection work at Canmore; and the Bow River purchase of Lowery Gardens to remove residents from the flood plane at Calgary. Expenditure to Mar. 31, 1955 was \$190,099.

British Columbia.*—About 18 p.c. of the arable land in British Columbia is under cultivation and nearly all the grazing area is being utilized. The 1,200,000 acres developed give a ratio of approximately one acre per person. Within this arable area there exist an estimated 167,300 acres of irrigated land; the total acreage of irrigable land in British Columbia is estimated at 181,974 acres. About two-thirds of the irrigated area is made up of individual projects and the other third is served by the larger irrigation projects listed in Table 5.

* Prepared by A. F. Paget, Comptroller of Water Rights, Department of Lands and Forests, Victoria, B.C.

Section 4.—Statistics of Agriculture*

The collection, compilation and publication of statistics relating to agriculture is a responsibility of the Dominion Bureau of Statistics. Valuable information is obtained through the Decennial Census of Canada and the Census of the Prairie Provinces. Complete details of the 1951 Census of Agriculture may be found in Volume VI of the *Census of Canada, 1951*.†

The Bureau also collects and publishes primary and secondary statistics of agriculture on an annual and monthly basis. The primary statistics relate mainly to the reporting of crop conditions, crop and livestock estimates, values of farm lands, wages of farm labour and prices received by farmers for their products. The secondary statistics relate to the marketing of grain and livestock, dairying, milling and sugar industries and cold storage holdings.

In the collection of annual and monthly statistics the Federal Department of Agriculture and the Provincial Departments of Agriculture, as well as such agencies as the Board of Grain Commissioners and the Canadian Wheat Board, co-operate with the Bureau. Many thousands of farmers throughout Canada also send in reports voluntarily.

* Revised in the Agriculture Division, Dominion Bureau of Statistics.

† Copies obtainable from the Dominion Statistician or the Queen's Printer, Ottawa, Ont.

The figures for 1950 to 1954 (except for 1951 Census data) contained in this Section do not include estimates for Newfoundland. Agriculture plays a relatively minor part in Newfoundland's economy, commercial production of most products being quite small.

Subsection 1.—Cash Income from the Sale of Farm Products 1954

It is estimated that during 1954 Canada's farm cash income from the sale of farm products (excluding Newfoundland) amounted to \$2,377,800,000; this includes participation payments made on previous years' western grain crops. This estimate is 14.3 p.c. below the revised figures of \$2,776,000,000 for 1953 and 16.5 p.c. below the alltime high of \$2,849,300,000 established in 1952. Nearly all the reduction in farm cash income took place in the Prairie Provinces and was the result largely of a substantial decrease in the marketings of grains, particularly wheat, and lower prices for both wheat and barley. The declines in these provinces ranged from about 15 p.c. in Manitoba to approximately 36 p.c. in Saskatchewan. Income in Ontario, the only other province with reduced receipts in 1954, decreased by only 2 p.c. Gains were registered for the remaining provinces ranging from less than 1 p.c. in British Columbia to about 5 p.c. in Prince Edward Island. Supplementary payments made to western farmers under the provisions of the Prairie Farm Assistance Act amounted to \$2,400,000 in 1954 as compared with \$1,600,000 in 1953 and \$5,100,000 in 1952.

Field Crops.—The decline in income from the sale of wheat from \$654,100,000 in 1953 to \$322,600,000 in 1954 constituted the greatest decline for any single commodity. Farmers' deliveries during the year totalled about 288,000,000 bu., little more than one-half the amount delivered during the previous year. Wheat prices too were below the 1953 level. Wheat participation payments, which were \$97,400,000 in 1954 compared with \$125,400,000 in 1953 included the 10.9 cts. per bushel final payment on marketings of the 1952 crop and the 10 cts. per bushel interim payment on marketings of the 1953 crop. Income from the sale of coarse grains was also substantially below that of a year earlier as a result of lower marketings of oats and barley and lower prices for barley. In addition participation payments for these two grains were down significantly in 1954. Smaller returns were also obtained from the sale of rye, corn, potatoes, vegetables and sugar beets, but some increase in income was realized from the sale of flaxseed, hay, tobacco, and clover and grass seed.

Livestock.—In contrast to the generally lower income from the sale of field crops receipts from the sale of livestock during 1954 amounted to \$705,100,000, about 7 p.c. above the previous year's estimate. Increased marketings of all classes of livestock contributed to this gain as well as the higher prices received for hogs. Prices for other classes of livestock averaged below the 1953 level.

Dairy Products.—Income from dairy products in 1954 is estimated at a new record of \$426,200,000 or 2.5 p.c. above the previous high level of \$415,900,000 established a year earlier. Increased production more than offset slightly lower prices and is attributed to a continued increase in the milk cow population and excellent pasture conditions throughout most of the growing season.

Poultry and Eggs.—A decrease of about 18 p.c. in egg sales receipts represented the greatest reduction in income of any of the livestock products. Substantially lower prices more than offset high marketings to give a total income of \$112,200,000 in 1954 as compared with \$136,300,000 in 1953. Income from poultry meat however at \$136,500,000 was slightly above the 1953 receipts of \$134,200,000.

6.—Cash Income from the Sale of Farm Products by Source 1952-54

(Exclusive of Newfoundland)

NOTE.—Figures for 1926-48 will be found in DBS *Reference Paper No. 25* (Part II). Figures for 1949 are given in the 1952-53 Year Book, p. 407 and for 1950-51 in the 1954 edition, p. 402.

Net Income of Farm Operators from Farming Operations 1954.—The year 1954 witnessed a sharp decline in farm net income largely as a result of poor crops in Western Canada. Compared with the estimate for 1953 of \$1,699,600,000, the 1954 figure of \$1,125,600,000 is down by about 33 p.c. The record high level of \$2,154,500,000 was reached in 1951 and the average for the postwar years (1946-1953) was \$1,611,600,000.

The reduction in the 1954 net income was the result of a decrease of approximately 19 p.c. in gross farm income, offsetting by far a decline of about 2 p.c. in farm operating expenses and depreciation charges. Gross farm income in 1954 at \$2,624,700,000 compares with the all time high of \$3,578,500,000 reached in 1951 and the 1953 estimate of \$3,226,700,000. The drop from the 1953 level was the result of very substantial declines in cash income from the sale of farm products and the value of year-end changes in farm-held inventories of grains. Income in kind for 1954 decreased by about 2 p.c. from 1953; this item includes the value of that produce grown by farm operators and consumed in the farm home plus an imputed rental value of the farm dwelling.

Value of Farm Lands.—The average value of occupied farm lands in Canada for 1954 is reported at \$50 per acre as compared with \$51 per acre for 1953. This decline in the average farm land value for Canada is the first since 1940. The direction of change in the provincial farm land values was not uniform for all provinces. Lower land values were reported for the Prairie Provinces, Prince Edward Island and New Brunswick. In Nova Scotia no change was recorded. For the remaining provinces higher values prevailed.

10.—Average Values per Acre of Occupied Farm Lands by Province, Selected Years 1910-54

NOTE.—Figures include unimproved lands and buildings.

¹ The Canada average is determined by weighting the provincial averages by the area of occupied farm land in each province.

Subsection 2.—Volume of Agricultural Production

The index of physical volume of agricultural production in Canada (excluding Newfoundland) for 1954 is estimated at 114.3 (1935-39=100). This figure compares with the revised index of 156.2 for 1953 and the alltime high of 166.0 established in 1952.

The drop in the index of approximately 42 points, or about 27 p.c., between 1953 and 1954 was largely attributable to the much smaller western grain crops, particularly wheat. To a lesser degree a reduced potato crop also contributed to the decline. Offsetting these reductions in output to some extent were gains in production recorded for most of the remaining agricultural products, especially livestock, dairy products and poultry and eggs.

On a provincial basis declines occurred in all provinces except Prince Edward Island and Nova Scotia. The most significant reduction in over-all production occurred in the Prairie Provinces almost entirely as a result of the substantially smaller grain crops in 1954 as compared with 1953. Smaller outputs of potatoes and grains accounted for lesser declines in Quebec, Ontario and British Columbia. A reduced potato crop more than offset increased production of other commodities in New Brunswick. The smaller potato crops of Prince Edward Island and Nova Scotia were more than counterbalanced by increased outputs of livestock, dairy products, and poultry and eggs in the former province and by dairy products and poultry and eggs in the latter.

11.—Index Numbers of Physical Volume of Agricultural Production by Province 1945-54

(1935-39=100. Exclusive of Newfoundland)

NOTE.—For a description of this index, methods and coverage, see DBS *Quarterly Bulletin of Agricultural Statistics* for April-June, 1952. Figures for 1935-44 are given in the 1950 Year Book, p. 420.

Subsection 3.—Field Crops

After an unprecedented three year period of unusually high and in some instances record field crop production, Canadian farmers in 1954 experienced what was in some respects one of the most difficult and disappointing seasons in many years. The effect of a late spring on delaying seeding in many sections of the country was further aggravated by excessive rainfall particularly in the Prairie Provinces, eastern Ontario and Quebec. Plant growth however was generally rapid and rank as the result of abundant moisture and crop progress early in August pointed to the possibility of western grain crops being substantially above average for the fourth consecutive season. However the rapid development of the most severe rust epidemic in western Canada's history, together with serious sawfly infestation, widespread rain, wind and hail damage and September frosts and snow caused rapid deterioration of crop prospects. As a result, average per acre yields of all crops except tame hay, dry beans and rapeseed were below those of 1953. Among the crops with the sharpest declines in production from 1953 were spring wheat and all rye (spring and fall), each less than one-half the size of the 1953 crop; barley, down by one-third; and oats and potatoes, each down by one-quarter from 1953. Production of several other crops, including flaxseed, mixed grains, grain corn, dry beans, soybeans, sunflower seed, rapeseed, sugar beets and tame hay, was above 1953 levels largely as the result of increased acreages.

Although adverse weather conditions throughout the planting, growing and harvesting seasons were experienced in practically all parts of the country, the heaviest damage was suffered by Prairie grain farmers. For many however the effects of the poor 1954 harvest were offset to some extent by reserve stocks of grain which had accumulated from the record or near record crops of the three preceding years. Despite abnormally heavy marketings during this period Canadian farm stocks of wheat, barley and rye at July 31, 1954 were the highest on record for the end of a crop-year and those of oats and flaxseed had been exceeded only once before. Although marketings and exports of Canadian grain during the 1953-54 crop-year did not continue the record breaking levels of the preceding two crop-years they were well above average in total volume. Marketings of the five major grains in Western Canada in 1953-54 totalled about 610,100,000 bu. compared with

an estimated 844,900,000 bu. in 1952-53 and the ten year (1943-44-1952-53) average of 557,900,000 bu. Combined exports of the same grains (including wheat flour, rye flour, rolled oats and oatmeal in grain equivalent) amounted to 437,900,000 bu. as against 582,800,000 bu. in 1952-53 and the ten year average of 381,800,000 bu.

The gross value of production of principal field crops on Canadian farms in 1953, based on average prices received by farmers throughout the 1953-54 crop-year, was estimated at \$1,806,000,000. Although this total was below the record breaking totals of \$2,306,000,000 in 1952 and \$2,120,000,000 in 1951 it compares favourably with total values prior to those two years. Complete data on the value of Canada's 1954 crops will not be available until several months after the close of the 1954-55 crop-year. However the gross value is expected to be well below that of 1953 largely as the result of the unusually adverse weather conditions on both yield and quality of the 1954 crops. Estimates of the value of the 1954 crops, based on average prices received by farmers during the crop-year ended July 31, 1955, will be published in one of the regularly scheduled Dominion Bureau of Statistics crop reports and in the *Quarterly Bulletin of Agricultural Statistics*.*

* The March 1956 *Quarterly Bulletin*, available at press time, carries further details on 1954 crop production and shows that the gross value of production of all principal field crops in 1954 amounted to \$1,243,000,000—not including the final payment on western Canadian wheat delivered to the 1954-55 pool.

Stocks of Grain in Canada.—Table 15 shows the stocks of Canadian grain on hand in Canada and in the United States on July 31 for the years 1951-54, with averages for the five year periods 1935-39, 1940-44 and 1945-49. Stocks in Canada are separated into those in commercial positions and those on farms. Stocks on farms and in country elevators in the Prairie Provinces are given separately.

15.—Carryover of Canadian Grain as at July 31, 1951-54 and Five Year Averages 1935-49

NOTE.—Figures for individual years before 1951 will be found in the corresponding table of previous editions of the Year Book.

or over, kept for milk purposes.

² Cows and heifers, two years or

The Federal Department of Agriculture inspects all livestock in plants designated as inspected establishments under the Meat and Canned Foods Act. A statistical record is kept of these inspections and details are given in Table 18. Local wholesale butchering and such slaughtering as are carried out by retail butchers and by farmers for their own use are not included. Actually the slaughtering and meat packing industry is concentrated into a comparatively small number of large establishments to facilitate greater efficiency and utilization of products; thus the figures of Table 18 are fairly inclusive. The slaughtering and meat packing industry is dealt with in its proper relation to all other manufacturing enterprises in Chapter XV of this volume. On a gross value basis it normally ranks among the three largest manufacturing industries in Canada but it owes its importance to the value of raw products obtained from the farmer and the rancher rather than to the value added by the manufacturing process.

Wool.—Canada's wool requirements are largely met by imports which in 1954 amounted to 41,487,000 lb. (greasy basis) and 63,088,000 lb. in 1953. Exports amounted to 2,865,000 lb. in 1954 and 3,756,000 lb. in 1953. The apparent domestic consumption of wool shown in Table 19 is accounted for on the basis of production, exports and imports but does not take into consideration changes in stocks for which the data are not available. Differences in wool utilization between years are therefore probably less marked than indicated by these figures.

19.—Production and Apparent Consumption of Wool 1951-54

NOTE.—The 1951 figures shown are based on the Census Revisions of 1950 and previous figures are not on the same basis.

Subsection 5.—Dairying

Milk Production.—Milk production in 1954 amounted to 16,883,621,000 lb., an increase of 434,942,000 lb. over the previous year. The proportion of the total milk production used for factory-made dairy products increased from 56·8 p.c. in 1953 to 57·4 p.c. in 1954. The proportion sold in fluid form was 30·2 p.c. in 1953 and 1954. Milk used for all purposes on farms (home consumed, manufactured and fed) declined from 13·0 p.c. of the total in 1953 to 12·4 p.c. in 1954.

Butter, Cheese and Other Dairy Production.—Butter production in 1954 amounted to 334,343,000 lb., 8,653,000 lb. more than in 1953. Of the 1954 total 312,854,000 lb. was creamery butter, 19,508,000 lb. dairy or farm-made butter and 1,981,000 lb. whey butter. Creamery output was the highest on record, surpassing the previous high of 311,709,000 lb. set in 1943.

Factory cheese production in 1954 was estimated at 91,665,000 lb., an increase of 10.1 p.c. over the 1953 estimate but 55.8 p.c. below the peak production of 207,431,000 lb. in 1942. Exports of cheese, mostly cheddar, amounted to 5,000,000 lb. in 1954 and 16,429,000 lb. in 1953 as compared with 135,409,000 lb. in 1945.

The over-all production of concentrated milk products increased in 1954 over that of 1953 but the production of ice cream decreased by about 165,000 gal. between the two years.

Domestic disappearance of butter (creamery, dairy and whey) was approximately 314,384,000 lb. in 1954 compared with 308,689,000 lb. in 1953.

The domestic disappearance of cheese (including cheddar, process and other) was about 95,134,000 lb. in 1954, an average of 6.26 lb. per capita. In the previous year the per capita average was 6.21 lb.

The domestic disappearance of concentrated whole milk products declined from 20.77 lb. per capita in 1953 to 20.53 lb. in 1954.

Disappearance of all dairy products represented the equivalent of approximately 1,027 lb. of milk per capita in 1954 compared with 1,034 lb. in 1953.

¹ Includes Newfoundland for all manufactured dairy products.

² Includes malted milk, cream powder and substandard products of a variable fat content, items that do not appear separately in this table.

³ Includes milk byproducts items not separately listed, i.e., condensed buttermilk, powdered buttermilk, sugar of milk, casein and powdered whey.

⁴ Since the quantities used for human consumption and livestock feeding cannot definitely be established, per capita figures include both.

⁵ Includes ice cream in terms of milk.

Subsection 6.—Poultry and Eggs

Statistics of production and consumption of poultry meat and eggs are given in Tables 27 to 29.

¹ Includes hatching eggs.

Subsection 7.—Fruit

Commercial fruit growing in Canada is confined almost exclusively to rather limited areas in the Provinces of Nova Scotia, New Brunswick, Quebec, Ontario and British Columbia. In Nova Scotia production is centred mainly in the Annapolis Valley and in New Brunswick in the St. John River Valley and Westmorland County. The fruit growing districts of Quebec are the Montreal area, the North Shore area, the Eastern Townships and the Quebec City district. In Ontario fruit is grown in all the counties adjacent to the St. Lawrence River and the Great Lakes as far west as Georgian Bay, the Niagara district being the most productive. In British Columbia the four well defined fruit areas are the Okanagan Valley, the Fraser Valley, the Kootenay and Arrow Lakes district and Vancouver Island. The climate elsewhere in Canada is not generally suitable for commercial tree-fruit culture.

Strawberries are grown commercially in all provinces for which tree fruit statistics are prepared as well as in Prince Edward Island. However this crop is produced over a somewhat wider area than are tree fruits. In Nova Scotia for example a considerable volume of strawberries is grown in Colchester County and farther north as well as in the apple producing areas of the Annapolis Valley. In British Columbia most of the strawberries are grown in the Fraser Valley rather than in the predominantly tree-fruit producing area of the Okanagan Valley.

Raspberries are grown commercially in Nova Scotia, New Brunswick, and Quebec but the bulk of the crop is produced in Ontario and British Columbia with the Fraser Valley of British Columbia being the most important single area in Canada.

Wild blueberries are harvested on a commercial scale in Newfoundland, Prince Edward Island, Nova Scotia, New Brunswick, and Quebec. This crop is indigenous to certain lands in these areas. Individuals who harvest the wild berries may undertake to burn the land from time to time for weed control and to effect pruning. Dusting may also be carried out to control insects and bees are sometimes introduced to secure better pollination. A large percentage of the crop is frozen and exported. Some blueberries are picked for sale in other provinces but no statistics are available. There is also some production of cultivated blueberries, particularly in British Columbia.

A marketing system has been developed for distributing fresh fruit from the specialized production areas to all parts of the country and a large proportion of the deciduous fruit consumed in Canada is grown domestically. Considerable quantities of apples, strawberries and blueberries are exported annually, with the United States as the most important export market for Canadian fruit. Import restrictions by the United Kingdom have greatly reduced exports of Canadian fruit to that market in recent years.

In most producing areas, particularly in the Annapolis Valley of Nova Scotia, the Niagara Peninsula of Ontario and the Okanagan Valley of British Columbia, fruit growing is either the principal or at least one of the most important forms of agriculture and its prosperity is of paramount importance to the economy of those areas. Apples and small fruits are produced commercially in the provinces named but tender tree fruits and commercial vineyards are very largely limited to Ontario and British Columbia.

Canning and processing industries have developed in the fruit growing districts and, although the importance of the processing market varies with different fruits, it provides a valuable outlet for substantial proportions of most Canadian grown fruit crops. Some canned fruits are exported.

Subsection 8.—Special Crops

Tobacco.—The chief tobacco growing area of Canada is located in southern Ontario in the counties adjacent to Lake Erie. Most of the cigarette tobacco comes from this district. In Ontario in 1954, 116,990 acres of flue-cured or Bright Virginia type tobacco and 3,122 acres of Burley tobacco were harvested. These are the most important types grown in Canada though dark air-cured and fire-cured tobacco as well as cigar tobacco are grown on a more limited scale. The only other important production comes from Quebec. In 1954, 5,737 acres of flue-cured tobacco, 3,781 acres of cigar tobacco and 1,345 acres of pipe tobacco were harvested in that Province.

A study of Department of National Revenue reports on tax-paid withdrawals of tobacco products reveals changes in the smoking habits of Canadians during the past three decades. In 1922, the first year for which comparable figures are available, Canadian per capita consumption of cigarettes was 229, cigars 20, cut tobacco 1.3 lb., plug tobacco 1.1 lb. and snuff about 1.3 oz. By 1954 the annual per capita consumption of cigarettes had increased to 1,455, cigars had dropped to 16.1, cut tobacco went up to 1.6 lb. but plug declined considerably.

Sugar Beets and Beetroot Sugar.—Sugar beets are grown commercially in Quebec, Ontario, Manitoba and Alberta and seven beet sugar factories are located in these provinces. In Quebec, commercial production, which centres in the St. Hilaire area of the Eastern Townships, started in 1944; in 1954 about 68,000 tons were harvested from 6,500 acres. The sugar beet industry of Ontario is largely confined to the southwestern section of the province and factories are located at Wallaceburg and Chatham. In 1954 Ontario factories processed about 257,000 tons harvested from over 23,000 acres.

Processing of sugar beets in Manitoba began in 1940 when 95,000 tons were handled. In 1954 the factory processed 237,000 tons from 24,000 harvested acres. In Alberta, where the industry has shown steady growth, sugar beets are produced under irrigation with yields averaging above those received in the other provinces. In 1954, the three Alberta factories, located in the south of the province at Raymond, Picture Butte and Taber, handled 443,000 tons of beets from a harvested area of about 37,000 acres.

Apiculture.—Honey is produced commercially in all provinces of Canada except Newfoundland, Ontario being the largest producer. There is a considerable movement of honey from the Prairie Provinces to other parts of Canada. In recent years exports have been small, the United States being the most important external market.

Honey statistics have been compiled on an all-Canada basis since 1924 and show that the largest recorded crop was in 1948 when 45,145,000 lb. were produced. The smallest crop since 1924 was that of 1954 which amounted to 19,885,000 lb. The reduced production of recent years was owing to reduction in the number of bee colonies but that of 1954 was attributed to low average yields per colony resulting from unfavourable weather conditions in most provinces.

In order to facilitate storage, shipment and uniformity of quality, considerable quantities of Canadian honey are pasteurized. Beekeepers' marketing co-operatives are active in several provinces.

Bees are kept in some of the fruit growing and greenhouse districts of the country chiefly for purposes of pollination.

Maple Sugar and Syrup.—Maple syrup is produced in the Provinces of Nova Scotia, New Brunswick, Quebec and Ontario. The bulk of the crop comes from the Eastern Townships of Quebec, a district famous both in Canada and the United States as the centre of the maple products industry. Virtually all of the maple products exported are sent to the United States with the larger proportion moving as sugar, although substantial quantities of syrup are also shipped.

Much of the syrup sold in Canada is marketed in one gallon cans direct to the consumer from the producer but a considerable amount of both sugar and syrup is sold each year to processing firms.

HONEY

SUGAR BEETS

MAPLE PRODUCTS

Fibre Flax.—The demand for fibre flax was heavy during World War II when exports increased to many times the prewar volume. After the War however exports of fibre flax to Canada's principal market, the United Kingdom, dropped sharply and acreage devoted to this crop decreased; in 1954 it was at the lowest level since 1931.

Subsection 9.—Prices of Agricultural Produce

The monthly index of farm prices of agricultural products was designed to measure changes occurring in the average prices farmers receive at the farm from the sale of farm products. In comparing current index numbers with those before August 1954 certain points should be considered. Western grain prices used in the construction of the index before Aug. 1, 1954 are final prices for all grains. Since Aug. 1, 1954 only initial prices are available for western wheat and only initial prices plus interim payments for western oats and barley. Any subsequent participation payments made on the 1954 crops will be added to the prices currently used and the index revised upward accordingly.

40.—Average Index Numbers of Farm Prices of Agricultural Products by Province 1945-52 and by Month 1953 and 1954

(1935-39=100)

NOTE.—A description of this index, its coverage and the methods used will be found in *DBS Quarterly Bulletin of Agricultural Statistics* for October-December 1946.

¹ Initial payments plus additional payments to producers. ² Based on cash closing prices, Winnipeg Grain Exchange. From Aug. 1, 1944 to Oct. 22, 1947 prices of oats and barley remained at or near the government-imposed ceiling prices. From Oct. 23, 1947 to July 31, 1949 open market trading again prevailed. Equalization payments to producers are included for the crop years 1944-45 to 1947-48, inclusive. ³ Average cash closing price, Winnipeg Grain Exchange, except where otherwise noted. ⁴ Fixed price to growers. ⁵ \$5 fixed price to growers plus 50 cents participation payment. ⁶ Winnipeg Grain Exchange renewed trading in flaxseed cash and futures on Aug. 16, 1948. The Canadian Wheat Board was authorized to buy all flaxseed offered to it during the 1948-49 crop year on the basis of \$4 per bushel for No. 1 C.W. in store Fort William-Port Arthur, Ont.

Subsection 10.—Food Consumption

Consumption of Major Foods.—A study of consumption of the major foods was undertaken during World War II by the Dominion Bureau of Statistics in recognition of the national and international significance of such information. Though data on total consumption of certain commodities such as wheat, alcoholic beverages, meats, etc. have been available for a considerable period, it was found necessary to establish a per capita level of consumption of a wide range of products on a comparable basis.

The figures represent available supplies, including production and imports, adjusted for change of stocks, exports, marketing losses and industrial uses. All calculations have been made at the retail stage of distribution, except for meats, where the figures are worked out at the wholesale stage. The amount of food actually eaten would be somewhat lower than indicated because of losses and waste occurring after the products reached the hands of the consumer. It should also be pointed out that there are minor discrepancies in certain of the figures since statistics of storage stocks in the hands of retailers and consumers were not available.

All basic foods have been classified under 13 main commodity groups. Totals for each group have been computed using common denominators for the group, for example: milk solids (dry weight) in the dairy products group; fat content for fats and oils; and fresh equivalent for fruits. All foods have been included in their basic form, that is, as flour, fat, sugar, etc., rather than in more highly manufactured forms.

The series in Table 43 represents the official estimates of yearly supplies of food moving into consumption, expressed in pounds per capita, for the years 1935-39 as an average for comparison with the years 1952, 1953 and 1954.

43.—Per Capita Supplies of Food Moving into Consumption 1952-54 and Average for 1935-39

Kind of Food and Weight Base	Pounds per Capita per Annum				Percentages of 1935-39 Average

* Fluctuations in apparent per capita flour consumption are owing partly to unavailability of complete data on flour inventories in all positions. ² Includes soybean flour. ³ Exclusive of Newfoundland. ⁴ Break-down according to current classification not available. ⁵ Includes process cheese. ⁶ Includes cream expressed as milk.

Consumption of Meats.—Production of meats from slaughter in Canada, total supply, distribution and per capita consumption of meats and lard are shown in Table 44. All estimates are on a carcass weight basis except canned meats which are in terms of product.

¹ Edible meat excluding offal. ² Basis cold dressed carcass weight. ³ Includes edible offal of beef and veal. ⁴ Quantity small; included with beef. ⁵ Edible meat excluding fats and offal. ⁶ The positive changes represent deductions from the available supply during a given year and therefore are subtracted; similarly negative changes represent an increase in disappearance. ⁷ Includes rendered pork fat.

Section 5.—Agricultural Statistics of the Census

Summary agricultural statistics recorded by the Census of 1951 are given in the 1954 Canada Year Book, pp. 438-447. They include information relating to occupied farms classified by province, tenure and size, farm operators classified by age and province, farm machinery, farm electrification and farm areas. More detailed information may be obtained from the Ninth Census of Canada, 1951 specifically the *Census of Canada 1951* Vol. VI, Parts I and II.

Section 6.—International Crop Statistics

Tables 45 and 46 are based on estimates published in March 1955 by the Foreign Agricultural Service, United States Department of Agriculture, and give the acreages and production of wheat and the production of oats and barley for the harvests of 1953 and 1954 and averages for the years 1945-49 in the leading countries of the world.

45.—Estimated Acreages and Production of Wheat Harvested in 1953 and 1954 in Specified Countries and Average for 1945-49

NOTE.—The interpretation of the symbols used in the tables throughout the Year Book will be found facing p. 1 of this volume.

Land is the basis of the Canadian economy and wise use of the land is the foundation of good forestry. In addition to providing the greatest amount of the most usable woods as economically as possible, good forestry will aid in maintaining agricultural lands against drought and erosion; will continuously protect water-catchment areas and assure supplies of water; will furnish cover for game and fur bearing animals; and will give Canadians and their tourist guests opportunity for recreation which only the forests can provide.

Section 1.—Forest Regions†

The forests of Canada cover a vast area in the north temperate climatic zone. Wide variations in physiographic, soil and climatic conditions cause marked differences in the character of the forests in different parts of the country; hence eight fairly well defined forest regions may be recognized. These regions, with the relative proportion of the total area of all forest regions occupied by each, are as follows:—

Region	Percentage of Total Regional Area	Region	Percentage of Total Regional Area
Boreal.....	82.1	Acadian.....	2.0
Great Lakes-St. Lawrence.....	6.5	Columbia.....	0.8
Subalpine.....	3.7	Deciduous.....	0.4
Montane.....	2.3		
Coast.....	2.2	TOTAL.....	100.0

* Sections of this Chapter that deal with forestry and forest administration have been revised in the Forest Economics Section, Forestry Branch, Department of Northern Affairs and National Resources. Sections dealing with forest and allied industries, except as otherwise noted, have been revised in the Forestry Section, Industry and Merchandising Division, Dominion Bureau of Statistics.

† A more detailed discussion of forest regions is given in Bulletin No. 89, *A Forest Classification for Canada*, by W. E. D. Halliday, a publication of the Forestry Branch, Department of Northern Affairs and National Resources, Ottawa. Accounts of variations in Canadian physiography, climate, etc., are given in Chapter I of this volume.

Boreal Forest Region.—This region comprises the greater part of the forested area of Canada, forming a continuous belt from the Atlantic Ocean westward to the Rocky Mountains and northwestward to Alaska. The white and the black spruces are characteristic tree species; other prominent conifers are tamarack, which ranges throughout the region, balsam fir and jack pine in the eastern and central portions, and alpine fir and lodgepole pine in the western and northwestern parts. Although the region is primarily coniferous there is a general admixture of broadleaved trees such as the white birches and the poplars; these are important in the central and south-central portions, particularly where the region grades into the Grassland Formation of the prairies. In turn the proportion of barrens (non-forested rock, muskeg and tundra) increases in the northern parts until the region finally merges into the Tundra Formation. In the southern parts of the eastern portions of the region there is considerable intrusion of species from the Great Lakes-St. Lawrence Forest Region, such as the white and the red pines, yellow birch, sugar maple, black ash and eastern white cedar.

Subalpine Forest Region.—This is coniferous forest found on the higher slopes of the mountains east of the Coast Ranges. It extends northward to the divide between the drainage of the Skeena, Nass and Peace Rivers and that of the Stikine and Liard Rivers. The characteristic species are Engelmann spruce, alpine fir and lodgepole pine. There is a close relationship with the Boreal Region, from which the black and the white spruces and aspen intrude, more particularly in the northern parts. There is also some entry of Douglas fir from the Montane Forest, and western hemlock, western red cedar and amabilis fir from the Coast Forest. Other species found are western larch, whitebark pine and limber pine.

Montane Forest Region.—This region occupies a large part of the interior uplands of British Columbia, part of the Kootenay Valley and a small area on the east side of the Rocky Mountains. It is a northern extension of the typical forest of much of the western mountain system in the United States, and comes in contact with the Coast, Columbia and Subalpine Forests. Ponderosa pine is a characteristic species of the southern portions, to which it is restricted. Douglas fir is found throughout but more particularly in the central and southern parts. Lodgepole pine and aspen are generally present, the latter being well represented in the north-central portions. Engelmann spruce and alpine fir from the Subalpine Region become important constituents in the northern parts, together with white birch. The Boreal white spruce also enters here. Extensive bunch grass and sage brush communities of the Grassland Formation are found in many of the river valleys.

Coast Forest Region.—This is part of the Pacific Coast forest of North America. Essentially coniferous the Coast Region consists principally of western red cedar and western hemlock, with Douglas fir in the south and Sitka spruce in the north. Amabilis fir and yellow cedar occur widely and, together with mountain hemlock and alpine fir, are common towards the timberline. Western white pine is found in the southern parts. Broadleaved trees such as black cottonwood, red alder and broadleaf maple have a limited distribution in this region. Arbutus and garry oak occur in Canada only on the southeast coast of Vancouver Island and the adjacent mainland. These are species that have entered from the Montane Forest in the United States.

Columbia Forest Region.—A large part of the Kootenay River valley, the upper valleys of the Thompson and Fraser Rivers, and the Quesnel Lake area of British Columbia contain a coniferous forest closely resembling that of the Coast Region. Western red cedar and western hemlock are the characteristic species of this Columbia Region. Associated with these are Douglas fir, which is of general distribution, and, in the southern parts, western white pine, western larch and grand fir. Engelmann spruce from the Subalpine Region is important in the upper Fraser Valley and is found to some extent at the upper levels of the forest in the remainder of the region. Towards lower elevations in the west and in parts of the Kootenay Valley, the forest grades into the Montane Region and in a few places into the Grassland Formation.

Deciduous Forest Region.—A small portion of this forest, widespread in the eastern United States, is found in southwestern Ontario between Lakes Huron, Erie and Ontario. Here with the broadleaved trees common to the Great Lakes-St. Lawrence Forest Region, such as sugar maple, beech, white elm, basswood, red ash, white oak and butternut, are scattered a number of other broadleaved species which have their northern limits in this locality. Among these are the tulip-tree, cucumber-tree, papaw, red mulberry, Kentucky coffee-tree, redbud, black gum, blue ash, sassafras, mockernut, and pignut hickories, and scarlet, black, and pin oaks. There are black walnut, sycamore and swamp white oak also that are largely confined to this region. Conifers are few, mainly scattered white pine, tamarack, red juniper and hemlock.

Great Lakes-St. Lawrence Forest Region.—Along the Great Lakes and the St. Lawrence River valley is a forest of a very mixed nature, characterized by the white and the red pines, eastern hemlock and yellow birch with certain dominant broadleaved species common to the Deciduous Forest Region, such as sugar maple, red maple, red oak, basswood and white elm. Other species with wide range are the eastern white cedar, the largetooth aspen and, to a lesser extent, beech, white oak, butternut and white ash. Boreal species, such as the white and the black spruces, balsam fir, jack pine, poplar and white birch, intrude from the north, and in the east, red spruce from the Acadian Forest becomes abundant in certain portions.

Acadian Forest Region.—The greater part of the Maritime Provinces contains a forest closely related to both the Great Lakes-St. Lawrence and the Boreal Regions. The characteristic species is red spruce, with which are associated balsam fir, yellow birch and sugar maple, with some red pine, white pine, beech and hemlock. Other species of wide distribution are the black and the white spruces, red oak, white elm, black ash, red maple, white birch, wire birch and the poplars. Eastern white cedar and jack pine however are restricted almost entirely to the western half of the region.

Section 2.—Native Tree Species

There are more than 150 tree species in Canada of which 31 are conifers, commonly called 'softwoods'. About two-thirds of these softwoods and about 10 p.c. of the large number of deciduous or 'hardwood' species, are of commercial importance. About 82 p.c. of the volume of merchantable timber is made up of softwood species.

The dominant species existing in each forest region are given in Section 1, preceding. Detailed information is contained in Forestry Branch Bulletin No. 61, *Native Trees of Canada*,* published by the Department of Northern Affairs and National Resources.

Section 3.—Forest Resources

The forested area of Canada (exclusive of Labrador) is estimated at 1,567,517 sq. miles or 44 p.c. of the total land area.

Nearly 740,000 sq. miles or 47 p.c. of the total forested area of Canada is classified as "non-productive", i.e., incapable of producing crops of merchantable wood. However these forests do provide valuable protection for drainage basins and shelter for game and fur bearing animals.

Of the productive portion of the forested area 582,000 sq. miles are considered to be now accessible for commercial operations. The economically inaccessible productive forests contain much valuable timber suitable for lumber and pulpwood. At present it is not economical to conduct cutting operations on these areas but, as low-cost methods of transportation are developed, as accessible forested areas become depleted, and as the demand for wood products increases, these inaccessible productive forests will be brought progressively into commercial development. Owing generally to less favourable climatic conditions the productive capacity of these inaccessible timberlands is expected to be lower than that of the accessible areas now being logged.

* Obtainable from the Queen's Printer, Ottawa, price \$1.50.

The predominant part that lumber and other forest products have played in the development of Canada has resulted in a widespread tendency to evaluate the forests in terms of timber alone. A growing realization of the economic importance of the non-timber values however is bringing about increasing recognition of their true value and thus developing a broader concept of forestry.

Inventories of the forest resources are made periodically by provincial forest authorities and, with their co-operation, the Forestry Branch of the Department of Northern Affairs and National Resources compiles the National Forest Inventory. The latest estimates of the total stand of timber, by province and region, appear in Table 1. These estimates are subject to constant revision as more accurate and complete inventories are compiled.

1.—Estimate of Total Stand of Timber by Type and Size and by Province and Region 1955

¹ Cubic volumes do not include wood in stumps and unusable tops.

Forest Land Tenure.—Private individuals or corporations own 6 p.c. of the total forested land of Canada and the remaining 94 p.c. is still in the possession of the Crown in the right of the Federal or the Provincial Governments. Rights to cut Crown timber under lease or licence have been granted on 8 p.c. of the total forest land. Some of the unalienated land has already been logged and has reverted to the Crown but it is mainly located in the inaccessible and less accessible areas.

Farm woodlots on the 623,000 farms across Canada cover about 22,780,000 acres (Census of 1951)—13 p.c. of the total farm area and over 6 p.c. of the total accessible productive forest. These small wooded tracts ranging in size from three or four acres to 200 or more acres are among the most accessible forests in Canada. Further, the woodlots of eastern Canada are in general highly productive because they lie in the southern parts of the country and frequently occupy soils that are considerably higher in quality than those typical of the northern forests.

Section 4.—Forest Depletion

A general account of forest depletion and increment is presented in this Section. Details of the scientific control of those influences that account for wastage, viz., forest fires, insect pests, etc., are dealt with in Section 5.

The average annual rate and cause of depletion of reserves of merchantable timber during the ten years 1944-53, together with preliminary data for 1954, are given in Table 3. Of the total depletion of the forests in the ten year period 94 p.c. was utilized and 6 p.c. was destroyed by fire. The utilization of 3,140,644,000 cu. feet comprised 39 p.c. logs and bolts, 32 p.c. pulpwood, 25 p.c. fuelwood, and the remaining 4 p.c. miscellaneous products. Approximately 6 p.c. of the total utilization was exported in the form of logs and bolts and pulpwood.

The more efficient utilization of timber that has been cut is one factor related to forest depletion, for there is little doubt that in the past too high a percentage of the sawn log was discarded. Changes of great significance have been taking place in the uses of wood, permitting the utilization of sizes and qualities previously considered unmerchantable. The development and the manufacture of rayon, cellophane and numerous other products in the cellulose industry is rapidly extending the use of wood. The increasing demand for plastic-wood products, fibre board and laminated wood is resulting in greater use of inferior classes of wood and therefore in the more complete utilization of forest resources and in the elimination of much waste.

The accessible portion of the productive forests of Canada cover an area of 582,000 sq. miles and constitute the reserve from which forest production will be obtained for many years to come. The supply of merchantable timber on this area is estimated to be 312,802 million cu. feet, of which approximately 159,800 million cu. feet are located on that portion of the area at present under lease or private ownership. The utilization in 1954 of 3,661 million cu. feet represents 1.2 p.c. of the accessible productive volume, and

2.3 p.c. of the merchantable volume on the occupied areas (where the utilization is actually taking place). A comparison of these percentages reveals the high rate of cutting occurring on the occupied forests, when compared to the fact that the annual growth is not being used on the remainder of the accessible productive forest. This situation emphasizes the necessity for the orderly management of all our commercial forests if the forest industries are to maintain their dominant position in the development of the natural resources of Canada.

Section 5.—Forest Administration

Subsection 1.—Administration of Federal and Provincial Timberlands*

The major portion of the forest resources of Canada are owned and administered by the provincial governments. The Federal Government is responsible for the administration of those of the Yukon and Northwest Territories and federal lands such as the National Parks and Forest Experiment Stations. About 103,000 sq. miles are owned privately by individuals or corporations.

The general policy of the Federal Government and the provincial governments has been to dispose of the timber under their jurisdiction by means of licences to cut rather than by the outright sale of timberland. Under this system the Crown retains ownership of the land and control of the cutting operations. Revenue is received in the form of Crown dues or stumpage (either in lump sums or in payments made as the timber is cut); ground rents and fire protection taxes are collected annually. All these charges against the timber and land may be adjusted at the discretion of the governments concerned.

The three Maritime Provinces did not adopt this policy to the same extent as did the rest of Canada. In Prince Edward Island practically all the forest land has been alienated and is in small holdings, chiefly farmers' woodlots. In Nova Scotia 73 p.c. of the forest land is privately owned; in New Brunswick 48 p.c. and in the other provinces as follows: Newfoundland (including Labrador) 4 p.c.; Quebec 7 p.c.; Ontario 9 p.c.; Manitoba 7 p.c.; Saskatchewan 6 p.c.; Alberta 7 p.c.; and British Columbia 4 p.c.

Provincial lands suitable for growing trees are set aside for timber production and the policy of disposing of the title to lands fit only for the production of timber has been almost abandoned in every province of Canada.

* More detailed information is given in the 1954 Year Book, pp. 458-465.

Over 2,200 professionally trained foresters are employed in Canada by the Federal Government, by provincial forest services, or by pulp and paper and lumber companies. Those working for the Federal Government are engaged almost entirely in research; those employed by the provincial governments devote their attention mainly to the administration of provincial forest lands; and those in private industry, although they do some research, are concerned chiefly with forest management and protection.

Federal Administration.—The Canada Forestry Act provides, among other things, authority for the operation of forest experiment stations and forest products laboratories, some of which have been in existence for many years. The Act also authorizes the granting of federal assistance to the provinces to enable them to improve the management of their own forests. Under the Federal-Provincial Agreements signed under authority of the Act, seven of Canada's ten provinces have undertaken a forest inventory with federal financial assistance and six provinces have reforestation agreements. The history of the Federal-Provincial Agreements and their relation to the Canada Forestry Act is described in the special article following.

THE FEDERAL-PROVINCIAL FORESTRY AGREEMENTS*

INTRODUCTION

In December 1949 legislation of prime importance to Canadian forestry—the Canada Forestry Act—was placed on the federal statute books. Of equal interest was the announcement in May 1951, by the then Minister of Resources and Development, that the Government of Canada was prepared, under authority of this Act, to enter into agreements with the provinces which would provide for federal financial assistance to them in carrying out certain forestry activities, with a view to promoting sound management of Canada's forest resources.

HISTORICAL REVIEW

During the first thirty years of this century the forest resources of the three Prairie Provinces and the Railway Belt of British Columbia, as well as those of the northern territories and other lands under federal control, were administered by the Government of Canada through various agencies of the Department of the Interior. The Forest Service of that Department was responsible for all timber administration of forest reserves totalling, by the late 1920's, about 35,000 sq. miles, and for fire protection on nearly a quarter of a million square miles. Research was carried out by the Forest Service on a limited scale, although this activity increased after the Commission of Conservation was abolished in 1921. Forest products research was undertaken at laboratories successively established in Montreal, Vancouver and Ottawa. Nevertheless the functions of the Forest Service were mainly of an administrative nature during this period.

In 1930 the forest resources of the western provinces passed from federal to provincial jurisdiction where, under the British North America Act, they rightfully belonged. (Provincial jurisdiction over the forests of the eastern provinces and most of British Columbia had been established at Confederation.) The administrative duties of the Forest Service in this vast area were thus abruptly terminated; it became—and remains to the present day—primarily a research organization. The Dominion Forest Reserves and Parks Act of 1911, which had provided the legislative basis for most of the Forest Service's activities,

* Prepared by H. W. Beall, Chief, Forestry Operations Division, Forestry Branch, Department of Northern Affairs and National Resources, Ottawa.

no longer had any practical application although it remained on the statute books for nearly twenty years. During this period the need for revised federal forest legislation, in keeping with the altered status of the Forest Service, became increasingly apparent.

At the same time there was a growing conviction in many quarters that provision should be made in any new forest legislation for federal financial assistance to provincial governments in the protection and development of their forest resources. Precedents involving such federal assistance to the provinces already existed in other fields of provincial jurisdiction, where national as well as regional or local interests were affected. Clearly the welfare of the forest estate was a matter of major concern from the national standpoint, not only because of the prominent position of the forest industries in the Canadian economy and the large federal revenue derived from them, but because of the far reaching influence of the forests on streamflow, wildlife, recreational values, and the national wellbeing in general.

This principle had been recognized in the United States as early as 1911 by the enactment of the Weeks Law, which included provision for federal financial aid to state governments in forest fire protection. Federal-state co-operation in this field was greatly expanded under the Clarke-McNary Act of 1924, and was extended to other phases of forestry, although on a much more limited scale, in this and subsequent legislation.

Representations for similar legislation were made to the Canadian Government from time to time. Financial aid to provincially administered forestry projects was given in 1939-40 under the National Forestry Program, a youth training scheme which was cut short by the demands of World War II, and an arrangement was made with the Province of British Columbia during World War II for the use of alternative service workers for protecting forests from the threat of incendiary bombs carried by Japanese paper balloons.

In 1943 the Report of the Subcommittee on Conservation and Development of Natural Resources of the Advisory Committee on Reconstruction—commonly known as the "Wallace Report"—was published. Paragraph 4 of the Subcommittee's recommendations relating to forestry proposed that there be enacted a Dominion Forest Act which would provide, among other things, for "the granting of financial assistance to the provinces for forest protection, insect and disease control or eradication, development of recreational facilities, woodlot improvement projects, reforestation, forestry publicity and education, and subsidies to be passed on to industry for approved forestry practices in woodlands management".

Following the cessation of hostilities in World War II, active consideration was given to the preparation of federal forest legislation which would implement, in substantial measure, these recommendations of the Wallace Report. On Oct. 13, 1949 Bill 62, "An Act Respecting Forest Conservation", was introduced as a Government measure in the House of Commons. The Bill met with approval by all parties in Parliament and received Royal Assent as the Canada Forestry Act on Dec. 10, 1949.

THE CANADA FORESTRY ACT

The Canada Forestry Act is entirely permissive in character. It merely *authorizes* the Governor in Council and the Minister of Northern Affairs and National Resources to take certain action.

The principal terms of the Act are briefly as follows:—

- (a) Provision is made for the establishment of and carrying out of necessary activities in National Forests and Forest Experimental Areas, and for making regulations for the protection, care, and management of such areas. Penalties are provided for violation of such regulations.
- (b) The establishment and maintenance of forest products laboratories are provided for.
- (c) The Governor in Council is given authority to assist any province or forest owner in the protection and development of forest lands with a view to the conservation and advantageous utilization of the forest resources of Canada.

- (d) The Minister of Northern Affairs and National Resources is authorized,
- (i) with the consent of the Governor in Council, to enter into agreements with the provinces for the protection, development or utilization of forest resources;
 - (ii) to make arrangements with other federal agencies for carrying out the purposes of the Act; and
 - (iii) to enter into agreements with any persons providing for forest and forest products research, and economic studies relating to forestry.
- (e) Donations and bequests made for the purposes of the Act may be so used; otherwise all expenditures under the Act are to be paid out of moneys appropriated by Parliament for that purpose.

The last-named clause differs from the terms of certain comparable legislation in other fields, such as the Trans-Canada Highway Act, where provision is made for payments to the provinces out of unappropriated moneys in the Consolidated Revenue Fund during a stated period of years and up to a stated maximum. The supply of funds under such "statutory votes" is virtually automatic; however if it should become necessary to exceed the maximum payment stipulated, an amendment to the Act would be required. On the other hand under provisions such as those of the Canada Forestry Act the responsible Minister must seek the necessary appropriation from Parliament each year and must be prepared to justify it item by item; but the procedure is more flexible in that the amount asked for may be determined in the light of current needs.

Apart from the question of financing the clause in the Canada Forestry Act, with which this article is primarily concerned, is Sect. 6, paragraph (a), which reads: "The Minister may with the consent of the Governor in Council enter into agreement with any province, for the protection, development or utilization of forest resources, including protection from fire, insects and diseases, forest inventories, silvicultural research, watershed protection, reforestation, forestry publicity and education, construction of roads and improvement of streams in forest areas, improvement of growing conditions and management of forests for continuous production".

Thus in one short paragraph, provision is made for federal assistance to the provinces embracing virtually every field of forestry activity. In this respect the Canadian law differs markedly from that of the United States, where federal-state co-operation has developed by stages over the years, in fields delimited by successive Acts of Congress.

THE FEDERAL-PROVINCIAL AGREEMENTS

It will be observed that forest protection is the first item mentioned in the list of specific fields of federal-provincial co-operation included in the recommendations of the Wallace Committee and in the Canada Forestry Act itself. Forest fire protection did in fact occupy a prominent place in early planning at the technical level for the implementation of the co-operative clauses of the Canada Forestry Act, and in preliminary discussions regarding the possible form of federal-provincial forestry agreements. However other important fields of forestry activity were also considered. As a preliminary to sustained-yield forest management a reliable appraisal of the location, extent, and nature of the forest resources is necessary. The initiation or acceleration of provincial forest inventory surveys was therefore regarded as a particularly desirable field for federal assistance. Consideration was also given to the provision of financial aid to the provinces in various fields of forest management, notably in the reforestation of lands which, while otherwise favourably situated from the economic standpoint, have failed as a result of logging and fire to restock naturally with usable species.

In the matter of forest research and forest products research the Forestry Branch of the Department of Northern Affairs and National Resources is particularly well equipped to conduct investigations of value both to the provinces and to industry, and it was recognized that emphasis in these fields should be placed on the continuation and expansion of such services. Research in forest fire protection is one of the major phases of forest research in which substantial assistance has been and is being given by the Forest Research Division of the Forestry Branch to the forest protection services maintained by the provincial governments and the forest industry.

On May 2, 1951 the Minister of Resources and Development announced in the House of Commons that, with a view to encouraging and assisting the provinces in bringing about the management of their forests on a sustained-yield basis, the Government of Canada was prepared to enter into agreements with the provinces which would provide:

- (1) that the Federal Government would pay one-half the cost to the provinces of completing and maintaining their forest inventories during the next five years, and
- (2) that the Federal Government would pay one-fifth of the cost to the provinces of reasonable programs for the reforestation of provincial Crown lands (in other words, the federal share would be equal to one-quarter of the province's share), provided that the federal contribution would not exceed, in any year, the amount by which the combined expenditures for the reforestation of such lands exceeded the province's own expenditures for such purposes during the previous three years. This Section has since been amended to provide for federal payments of \$10 per thousand trees planted and \$1 per acre seeded, provided that the province's share of the reforestation program is maintained at or above the average level of the past three years.

To provide for payment of the federal share of these costs in the fiscal year 1951-52 Parliament was asked to vote a sum of \$800,000 for forest inventory and \$225,000 for reforestation.

The fact that the Government thus undertook to implement Sect. 6(a) of the Canada Forestry Act at this time, in spite of the urgent priority assigned to defence expenditures, is an indication of its concern for the welfare of the forest estate. For the fiscal year 1952-53 the vote for forest inventory was increased to \$1,000,000 while that for reforestation was again set at \$225,000 and for subsequent years has remained the same.

A conference, at which all provinces were represented, was convened in Ottawa by the Minister of Resources and Development on May 9 and 10, 1951 to consider the Federal Government's proposals in detail. A draft form of agreement, providing for federal assistance to the provinces in forest inventory and reforestation, was approved in principle by the conference. Lengthy consultations were necessary in the preparation of the final text, and it was not until the middle of October that the documents were completed. In the meantime however, at the Minister's invitation, a number of the provinces had prepared programs of work in accordance with the intent of the agreements, and had made definite progress in implementing them.

Agreements with New Brunswick, Manitoba, Saskatchewan, Alberta, and British Columbia were executed on Dec. 4, 1951 and with Ontario, Prince Edward Island, and Nova Scotia on Jan. 28, Mar. 7, and June 12, 1952 respectively.

TERMS OF THE AGREEMENTS

Before reviewing the terms of the Federal-Provincial Forestry Agreements in detail it may be of interest to note certain general principles upon which they are based and which, to a considerable degree, are common to other federal-provincial co-operative arrangements in Canada, and to federal-state co-operative measures in forestry in the United States.

- (1) Federal contributions are intended to *supplement* provincial expenditures rather than to replace the normal appropriations made by the provinces.
- (2) The Federal Government shares in the cost of each project carried out under the agreements—that is, no projects are designated as being paid for entirely out of federal funds, and others by the province only.
- (3) The Federal Government claims no proprietary interest in any project carried out under the agreements.
- (4) The actual administration of the projects is the responsibility of the provinces in all cases.
- (5) Adherence to certain general standards and specifications is provided for in the agreements, where necessary in the interests of efficiency, but the Federal Government makes no attempt to set up a rigid, common pattern of procedure, or to discourage the provinces from using existing methods and techniques which have proved satisfactory.

Forest conditions and problems in Prince Edward Island differ materially from those encountered in the other provinces of Canada. In consequence the forestry agreement with that Province is specially designed to assist the Province in the reforestation of waste lands unsuitable for the production of agricultural crops. Under this agreement the Government of Prince Edward Island is proceeding with a program for the reforestation of such lands and the Federal Government is sharing, on an equal basis, the cost of carrying out that program. A maximum federal contribution of \$7,500 was provided for each of the first two years of the five year period covered by the agreement. By the end of the fourth year the program had expanded greatly and the cost was almost doubled.

With the exception of Prince Edward Island the form of the agreements with all provinces is identical. The principal terms of this agreement form are summarized below:—

Duration of Agreement

The agreement applies to projects carried out and to expenditures incurred under it by the Province during the five year period from Apr. 1, 1951 to Mar. 31, 1956, and is subject to renewal thereafter on such terms as may then be decided upon.

Forest Inventory

- (1) The Province undertakes to complete, within five years of the date of the agreement, a forest inventory, including so far as is practicable all forests within its boundaries except those on federal lands, and to furnish summaries of the data so obtained to the Federal Government.
- (2) The Federal Government undertakes to pay half the cost to the Province of preparing and maintaining this inventory during the period covered by the agreement, provided that the inventory conforms to the general standards and specifications attached to the agreement. If these standards are exceeded, an appraisal is to be made to determine the federal share of the cost. Recognition is given to the present status of the inventory and to the methods already in use.
- (3) Inventory projects that may qualify for federal aid include: ground control surveys, air photography, base mapping, interpretation of forest data from photographs, field surveys for forest data, compilation and preparation of forest maps and inventory reports, and certain supervisory operations.
- (4) Two classes of forest inventory surveys are eligible for federal assistance—*reconnaissance surveys*, intended to determine locations of the areas of productive forests, and generally applicable to presently inaccessible regions and to those where the proportion of productive forests is small; and *provincial surveys*, intended to determine the areas of different classes of forest and to provide estimates of timber volumes for large areas, such as are required for purposes of provincial administration and for provincial and national inventory statements. Such surveys are particularly well adapted to the use of air photographs for classifying the forest according to type, height, and density—a process which greatly reduces the amount of ground sampling required. The more intensive *working plan* surveys, which provide detailed estimates of timber volumes and other forest characteristics for relatively small areas, are not included.
- (5) The classes of information to be obtained in federally-supported inventory programs are specified:
 - (a) Areas of productive and non-productive forest are to be determined.
 - (b) Productive forest is to be classified into three main types—softwood, mixed-wood, and hardwood—and is to be further classified as to merchantability and accessibility.
 - (c) Accessible productive forest areas are to be subdivided according to the following classes of tenure—occupied Crown forest, unoccupied Crown forest, and other forest.
 - (d) Estimates of timber volume are to be made for the principal species in the accessible productive forests, separate estimates being given for timber of 10 inches diameter at breast height and larger, and for trees of 4 inches to 9 inches diameter.
 - (e) Provision is to be made for obtaining preliminary data regarding forest growth.
- (6) Estimates of timber volumes are required for large unit areas only, of the order of one-half to one million acres, sampling on the ground being designed to give a probable error of plus or minus 10 per cent for gross volume estimates on such areas. Stratified random sampling is to be employed where possible, but it is recognized that in many cases some form of selective sampling may be necessary.
- (7) For reconnaissance surveys in thinly timbered areas, photography is planned on a scale of 1:40,000 (1 inch=3,333 feet), with base maps on a scale of 1 inch to the mile. Areas warranting more detailed examination are to be photographed at 1:15,840 (1 inch=1,320 feet), and mapped at a suitable scale between 1 inch and 4 inches to the mile. Federal assistance may be extended to share in the cost of reproducing the final forest maps at 1 inch to the mile.

Reforestation

- (1) The Province undertakes to maintain its program for the reforestation of unoccupied provincial Crown lands at a level at least equal to the average of the three preceding years. Such lands may include those owned by a public authority within the province (e.g., a municipality or a conservation authority) if they are under the control of the Province for reforestation purposes.
- (2) The Federal Government undertakes to pay an amount of ten dollars for each unit (1,000 trees) reforested by planting and one dollar for each unit (one acre) reforested by seeding on such lands, provided that the conditions mentioned above are fulfilled. An incentive is thus provided for the expansion of reforestation programs on denuded provincial lands which are not under lease or licence.
- (3) In addition to the above, the Federal Government undertakes to pay one-fifth of the cost to the Province of establishing and operating new nurseries—that is, nurseries not yet in actual production—irrespective of what proportion of the nursery output is to be used for planting on public, licensed, or private lands.

General

- (1) The Province agrees to furnish the Minister of Northern Affairs and National Resources with an over-all plan for the completion of the forest inventory, and to submit annual inventory programs and reports on work carried out under the agreement each year. Similar clauses are included with respect to reforestation.
- (2) The Minister's approval of all projects involving federal payments is required, and provision is made for examination of such projects by his representatives before payment. Sharable cost projects may be carried out either directly by agencies of the provincial government, or by private agencies under contract with the Province. The approval of the Minister is necessary with respect to any contracts relating to work performed under the agreement.
- (3) Expenditures made by the Province, for which the latter is reimbursed by some other person or agency, are not sharable by the Federal Government.
- (4) Matters relating to accounting, auditing, and the submission and payment of claims for reimbursement, are dealt with from federal standpoint by officers of the Comptroller of the Treasury's staff, working in co-operation with the Forestry Branch representatives.

ADMINISTRATION OF THE AGREEMENTS

In order to carry out the duties and responsibilities devolving upon the Forestry Branch of the Department of Northern Affairs and National Resources in connection with the administration of the agreements, a Provincial Agreements Section was established in the Forestry Operations Division of this Branch. Liaison Officers assist the Branch's District Forest Officers in the performance of these administrative duties in the field. A spirit of co-operation and mutual goodwill between provincial and federal officials has prevailed from the outset.

In harmony with this co-operative approach, federal liaison duties are by no means confined to the examination of programs and reports submitted by the provinces or to inspection of projects in the field. Of equal importance are discussions and consultations with provincial officers prior to the preparation of programs, and on the technical details of projects proposed or in progress. It has thus been possible for example to effect substantial savings in some of the forest inventory programs by making sure that full advantage is taken of all existing material, such as air photographs, ground control, and base maps, suitable for the purposes of the inventory. This in turn is made possible by the excellent co-operation received from the Surveys and Mapping Branch and the National Air Photo Library of the Department of Mines and Technical Surveys, the Royal Canadian Air Force, and other federal agencies. On the principle that two heads are better than one it may not be unreasonable to assume that co-operation between federal and provincial departments, both charged with the responsibility for expenditure of public funds, will provide double assurance that such funds are wisely spent.

SCOPE OF WORK UNDERTAKEN

Reforestation.—Planting programs in a number of the provinces have been substantially increased in accordance with five year reforestation plans. In an effort to avoid the high costs and labour shortage problems associated with planting operations and at the same time to speed up reforestation programs, serious attention is being given in some quarters to the possibilities of direct seeding. Thus far however seeding has been carried out on an experimental basis only.

During the first year of the agreements, provision was made for federal participation in reforestation programs by four of the provinces—British Columbia, Saskatchewan, Ontario and Prince Edward Island—and in subsequent years with Manitoba and Nova Scotia. About 48,000,000 trees were planted on nearly 50,000 acres, 6,500 acres were seeded, and four new nurseries were established in the first four years of the agreements. The Federal Government's share of the cost amounted to \$547,802.

REFORESTATION UNDER THE FORESTRY AGREEMENTS TO MAR. 31, 1955

Province	Trees Planted		Area Planted		Area Seeded

Forest Inventory.—The five year programs of the seven provinces with which inventory agreements have been signed provide, in the aggregate, for inventory surveys covering a gross area somewhat in excess of 1,000,000 sq. miles, including work carried out prior to the execution of the agreements and inventory data supplied to the provincial governments by the forest industry. In some provinces all operations required in connection with the provincial inventory survey, including any necessary ground control, base mapping, and photography, are undertaken by provincial government departments. In most cases however some or all of the inventory operations are being carried out under contract by private agencies. The forest services of most provinces whose inventory surveys are being made under federal-provincial agreements are undertaking the actual forestry work—that is, interpretation of photographs for forest data, field sampling, and preparation of forest maps and inventory reports.

A summary of progress toward the completion of these inventories up to Mar. 31, 1955 is given in the following table. Some of the figures listed are preliminary and are subject to later correction.

PROGRESS IN FOREST INVENTORIES UNDER THE FEDERAL-PROVINCIAL
AGREEMENTS TO MAR. 31, 1955

Project Class	Estimated Area to be Covered	Approximate Area Covered			
		Prior to Fed.-Prov. Agreements	Under Fed.-Prov. Agreements		Total to Date
			Prior to 1954-55	Fiscal Year 1954-55	
	sq. mi.	sq. mi.	sq. mi.	sq. mi.	sq. mi.
GROUND CONTROL SURVEYS.....	397,000	107,000	198,000	86,000	391,000
AIR PHOTOGRAPHY.....	1,207,000	461,000	504,000	105,000	1,070,000
Small scale.....	742,000	246,000	325,000	74,000	645,000
Medium scale.....	465,000	215,000	179,000	31,000	425,000
BASE MAPS.....	1,037,000	289,000	451,000	156,000	896,000
Small scale.....	682,000	74,000	376,000	130,000	580,000
Large scale.....	355,000	215,000	75,000	26,000	316,000
FIELD SURVEYS FOR FOREST DATA.....	952,000	157,000	366,000	127,000	650,000
INTERPRETATION OF PHOTOGRAPHS.....	1,097,000	162,000	449,000	124,000	735,000
FOREST MAPS.....	1,037,000	84,000	347,000	74,000	505,000
INVENTORY REPORTS.....	1,037,000	53,000	443,000	69,000	565,000

This program, which relates only to those provinces with which federal-provincial agreements have been concluded, obviously represents a surveying task of considerable magnitude. During the first four years of operation under the agreements the total federal share of the cost of forest inventories was \$3,630,223. This sum, together with the federal portion of reforestation expenditures, resulted in combined payments by the Federal Government to the provinces of \$4,178,025 under the forestry agreements since their inception.

Recent Advances in Forest Management Programs.—During recent years an increasing interest has been shown by governments and industry alike in programs to stimulate production of forest products and at the same time perpetuate the forest resources of Canada. Most of the provinces require timber operators on Crown lands to submit forest inventories of their cutting areas and to prepare management plans covering operations for a stated period of time.

In 1955 the Province of New Brunswick set up a Forest Development Commission to study and report on the state of the forest resources of the Province and their protection, utilization, management, and development for all purposes.

The Provinces of Nova Scotia and Ontario have each appointed an Advisory Committee composed of representatives of the provincial government, the forest industries and other organizations interested in the welfare of the forests, so that forest problems can be discussed and a concerted effort made to solve them for the benefit of all. Efforts are being made, especially in Quebec and Ontario, to encourage the establishment and maintenance of forests on a community basis.

Saskatchewan has taken an effective step towards conservation of its forest resources by curtailing the annual cut to an amount approximating 5 p.c. of the estimated stand of merchantable spruce saw-timber in each particular district.

In British Columbia, under authority of an amendment in 1947 to the British Columbia Forest Act, forest management licences provide a form of long term forest tenure aimed at stabilizing the forest industry and insuring adequate and continuous timber supplies for the future. In addition to the management licences the Public Working Circle System is provided to supply the needs of the small operator, and differs from the management licence in that the government manages the area although the logging is done by the

operator. The timber is sold by auction in the same manner as the regular timber sales. Access roads are built by the government. In 1955 a Royal Commission was set up by the British Columbia Government to study the results obtained by the forest management licence system and to report on the forest resources generally of the Province.

The use of air photographs for forestry purposes is a comparatively new field in which progress has been made both in research and in practice (*see* p. 472). By the use of such photographs the Forestry Branch of the Department of Northern Affairs and National Resources has been continuing work on the aerial forest mapping of federally administered lands and other territories. Forest inventory maps for example were prepared from air photographs for portions of the Yukon and Northwest Territories and data were collected on the ground to support the interpretation of the photographs. The development of instrumental aids in forest photography and in interpretation is being continued.

Timber Control.—The formal control of timber by the Timber Controller, as established during the war years, ceased on Mar. 31, 1950. Since that date the only controls have been those exercised through licences for the export of logs and pulpwood, required under the authority of the Export and Import Permits Act.

Subsection 2.—Forest Fire Protection

The Federal Government is responsible for fire protection in the forests under its administration—chiefly those of Yukon Territory and the Northwest Territories, the National Parks, Indian lands, military reserves and Forest Experiment Stations. Each of the provincial governments, except that of Prince Edward Island, maintains a fire protection organization co-operating with owners and licensees for the protection of timbered areas, the cost being distributed or covered by special taxes on timberlands.

In each province except Prince Edward Island provincial legislation regulates the use of fire for clearing and other legitimate purposes and provides for the closing of forests to travel or work during dangerous periods. The Province of Quebec has organized a number of co-operative protective associations among lessees of timber limits. These associations have their own staffs, which co-operate with those of the Board of Transport Commissioners and the provincial government. The latter contributes towards fire suppression costs and also pays for the protection of vacant Crown lands lying within the area of the associations' activities. In the Province of Newfoundland responsibility for the protection of most licensed timberlands is vested in the lessees. The Newfoundland Forest Protection Association, maintained jointly by the provincial government and industry, carries out certain important fire control functions.

The provincial services of forest fire protection along railway lines are assisted by the Railway Act, administered by the Board of Transport Commissioners which has wide powers relating to fire protection along railway lines under its jurisdiction. Certain officers of the various forest authorities are appointed *ex officio* officers of the Board of Transport Commissioners and co-operate with the fire ranger staffs which, under the Railway Act, the railway companies are required to employ.

In many districts in Canada radio equipped aircraft are used to good effect for the detection and suppression of forest fires. Where lakes are numerous seaplanes or flying boats can be used for fire detection and for transportation of fire fighters and their equipment to fires in remote areas especially. In Ontario water bombing of small fires is regularly practised and in some districts helicopters are being used in fire suppression work. Equipment and supplies are sometimes dropped by parachute to isolated fire crews and in Saskatchewan parachutists are employed to fight fires that are difficult to reach.

Fire detection in more settled areas is carried out from lookout towers fitted with telephone or radio for reporting and fire fighting crews and equipment are maintained at strategic points. These crews, when not engaged on fire suppression duties, are employed on the construction and maintenance of roads, trails, telephone lines, fire guards and other improvements.

Portable gasoline pumps and linen fire hose are important items of equipment and are carried by canoe, motor boat, automobile, aircraft, pack-saddle or back-pack. The pumps provide hose pressures of up to 250 lb. per sq. inch, depending upon the elevation above and distance from the water supply; hose lines of over a mile in length are frequently used. Small hand pumps supplied by 5 gallon portable containers are also effective. Bulldozers and ploughs are commonly used for fire line construction and trucks fitted with water tanks and power pumps are employed for the control of fires adjacent to roads. Despite the provision of these mechanical aids more than 50 p.c. of all fires are fought with hand tools.

The various government forest authorities conduct forest conservation publicity independently and in co-operation with the Canadian Forestry Association. Since its beginning in 1900 the CFA has played an important part in securing popular co-operation in reducing the fire hazard. By means of its magazine, which has a large circulation, by railway lecture cars and motor trucks provided with motion picture equipment, and by co-operation with radio broadcasting stations and the press, the Association reaches a large proportion of the population of Canada. Efforts are made through the schools, by specially appointed junior forest wardens and other means, to educate the younger generation on the value of the forests and on the seriousness of the devastation caused by fire and the means of preventing such devastation.

Forest Fire Statistics.—During 1954 there were 3,022 forest fires in Canada compared with 6,440 in 1953 and an average of 5,434 for the period 1944-53. This is the smallest number of forest fires since 1929, the year in which the Forestry Branch of the Department of Northern Affairs and National Resources commenced keeping detailed, countrywide, forest fire records.

Probably the best available indicator of forest fire loss is the *area* burned. In 1954 for example only slightly more than a quarter of a million acres were damaged or destroyed; this was about one-sixth the annual average loss during the ten year period ending in 1953, and only 43 p.c. of the next lowest loss in any one year. The small acreage burned in 1954 was directly reflected in the 88-acre average fire for the year as compared with the 292-acre ten year average—the alltime low recorded. The estimated values destroyed in 1954 were only 37 p.c. of the 1953 losses and 40 p.c. of the average annual loss over the previous ten years.

During 1953 Newfoundland had one of the best fire seasons it had experienced for many years, the total area burned being less than 15 p.c. of the average for the preceding four years. In Nova Scotia spring fires accounted for about 70 p.c. of the area burned during the year but the fire season as a whole was considered to be about average. New Brunswick did not have a severe fire season; 1953 however was a bad year for Quebec, with most portions of the Province having some periods of very dry weather; there were more than twice the usual number of fires and the area burned amounted to more than ten times the average for the previous ten years. In Ontario October and the early part of November were exceptionally warm and dry and throughout the whole fire season the general weather pattern was fair and warm. The hazardous fire season in Manitoba commenced in April when the northern regions experienced hot, dry weather which continued until the end of June; another dangerous period developed in late July and August. Rainfall in Saskatchewan was inadequate over the forested areas during April, May and June and 98 p.c. of the losses for the year occurred during that period. Alberta and British Columbia were favoured with light fire losses as there were no prolonged periods of dry weather. The Northwest Territories experienced a severe fire season which ran from April to August, the latter month being particularly warm and dry. The three fires which burned in Yukon Territory during July accounted for more than 80 p.c. of the area lost during the entire year but generally the fire season was not considered hazardous.

During 1954, owing largely to above normal precipitation, Newfoundland enjoyed an excellent season from a fire protection standpoint. In Nova Scotia the number of forest fires in the spring was greater than the average for the previous decade, and about

three-quarters of the area burned was lost during April and May. New Brunswick did not have a serious fire season; the number of fires was half that of the previous year and three-quarters of the ten year average for the Province. This easy fire season was generally experienced westward across Canada. In Ontario heavy precipitation kept fires below normal, the greatest number occurring in July. In Manitoba the number of fires reported was less than half the average for the previous decade and the total area burned was only about one-twentieth the annual average. The season was cool and wet in Saskatchewan and the 57 fires which occurred during the year were less than half the average number for the previous decade. Although over-all fire losses were less than one-third the annual average the whole of 1954 was a fire season in Alberta: fires were reported every month. In British Columbia losses were the lowest since 1913; and the 116 lightning fires reported were about one-quarter the average number recorded annually over the past decade. In the Northwest Territories and the Yukon in general the weather was on the side of the fire fighters. However in the area from Norman Wells to Aklavik the season was dry and fire losses were heavy, especially on the reindeer ranges.

4.—Summary Statistics of Forest Fire Losses 1953 and 1954 compared with Ten Year Average 1944-53

Subsection 3.—Research in Forestry

In the field of forestry the chief responsibility of the Federal Government is to carry out research in problems affecting the forests of Canada and their development, conservation and more effective utilization. To this end forest research and forest products research facilities have been expanded greatly throughout Canada during the past five years. The Federal Government, several provincial governments, the Pulp and Paper Research Institute of Canada, the four universities with faculties of forestry, and a number of the larger industrial companies conduct research in these fields. The Forestry Branch of the Federal Department of Northern Affairs and National Resources conducts research in forest economics, silviculture, management, forest inventory methods, forest fire protection and in forest products. An extensive program of research is under way on the government experiment stations and on other lands, where an increasing proportion of the total effort is being expended in co-operation with provincial authorities and industry.

Forest Research.—Research in silviculture and management has been concentrated upon problems of regeneration, growth and stand development, and harvest cutting methods. A regeneration survey extending from the Rocky Mountains to the Atlantic Coast has provided information on the status of regeneration on cut-over and burned lands. This has been followed by intensive work of a more fundamental nature to assess the factors responsible for the success or failure of regeneration and, by empirical tests of practical cutting methods, seed-bed treatments, and seeding and planting methods, to obtain reproduction. Studies are made of the growth, yield and successional changes in the most important forest types. Systems of classifying forest sites are being devised so as to assess their effective growth, development and long term productivity. Research in tree breeding is being carried on for artificial propagation by selection and development of superior strains. In forest management, research is concerned with the application of silviculture, regulation of cut, and protection so as to maintain forests at the highest production levels. Many of the studies in silviculture and forest management are conducted co-operatively with provincial forest services and wood-using industries.

Forest fire protection in Canada is a vital problem and is therefore a major concern of federal authorities. In forest fire research the Federal Forestry Branch is working towards full co-operation with the provincial forest services in achieving the best methods of forest fire protection. The leading contributions of the Branch have been in the field of fire hazard research and in the development of equipment and techniques for fire fighting. Some of the more important studies being undertaken at present include the development

of fuel-type classification methods and mapping techniques, the development of a method for rating fire season severity and fire protection organization efficiency, and the testing of fire suppression equipment, such as back-pack tanks and forestry hose.

A number of provincial forest protection services are also engaged in research activities and notable advances have been made in several provinces in the development of forest communications equipment, the dropping of supplies to fire fighters by parachute, and the design of mechanical fire fighting equipment.

Research in forest inventory methods is of increasing importance because of the greatly expanded inventory programs being conducted in most provinces. Data from air photographs are correlated with field work to develop new techniques of timber estimating, which is being facilitated by the use of stand volume tables. Various methods of field sampling are being investigated and compared. Research is being continued in methods for measuring tree images and tree shadows to determine heights, crown widths, canopy density and other data from photographs taken in different seasons of the year under various conditions. The use of large scale photography of sample areas is also being investigated and studies are being made in the identification of species and sub-types. Construction of suitable photogrammetric and other scientific apparatus includes those required by the forestry tricamera method of air photography which has been developed to provide maximum forestry information at minimum cost, and the shadow height calculator, constructed to facilitate the determination of tree heights from shadows in air photographs.

Research in forest economics is concentrated on problems associated with the production of wood in the forest and are concerned with land use, land tenure, taxation, forest legislation and administrative techniques, forest management, forest labour and the valuation of forest lands. Economics research also involves continued study of the broad developments in forest industries.

Forest Biology.—The Division of Forest Biology of the Science Service, Federal Department of Agriculture, undertakes investigations dealing with the biology and control of insects and diseases affecting forest and shade trees. The Zoology Unit maintains ten regional laboratories at strategic points across the country. The Forest Pathology Unit operates six branch laboratories. A laboratory was recently established at Sault Ste. Marie, Ont. for fundamental research on virus, fungi and bacterial diseases of insects.

A special article dealing with Noxious Forest Insects and Their Control appears in the 1947 Year Book, pp. 389-400. A detailed account of the activities in forest pathology in Canada may be found in the 1948-49 Year Book, pp. 416-417.

The Spruce Budworm.—One of the largest and most dramatic chemical control operations ever undertaken against forest insects has been under way since the summer of 1952 against the spruce budworm in New Brunswick. The budworm is a defoliating insect which has seriously threatened the pulpwood forests in the northern half of the Province. By Mar. 31, 1955 a total of 3,600,000 acres had been sprayed from aircraft and 600,000 acres re-sprayed. At one stage in the spraying, studies showed from 87 to 99 p.c. mortality among the budworm larvæ. Plans for 1956 include spraying another 2,000,000 acres of forest using about 70 aircraft, operating from 12 airfields. Cost of the operation is being shared between the Federal Government, the Government of New Brunswick and the forest industries in the areas affected, the Federal Government paying the Provincial Government one-third of the cost of the operation, up to a maximum of \$3,000,000. The original three-year cost-sharing Agreement between the Federal Government and the Government of New Brunswick, ending Mar. 31, 1956, has been extended for a further three years. The Agreement is administered by the Forestry Branch of the federal Department of Northern Affairs and National Resources.

Forest Products Research.—A special article outlining the history of the Forest Products Laboratories of Canada and describing their activities appears in the 1955 Year Book, pp. 455-461.

Section 6.—Forest and Allied Industries

This Section is concerned with the many industries employed in the felling of timber in the forest and its transformation into the numerous utilitarian shapes and forms required in modern living. The basic industries provide the raw material for sawmills, pulp and paper mills and for a wide range of secondary industries that convert the products of the basic industries into more highly manufactured goods such as veneers and plywoods, sash and doors, furniture and a vast range of industries using wood in any form in their processes. These industries, especially the pulp and paper industry and the lumber industry, contribute substantially to the value of the export trade of Canada and thereby provide the exchange necessary to pay for a large share of the imports purchased from other countries, particularly the United States.

Subsection 1.—Woods Operations

In connection with operations in the woods the forests provide not only the raw materials for the sawmills, pulp mills, wood distillation, charcoal, excelsior and other plants, but also the logs, pulpwood and bolts for export in the unmanufactured state, and fuel, poles, railway ties, posts and fence rails, mining timber, piling and other primary products which are finished in the woods ready for use or export. A number of minor forest products help swell the total, such as Christmas trees, maple sugar and syrup, balsam gum, resin, cascara, moss and tanbark.

It has been estimated that operations in the woods during the logging season in 1953 gave employment amounting to 40,794,000 man-days and distributed \$463,000,000 in wages and salaries.

7.—Value of Woods Operations by Product 1948-53

Product	1948	1949	1950	1951	1952	1953

¹ In estimating the annual drain on Canada's forest resources, certain converting factors have been used, each of which represents in cubic feet the quantity of merchantable wood used to produce one unit of the material in question. The factor for logs and bolts for the British Columbia coastal region is 175 and for the rest of Canada 200. Other factors: pulpwood 85, fuelwood 80, hewn railway ties 5, poles and piling 15, fence posts 1.2 and wood for distillation 80.

Subsection 2.—The Lumber Industry

The manufacture of sawn lumber is the second most important industry in Canada depending on the forest for its raw materials.

The total number of sawmills, tie, shingle, lath, veneer, stave, heading and hoop mills and mills for cutting-up and barking or rossing of pulpwood, reports of which were compiled for 1954, was 7,696 as compared with 8,194 in 1953. Mills sawing less than 15,000 ft. b.m. are excluded but account for less than one-half of one per cent of the total lumber production. Employees numbered 57,010 and wages and salaries amounted to \$139,571,531. The logs, bolts and other materials and supplies of the industry were valued at \$301,118,370, the gross value of production was \$572,186,498 and net value \$263,629,457.

Lumber production in Canada reached its maximum in 1953 at 7,305,958,000 ft. b.m. Average values were fairly uniform until 1916 but increased rapidly from 1917 to 1920 to decline gradually during the following years to the lowest level for the entire period in 1932. With the exception of 1938 and 1949 increases took place each year from 1933 to 1951; decreases of 2.8 p.c., 4.7 p.c. and 1.5 p.c. occurred in 1952, 1953, and 1954.

10.—Quantity and Value of Lumber Production and Value of All Sawmill Products by Province 1953 and 1954

Lumber Exports.—Exports of planks, boards and square timber are given in Chapter XXII, Foreign Trade.

Subsection 3.—The Pulp and Paper Industry*

The manufacture of pulp and paper has been the leading industry in Canada for many years and the postwar development of the industry has more than kept pace with the vast industrial growth of the nation. Pulp and paper stands first among all industries in value of production, in exports, in total wages paid and in capital invested. It is the largest consumer of electric energy and the largest industrial buyer of goods and services, including transportation, in the land. The industry has a newsprint output about five times that of any other country and provides over 50 p.c. of the world's newsprint needs. Canada is one of the world's greatest woodpulp exporters and stands second only to the United States as a producer of pulp. Thus, this Canadian industry, with 80 p.c. of its output moving abroad, ranks as one of the major industrial enterprises of the world.

There are three classes of mills in the industry. In 1953, 34 of these were making pulp only, 24 were making paper only and 69 were combined pulp and paper mills. In 1954 there were 31 mills making pulp only, 25 making paper only, and 69 were still combined pulp and paper mills.

The industry includes three forms of industrial activity: operations in the woods with pulpwood as a product, the manufacture of pulp and the manufacture of paper. Some of the important pulp companies operate sawmills to utilize the larger timber on their limits to the best advantage, and some lumber manufacturers divert a portion of their spruce and balsam logs to pulp mills. Less than 15 p.c. of the pulpwood cut in Canada is exported in raw or unmanufactured form and a large portion of such exports is cut from private lands.

* A special article on the pulp and paper industry appears in the 1952-53 Year Book, pp. 467-475.

13.—Production, Consumption, Exports and Imports of Pulpwood 1944-54

NOTE.—Figures for earlier years will be found in the corresponding table of previous Year Books.

¹ Given in terms of rough or unpeeled wood.² Newfoundland included from 1949.

Pulp Production.—The manufacture of pulp, the second stage in this industry, is carried on by mills producing pulp only and also by paper manufacturers operating pulp mills in conjunction with paper mills to provide their own raw material. Such mills usually manufacture a surplus of pulp for sale in Canada or for export. Spruce, supplemented by balsam fir in the east and by hemlock in the west, is the most suitable species of wood for the production of all but the best classes of paper.

The preliminary preparation of pulpwood is frequently carried on at the pulp mill, but there are also a number of 'cutting-up' and 'rossing' mills operating on an independent basis, chiefly for the purpose of saving freight on material cut at a distance from the mill or on material intended for export. Pulpwood is measured by the cord (4' by 4' by 8' of piled material). One cord of rough pulpwood contains approximately 85 cu. feet of solid wood and one cord of peeled pulpwood 95 cu. feet.

Of the total 1953 pulp production 74.3 p.c. was made in combined pulp and paper mills by companies manufacturing paper. The remainder was made for sale in Canada or for export. Over 56 p.c. was groundwood pulp and 17 p.c. unbleached sulphite fibre, these being the principal components of newsprint paper. Bleached sulphite, bleached, semi-bleached and unbleached sulphate, soda fibre, semi-chemical, other grades and groundwood and chemical screenings made up the remainder. A considerable market has developed for screenings in connection with the manufacture of rigid insulating boards.

The manufacture of the 9,077,063 tons of pulp produced in 1953 entailed the use of 11,680,418 cords of rough pulpwood valued at \$329,087,065 and the equivalent of 440,040 rough cords of other wood (i.e., sawmill chips, slabs and edgings, sawdust, butt cores, etc.) valued at \$9,476,414. The total value of materials used in the manufacture of pulp was \$388,247,735.

The 1954 figures show that pulp production included 55 p.c. groundwood pulp and 17 p.c. unbleached sulphite fibre of the total of 9,673,016 tons manufactured. This total was secured from 12,580,630 cords of rough pulpwood valued at \$332,853,603 and the equivalent of 694,880 rough cords of other wood such as sawmill chips, slabs and edgings, etc., valued at \$11,774,974. Total value of materials used amounted to \$400,232,857. In 1954, as in 1953, nearly three-quarters (72.9 p.c.) of the pulp was produced in combined pulp and paper mills by companies manufacturing paper.

Pulp Exports.—The chief market for Canadian newsprint and pulp is the United States. Prior to the War this market alone absorbed about 85 p.c. of the pulp exports and 80 p.c. of the newsprint exports. In 1945 the proportions were 76 p.c. and 83 p.c. respectively and in 1953 and 1954, 77 p.c. and 88 p.c. respectively.

World Pulp Statistics.—Figures of production, exports and imports of pulp for certain countries of the world have again become available after the interruption caused by World War II and are shown for 1953 and 1954 in Table 17. It is estimated that these countries produce approximately three-quarters of the world supply of pulp.

Paper Production.—During 1954 there were 94 establishments producing paper and paper board in Canada as compared with 93 in 1953. In addition to newsprint Canadian mills have a highly developed production of fine paper, wrapping paper, tissues, paper board and other cellulose products.

¹ Slightly lower than DBS figures given in Table 18, p.480, owing to the exclusion, by the Association, of certain paper not classed as newsprint.

Statistics of the Combined Pulp and Paper Industries.*—The manufacture of pulp, the manufacture of paper and the manufacture of products made of paper may under certain conditions be treated as three industries for they are frequently carried on in separate plants by entirely independent companies. The manufacture of basic stock and the converting of this paper into stationery and other highly processed paper products are often combined in one plant. This further converting of paper within the pulp and paper industry itself represents only a small part of Canada's production of converted paper and boards the bulk of which is still made in special converting mills classified in other industrial groups.

The presence of these different combinations in one mill makes it difficult to separate many of the statistics relating to the manufacture of pulp, basic paper and converted paper products. All converting operations carried on in paper mills in this industry are attributed to the particular industrial group of converting plants to which they properly belong. Including manufacturing operations as far as the basic paper making stage there were altogether 125 mills in operation in 1954—two less than in 1953. The employees numbered 60,837 and their salaries and wages amounted to \$252,598,383, as against \$235,741,660 the previous year. If the pulp made for their own use in combined pulp and paper mills is disregarded the total value of materials and supplies used in the industry as a whole can be considered as amounting to \$515,257,595 in 1954, \$499,350,994 in 1953, \$497,046,828 in 1952 and \$483,014,009 in 1951; the gross value of production as \$1,241,558,451 in 1954, \$1,179,665,443 in 1953, \$1,157,887,657 in 1952, and \$1,237,897,470 in 1951; and net value of production \$641,410,070 in 1954, \$599,934,934 in 1953, \$584,101,072 in 1952, and \$679,257,743 in 1951.

The pulp and paper industry is one of the leading single manufacturing industries in Canada. In 1954 as in 1953 it was first in net value of production, in gross value of production and in salaries and wages paid, and rose from second to first place in employment. The manufacturing stages only of the industry are considered in these comparisons, no

* See Chapter XV for further particulars regarding the pulp and paper and paper converting industries.

allowance being made for capital invested, men employed, wages paid or primary products sold in connection with the woods operations. These form an important part of the industry as a whole but cannot be separated from woods operations carried on in connection with sawmills and other industries. In world trade, pulp and paper are generally Canada's main commodities—usually more important than wheat and far more important than nickel. Newsprint alone, over a considerable period, has brought Canada more export dollars than wheat, nickel or any other single commodity.* The United States market absorbs annually over 87 p.c. of all pulpwood exports and over 84 p.c. of the pulp and the paper shipments of Canada. About 50 p.c. of the paper consumed in the United States is either of Canadian manufacture or is made from wood or pulp imported from Canada.

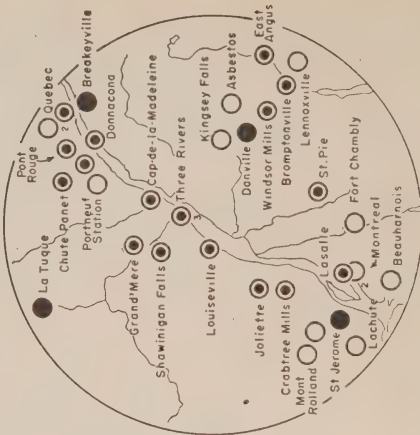

The Map below and those on the following three pages show the distribution of pulp and paper manufacturing in Canada.

* For reasons given in Section 1, Part II of the Foreign Trade Chapter, gold is excluded from Canadian trade statistics.

Subsection 4.—The Veneer and Plywood Industries*

The production of hardwood plywood in Canada is confined largely to the eastern provinces. Changes in manufacturing methods applied to hardwood plywood resulted in its adaptation to many uses, particularly to attractive wall finishes for homes and other buildings, flush doors, radio and television cabinets and other home and office furniture.

Softwood plywood is produced almost entirely in British Columbia. Douglas fir is most commonly manufactured because of the availability of large diameter logs of this species from which large sheets of clear veneer can be obtained. The use of synthetic resin adhesives is responsible for this product that has become almost indispensable to the construction industry—for wall panels, concrete forms, roofing, sheeting, house sub-floors; for construction of silos, cribs and caissons; for box-car linings, bus bodies, trailers, power driven and other types of watercraft; for box panels and crate linings, case goods and core-stock for furniture; for plywood-faced doors and for many other uses.

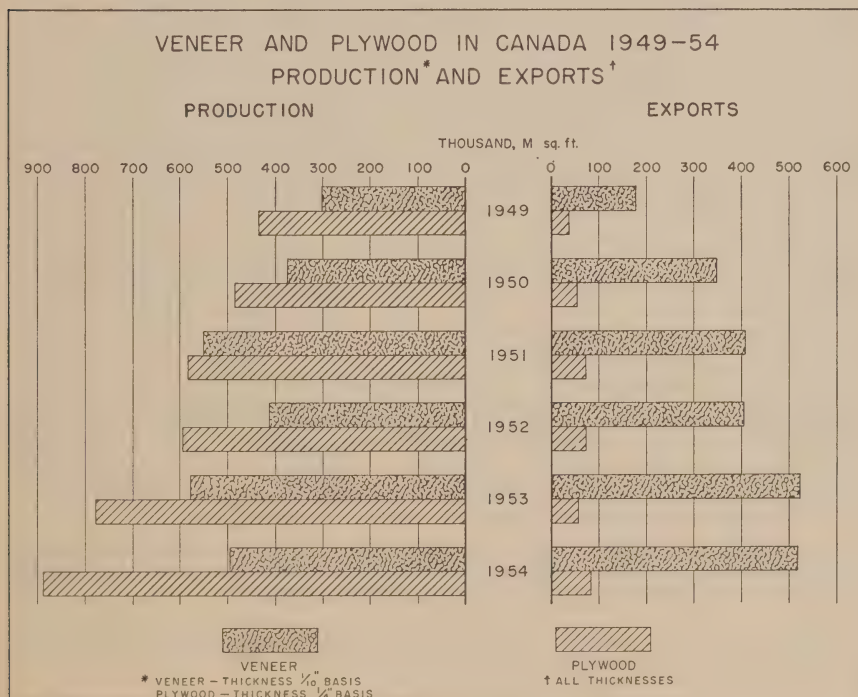

The heating of glued veneers in moulds by high-frequency electric fields (dielectric heating) permits the manufacture of shaped plywood which is now being used for furniture, radio cabinets and similar products. The possibilities of this development are becoming more widely appreciated.

* Prepared by the Forest Products Laboratories, Forestry Branch, Department of Northern Affairs and National Resources, Ottawa.

Veneers of Canadian manufacture are not confined to species native to Canada. A number of imported woods of special decorative value are veneered successfully and provide the furniture industry with a wide choice of finishes. Exports of veneer and plywood produced in Canada have increased in value from \$969,256 in 1938 to a high of \$30,103,676 in 1955.

Subsection 5.—The Wood-Using Industries

The wood-using group comprises thirteen industries,* other than sawmills and pulp mills, using wood as their principal raw material. Most of these industries obtain from the sawmills the wood they transform into planed and matched lumber, boxes, barrels, furniture, caskets and other manufactured or semi-manufactured products but the veneer and plywood and excelsior industries usually manufacture their products direct from logs and bolts.

This wood-using group does not include every industry into which wood enters as a raw material but only those producing commodities where the chief component is wood. There are a number of industrial groups in which wood is an important raw material as in the manufacture of agricultural implements, musical instruments, etc., and others such as the manufacture of machinery in which wood is necessary but only in comparatively small proportions.

Wood is used indirectly in the manufacture of all-metal products such as wooden patterns and wooden foundry boxes in making metal castings. Wood in the form of barrels, boxes and other containers also enters into the distribution of commodities of all kinds.

In 1953 the wood-using group, comprising 4,268 establishments, gave employment to 73,377 persons and paid out \$183,488,249 in salaries and wages. The gross value of its products was \$661,321,108 and the net value \$308,315,617.

The importance of secondary industry in providing employment will be appreciated when it is noted that the number of employees in the wood-using group was more than 73,000, as compared with sawmills with approximately 61,000 employees and pulp and paper with about 58,000 in 1953.

Subsection 6.—The Paper-Using Industries

The paper-using group comprises three industries† engaged primarily in manufacturing commodities of paper and paperboard. Establishments engaged in printing, publishing, bookbinding and the allied graphic arts also consume large quantities of these materials but under the standard industrial classification adopted by the Dominion Bureau of Statistics in 1948 they are grouped separately.

Some paper-using establishments purchase paper as a raw material from the pulp and paper industry and merely subject it to some form of treatment to fit it for further manufacture in some other industry. This occurs in the manufacture of coated, sensitized

* Furniture; sash, door and planing mills; veneer and plywood; hardwood flooring; boxes, baskets and crates; wood-turning; coffins and caskets; cooperage; woodenware; lasts, trees and wooden shoe findings; beekeepers' and poultrymen's supplies; excelsior; and other wood-using industries.

† Paper boxes and paper bags; miscellaneous paper goods.

or corrugated paper. Other firms purchase paper and subject it to some treatment to fit it for a definite final use such as in the manufacture of asphalt roofing or waxed wrapping paper. Another large group uses paper and paperboard as a raw material for conversion into paper bags, boxes, envelopes, laminated wallboard and other commodities.

The manufacture of containers and packages of various kinds has grown very rapidly since ways have been found of converting tough and cheap paper stocks into strongly made boxes which compete very favourably with the wooden crates and packing cases used formerly. Small attractive paper containers for use in the retail trade are growing in favour with the purchasing public and constitute an important branch of the paper-using industries.

Composition roofing and sheathing, consisting of paper felt saturated with asphalt or tar and in some cases coated with a mineral surfacing, is being increasingly used as a substitute for metal roofing, wooden shingles and siding materials. Wood-fibre building boards, some of which are produced by lamination in the paper-using industries, are now used extensively in construction, especially for insulating purposes, replacing lumber and wood lath.

The growth of the paper-using industries in Canada since 1923 reflects these developments. In 1923 the 152 establishments in this group employed 6,870 persons, distributed \$7,442,102 in salaries and wages and produced goods valued at \$31,760,948. In 1953 these industries comprised 428 plants, provided employment for 26,242 persons whose earnings totalled \$74,366,047 and produced products worth \$388,585,078.

Subsection 7.—Printing, Publishing and Allied Industries

The printing trades group is made up of five closely related industries: printing and publishing, comprised of publishers who operate printing plants; printing and bookbinding, including general or commercial printers and bookbinders; lithographing, comprised of plants specializing in that process; engraving, stereotyping and electrotyping, including photo-engraving; and trade composition or typesetting for printers. A sixth industry covering publishers of periodicals who do not print their own publications has been included since 1949. Although strictly speaking these publishers are not manufacturers they are closely related to the printing trades which produce the plates, cuts, etc., and print newspapers, magazines, directories, yearbooks, almanacs, house organs and other periodicals for them.

In 1953 the manufacturing printing trades employed 61,602 persons whose earnings totalled \$195,727,205. Their output was valued at \$498,082,908 and the raw materials used and services received cost \$152,511,909.

Periodicals valued at \$207,578,676 accounted for 46 p.c. of the value of printed matter and other products, daily newspapers alone contributing \$149,623,043. The value of periodicals is made up of \$150,619,059 received from advertising and \$56,959,617 received from subscriptions and sales of publications. In addition the 1,413 publishers in the sixth industry reported revenues of \$30,204,724 from advertising and \$9,284,958 from sales of publications.

NOTE.—The interpretation of the symbols used in the tables throughout the Year Book will be found facing p. 1 of this volume.

Section 1.—Canada's Mineral Industry 1954-55*

The great expansion that took place in Canada's mineral industry from the end of World War II to 1951 is reviewed in the 1952-53 Year Book, pp. 476-495. That information has been brought up to the latest possible date in each succeeding issue of the Year Book and is continued in this edition for the period July 1954 to June 1955.

Developments during the latest period extended the evidence of the industry's growth potential. Most noteworthy was the commencement of shipments in midsummer 1954 from the great iron ore deposits in the Quebec-Labrador region, an operation rapidly developing into a major enterprise; expectations are that shipments in 1955 will reach 6,500,000 long tons. Of particular interest and importance too were the operations at the recently discovered uranium deposits in the Blind River area of Ontario which were nearing the production stage by mid-1955. These deposits are probably the largest so far discovered in Canada or elsewhere.

Headway was also made in other fields of mineral activity. Crude oil production continued to mount and at the end of the period was close to 400,000 bbl. a day compared with 296,200 bbl. in July 1954 and 260,000 bbl. in July 1953, the figures for July 1954 being the equivalent of about 51 p.c. of the mid-1955 daily consumption. Production of the base metals was at record levels during most of the period and the world demand for all of them, particularly for copper, was exceptionally strong; in fact the shortage of copper was becoming acute. Gold production was increasing, and towards the end of the period there was considerable improvement in the industry. Production of the principal industrial minerals was also at or near peak levels. The search for mineral deposits was the most active in years, with some of the provinces reporting the establishment of new records in the number of claims staked during the review period. In this search uranium has been receiving chief attention.

* Except where otherwise indicated, this review was prepared under the direction of Dr. G. S. Hume, Acting Deputy Minister of the Department of Mines and Technical Surveys, by G. H. Murray, Chief of the Editorial and Information Division, and Mrs. M. J. Giroux of the Editorial Staff.

The new mines entering production or nearing the production stage during the review period are referred to in detail below but it may be noted here that when fully developed these properties will have an estimated combined annual output of almost half a billion dollars. Production from the Quebec-Labrador deposits alone may eventually reach an annual value of \$200,000,000 to \$300,000,000 and indications are that uranium production will reach a gross annual value of \$100,000,000 within a few years. In addition exploratory work at several mining properties still far from production is disclosing large tonnages of ore and present high metal prices as well as the successful development of new low-cost ore-processing techniques are bringing numerous marginal deposits within economic range.

In contrast to the previous twelve month period when falling base metal prices and other factors made the prospects for the industry somewhat uncertain the outlook was seldom brighter than at the end of June 1955. Most of the industries in Canada and abroad that use metals and minerals in large quantities were operating at or near capacity with prospects of still greater activity. International tension had been eased considerably and earlier views that such a development might adversely affect the industrial outlook were being revised in the light of increasing evidence to the contrary.

One of the brightest features of the outlook however is the success that has been attending the search for new sources of mineral wealth in recent years, the discoveries in the Blind River and Manitouwadge areas of Ontario, in the New Quebec-Labrador region and in the Bathurst area of New Brunswick being excellent illustrations. It is significant that much of this wealth was found in areas that had already been prospected extensively. Coupled with the fact that most of the Canadian north has received only limited prospecting attention, this seems to assure a continuation of mineral discoveries for years to come.

Subsection 1.—The Metals

Several events of great significance to the metal mining industry highlighted the 1954-55 period, each of which will make a marked contribution to Canada's production of metals. In Quebec initial shipments of rich hematite iron ore from New Quebec-Labrador rolled into Seven Islands on the newly completed 360 mile Quebec and North Shore Railway from Iron Ore Company of Canada deposits at Schefferville (Knob Lake). In the western part of the Province the Chibougamau area's second copper-gold producer, Campbell Chibougamau Mines Limited, came into production in June 1955 at close to its rated capacity of 1,750 tons and, in the southern part of the Province, Gaspé Copper Mines Limited attained its first output of copper though at a rate far below initial capacity expectations because of lack of sufficient power. In British Columbia the first aluminum ingot was poured in August 1954 at the new Kitimat project of Aluminum Company of Canada Limited, the eventual completion of which will mean the doubling of Canada's annual output of aluminum (from imported ore) to 1,000,000 metric tons. In northern Manitoba Canada's second nickel producer, the Lynn Lake property of Sheritt Gordon Mines Limited, more than measured up to output expectations during its first full year of operation.

New disclosures of Canada's great mineral wealth were made in various parts of the country leading to the setting under way of additional large development projects. Uranium held the spotlight throughout the review period as a result of developments in the Beaverlodge area and the revelation that huge tonnages of low grade uranium ore exist in the Blind River area of northern Ontario. Large new sources of base metal wealth were discovered near the Bathurst find in New Brunswick and in the Northwest Territories exploratory and development activity disclosed extensive tonnages of good-grade lead-zinc ore over a mineralized belt 36 miles in length at Pine Point on the south shore of Great Slave Lake.

The expansionary trend in the industry is seen in the marked increase in the volume and value of metal production in 1954. Metals rose 13 p.c. in value over 1953 to \$799,916,000. Copper and nickel recorded the greatest gains, copper of \$24,759,000 to \$175,713,000 and nickel of \$19,743,000 to \$180,173,000. Lead increased \$8,174,000 in value to \$58,251,000 and gold \$9,167,000 to \$148,765,000. Zinc declined \$5,894,000 to \$90,207,000. In volume of output, copper rose 20 p.c. over 1953 to 302,732 tons, lead 13 p.c. to 218,495 tons, iron ore 13 p.c. to 7,362,000 tons, nickel 12 p.c. and silver 10 p.c. to 161,279 tons and 31,118,000 oz. t., respectively, and gold 8 p.c. to 4,336,000 oz. t. Zinc declined from 401,762 tons in 1953 to 376,491 tons in 1954.

Exports of the four principal non-ferrous base metals in all forms continued to go mainly to the United States and were valued at \$416,258,000, an increase of \$33,451,000 over 1953. Exports of refined copper increased from 132,000 tons in 1953 to 156,000 tons in 1954; of refined nickel from 80,000 tons to 91,000 tons; of refined lead from 103,000 tons to 117,000 tons; and of refined zinc from 158,000 tons to 206,000 tons. The United Kingdom purchased 51 p.c. more copper than in 1953, 9 p.c. more lead and 87 p.c. more refined zinc. The United States bought 14 p.c. more nickel and 20 p.c. more lead but 19 p.c. less copper and 3 p.c. less zinc.

Base metal prices improved markedly during the review period. Lead rose from 13.25 cents in July 1954 to 14.25 cents at the end of the year and remained steady throughout the rest of the period. Zinc increased from 11 cents to 12.85 cents at the end of 1954 and closed the period at 12.50 cents. Copper remained fairly steady at just over 29 cents during the latter half of 1954. However a growing shortage of the metal brought about by increased consumption combined with a greatly reduced production as a result of mine and smelter strikes led to a number of price increases during the first six months of 1955 and copper closed the period at 35.375 cents. Nickel was 57 cents until mid-November 1954 when it was increased to 64.50 cents.

Accounts of developments in metal mining on a regional basis follow:—

British Columbia.—British Columbia, the home of the famous Sullivan mine which is the largest lead-zinc-silver mine in the world, is Canada's largest producer of lead and zinc. These two metals account for two-thirds of the total value of the Province's metal output: copper, silver, gold, tungsten concentrates and iron ore in order of value, with minor amounts of cadmium, bismuth, antimony and tin, make up the remaining metal production. British Columbia ranks fourth among the provinces and territories in value of mineral production and is the only Canadian source of tungsten, antimony and tin.

Two factors have tended to slow down metal mining development in the Province: the relative inaccessibility of mountainous areas for exploration and development and the lack of sufficient hydro-electric power. The Geological Survey of Canada in its field work during 1953 and 1954 made some progress in assessing the mineral potential of mountainous areas by initiating the use of the helicopter for reconnaissance. The Coquitlam area immediately northeast of Vancouver was mapped on a scale of 1 inch to 4 miles, about five seasons' work in one—at half the cost of the slower ground methods, despite exceptionally unfavourable weather.

The importance of available low cost hydro power has been amply demonstrated by The Consolidated Mining and Smelting Company of Canada Limited which over the years has provided the power necessary to support the growth of its great enterprise and which only recently completed a \$35,000,000 plant on the Pend d'Oreille River, 12 miles south of Trail, to furnish the additional hydro power needed to carry out the extensive expansion and modernization of its productive facilities.

The Province's wealth of power resources has attracted to it a great new aluminum industry which will eventually make British Columbia a world source of aluminum (from imported ore). The Aluminum Company of Canada, Limited completed the first stage—involving the installation of 450,000 h.p. generating capacity—of its \$550,000,000 Kitimat-

Kemano project and at the end of the review period was engaged in a \$45,000,000 expansion program to add 60,000 metric tons of aluminum ingots a year to the initial capacity of 91,500 metric tons. Ultimate hydro power capacity of the project is 2,240,000 h.p. which will support an output of 500,000 metric tons of aluminum a year. A still greater project, and one that will prove a great boon to the Province's mineral industry in general, is being planned by Frobisher Limited and Ventures Limited. It involves the utilization of water power resources in northern British Columbia and Yukon Territory for the development of 4,500,000 h.p. for the large scale treatment of ores from Canadian and world sources.

Under the impetus of improved base metal prices, the tempo of metal mining activity quickened in the Province during the review period, lifting the industry from the doldrums into which it had been forced by low metal prices in 1953 and early 1954. Probably the event of greatest significance to the industry was the decision of the United States Government to stockpile more lead and zinc rather than create tariffs on these metals. The total value of metal production in 1954 was \$799,916,306, an increase of 12.8 p.c. over 1953.

In 1954 British Columbia accounted for 79 p.c. of Canada's production of lead and 40 p.c. of its zinc. Lead production increased from 148,817 tons valued at \$38,472,000 in 1953 to 171,768 tons valued at \$45,793,000 but zinc declined from 191,150 tons valued at \$45,723,000 to 151,538 tons valued at \$36,309,000. Although Consolidated Mining and Smelting Company maintained a 20 p.c. reduction in its output of refined zinc throughout the review period, it raised mill capacity at its Tulsequah mine in northwestern British Columbia from 300 to 500 tons a day and brought its H.B. zinc-lead mine in the Salmo area into production in June 1955. By that date the Company had put the finishing touches to its extensive modernization and expansion program which included an addition to the electrolytic zinc plant and the modernization of the lead smelter, both at Trail. (This Company also produces silver, tin, antimonial lead, bismuth, cadmium, indium, gold, ammonia, sulphuric acid, fertilizers, and other chemical products.) At other properties, Canadian Exploration Limited, a subsidiary of Placer Development Limited, continued to operate its Jersey lead-zinc mine near Salmo at about 1,000 tons a day, 55 p.c. of the mill capacity. Giant Mascot Mines Limited near Spillimacheen enlarged its zinc producing capacity and resumed the production of zinc concentrate which had been discontinued early in 1953. Sheep Creek Gold Mines Limited brought its zinc-lead-silver Mineral King mine in the Lake Windermere district into production in mid-1954.

Little change was noted in the output of copper which in 1954 amounted to 25,088 tons valued at \$14,544,000. Production continued to come from The Granby Consolidated Mining, Smelting and Power Company Limited near Princeton and from Britannia Mining and Smelting Company Limited on Howe Sound. Several copper properties were under development, particularly along the coast, one of these being Granduc Mines Limited 25 miles northwest of Stewart. Reserves of over 15,000,000 tons were indicated at the property a few miles east of the Alaska boundary and various plans for providing access to the copper at a low cost are under study.

The output of tungsten declined in 1953 from 2,396,000 lb., valued at \$5,556,000 to 2,171,000 lb. in 1954, valued at \$5,796,000, because of the closing of the Red Rose mine of Western Tungsten Copper Mines Limited south of Hazelton. Canadian Exploration, the major producer, continued to modernize and expand productive facilities at its property near Salmo.

Japan's dollar shortage and that country's resultant curtailment of imports of Canadian iron ore led to a reduction in the output from the Iron Hill mine of the Argonaut Mining Company Limited and from the properties of Texada Mines Limited on Texada Island. The latter Company maintained its shipments at approximately the same level as in 1953 (332,000 tons) because of a long term overseas contract but Argonaut was forced to suspend operations in 1954 and its output that year was only 164,000 tons compared with 554,000 tons in 1953. New contracts led to a resumption of production and shipments in April 1955.

Gold output was down slightly from 1953 to 256,274 oz. t. valued at \$8,731,000. The four lodé gold producers—Bralorne Mines Limited, Kelowna Mines Hedley Limited, Pioneer Gold Mines of British Columbia Limited and The Cariboo Gold Quartz Mining Company Limited—accounted for 78 p.c. of the total gold output in 1954, the remainder coming from placer and base metal operations.

Most of the output of silver, which increased to 10,826,000 oz. t. valued at \$9,013,000 from 9,309,000 oz. t. valued at \$7,820,000 in 1953, came from base metal operations, the chief source being the Sullivan mine.

The Prairie Provinces.—Until recently metal production in the Prairie Provinces was confined to the Flin Flon mine of Hudson Bay Mining and Smelting Company Limited on the Manitoba-Saskatchewan boundary and to a subsidiary base metal producer and two gold producers, all in Manitoba. With the exception of a minor output of placer gold, Alberta, which lies almost entirely in the Interior Plains region, has no metal production. During the past few years however Manitoba and Saskatchewan have each witnessed the development of great new metal mining industries: in Manitoba, a base metal industry at Lynn Lake in the northern part of the Province and in Saskatchewan a uranium industry in the Beaverlodge area north of Lake Athabasca. The uranium area's first producer, the Ace-Fay mine of the Crown owned Eldorado Mining and Refining Limited, came into production in 1953.

In northern Manitoba production at Sherritt Gordon's Lynn Lake nickel-copper property in 1954, the mine's first full year of production, exceeded expectations and at the end of June 1955 was 1,000,000 lb. a month above the rated annual capacity of 17,000,000 lb. The Company's copper production at an initial rated output of 9,000,000 lb. annually was up proportionately. The extra nickel output was being shipped in the form of concentrates to The International Nickel Company of Canada Limited at Copper Cliff under contract to General Services Administration, a United States Government agency. In addition to recovering nickel and copper the Company's new treatment plant at Fort Saskatchewan in Alberta produces cobalt and fertilizer as a byproduct.

Meanwhile Canadian Nickel Company Limited, a subsidiary of The International Nickel Company of Canada Limited, announced its intentions late in 1954 of sinking a 1,300 foot shaft on the north side of Moak Lake about 40 miles north of Thicket Portage. For some years this Company has been actively exploring the large low grade nickel deposits in the Mystery Lake area north of the Hudson Bay Railway and during the next two years plans to spend \$2,000,000 exploring the deposit underground.

In the Beaverlodge area of northern Saskatchewan Eldorado proceeded to develop, from three shafts, various orebodies along a stretch of four miles of the St. Louis fault east from Beaverlodge Lake. Mill capacity was expanded from 400 tons a day to 700 tons a day, the extra capacity being intended for the handling of custom ore. Activity in the area reached a high level particularly when the extent of the discovery of Gunnar Mines Limited in the St. Mary's channel area became known. Three private companies—Rix-Athabasca Uranium Mines Limited, Nesbitt Labine Uranium Mines Limited, and Consolidated Nicholson Mines Limited—began to ship ore to Eldorado's Beaverlodge plant. Several operators started underground operations and several others carried out extensive exploration of their properties. Over 11,000 claims were staked in 1954 in the area.

Gunnar Mines Limited made marked progress in its preparations for initial production by September 1955 and it expected to achieve the rated capacity of 1,250 tons daily by March 1956. Initial mining will be by open pit. The Company reported that further drilling had increased the gross estimated value of the deposit to \$130,000,000 and that a contract had been arranged with Eldorado, the Crown purchase agency, for the delivery of precipitates to the value of \$76,950,000 by Mar. 31, 1962. A sulphuric acid leaching process will be used. Arrangements have been made to ship the 14,000 tons of sulphur required annually for the treatment of the ore from the gas fields of southern Alberta.

The value of metal output in Saskatchewan increased from \$48,082,000 in 1953 to \$68,216,000 in 1954 and that of Manitoba from \$25,264,000 to \$35,107,000. These increases resulted mainly from a rise in the output of copper by Hudson Bay Mining and Smelting and to new production from Sherritt Gordon. Uranium is not included as data on its production are not released.

Hudson Bay Mining and Smelting Company's production was higher in 1954 than in 1953. Copper was up 5,000 tons to 45,222 tons while the total zinc production and the amount of Special High Grade zinc made were higher than in any previous year; output (all forms) totalling 66,800 tons valued at \$15,952,000. The Company brought its Schist Lake copper-zinc mine, $3\frac{1}{2}$ miles southeast of Flin Flon, into production in August 1954 and in the same month discontinued operations at the Cuprus copper-zinc property, $7\frac{1}{2}$ miles southeast of Flin Flon, where the orebody was mined out. The Company has four new mines in the Flin Flon area under development.

Gold output in Manitoba and Saskatchewan in 1954 was 237,000 oz. t. compared with 220,000 oz. t. in 1953. More than half the output comes from base metal operations, mainly from the Flin Flon mine of Hudson Bay Mining and Smelting. Lode gold production of 114,103 oz. t. came from Nor-Acme Gold Mines Limited in the Snow Lake area and from San Antonio Gold Mines Limited in the Rice Lake area, both in Manitoba. In the latter area, Forty-Four Mines Limited, which is controlled and operated by adjoining San Antonio, began operations early in 1955.

Silver is produced as a byproduct mainly of base metal operations, the Flin Flon mine again being the chief source. Production in both provinces in 1954 amounted to 1,885,000 oz. t. compared with 1,687,000 oz. t. in 1953.

Ontario.—At no time in the history of mining in Ontario has the metal mining industry made such progress as in the period under review. New production records were established: the output of nickel for instance was greater than in 1942, the former peak; marked strides were made in the exploration and development of new properties particularly in the Manitouwadge base metal and Blind River uranium areas and prospecting activity was unparalleled, with a record 50,000 claims staked in 1954. At the end of the period the groundwork had been laid for a large scale uranium industry which promised to make Ontario a leading producer of the metal for years to come and the Province had a greatly expanded base metal production potential.

As Canada's leading metal producer Ontario in 1954 accounted for all of the Canadian output of platinum metals, cobalt and tellurium, 98 p.c. of the nickel, 54 p.c. of the gold, 47 p.c. of the copper, and 33 p.c. of the iron ore. The value of its metal output rose from \$370,596,000 in 1953 to \$395,203,000 in 1954. Nickel showed the greatest increase in volume and value of production, rising 14,317 tons valued at \$16,126,000 over 1953 to 158,009 tons valued at \$176,556,000 in 1954. Copper and gold also showed marked increases in volume and value of output but iron ore, because of a lack of demand, declined from 2,832,000 long tons in 1953 to 2,417,000 long tons.

The demand for nickel for defence and civilian use continued to outstrip supply and the two chief Canadian producers, The International Nickel Company of Canada Limited and Falconbridge Nickel Mines Limited, extended every effort to expand their production facilities in the Sudbury area to meet requirements. Deliveries of nickel in all forms by International Nickel were 141,000 tons, an increase of 15,292 tons over 1953. These deliveries were about 70 p.c. of the free world output. The Company's program of expansion has involved an expenditure of \$150,000,000 during the past decade and included the changeover from open pit and underground mining to almost all underground mining. The cessation of open pit operations is scheduled for 1956. In 1954 the Company mined 14,456,000 tons of ore of which 2,468,000 tons were from open pit operations. Ore production from the underground mines averaged more than 44,000 tons a mine-operating day. During 1954, \$30,000,000 was provided for expansion purposes including \$16,000,000 for the construction of a pyrrhotite plant near Copper Cliff for the recovery of nickel and an iron oxide product from nickel bearing sulphide concentrates.

Falconbridge Nickel Mines continued its \$55,000,000 expansion program designed to increase nickel production to 27,500 tons annually by 1960. The program includes the bringing in of six new mines, three of which—the Hardy in Levack township, the East Falconbridge in Falconbridge township and Mount Nickel in Blezard township—started production during the review period. A new concentrator at the Hardy mine was completed and the expansion of the refinery at Kristiansand in Norway to 22,500 tons of nickel annually was begun. A pilot pyrrhotite treatment plant for the recovery of nickel and a high grade synthetic iron ore, and eventually of sulphur, from low grade pyrrhotite concentrates, was also completed.

Nickel production came from three other properties in the Sudbury area: Nickel Rim Mines Limited in MacLennan township about seven miles north of Falconbridge, which sold the concentrates produced in its 500 ton mill under contract to Falconbridge Nickel Mines; Nickel Offsets Limited in Foy and Bowell townships about 20 miles north of Chelmsford, which also sold the concentrates produced in its 300 ton mill under contract to Falconbridge Nickel Mines; and Milnet Mines Limited in Parkin township about 22 miles northeast of Sudbury at which operations ceased in the latter half of 1954 when available ore was mined out.

The International Nickel Company accounts for 90 p.c. of Ontario's output of copper which in 1954 increased to 140,056 tons valued at \$80,903,000 compared with 130,583 tons valued at \$77,587,000 in 1953. The remaining copper production came from Falconbridge Nickel Mines and from Nickel Rim Mines, Nickel Offset Mines and Milnet Mines.

Developments in the Manitouwadge area of northwestern Ontario point to a substantial increase in the Province's output of copper by the spring of 1957 when Geco Mines Limited plans to bring its copper-zinc property into production at an initial daily rate of 3,300 tons. Over 14,000,000 tons of ore have been indicated in three deposits. A highway has been built into the area from Hemlo on the CPR, and shortly after the end of the period, the CNR completed a 28 mile branch line into the camp from Hillsport on its main line. The CPR is also building a branch line into the camp. Exploration of several other properties in the area disclosed interesting copper and zinc occurrences. Elsewhere, deposits, apparently of considerable extent, were discovered near Tashota on the CNR to the northwest of the Geco property by Teck Exploration Company Limited and on Timagami Lake by Temagami Mining Company Limited.

Ontario is one of Canada's richest sources of iron ore. Development activity at the various properties remained at a high level despite poor demand and indications were that Ontario's production would be in the neighbourhood of 12,000,000 tons annually by 1960. Production during the review period came from Steep Rock Iron Mines Limited and Algoma Ore Properties Limited in northwestern Ontario and, starting in May 1955 in southeastern Ontario, from the Marmora deposit of Marmoraton Mining Company Limited, a subsidiary of Bethlehem Mines Corporation. Most of the Province's output is exported to the United States where it is in demand because of its high grade and good furnace qualities. Most of the ore used in Ontario blast furnaces is imported from that country.

At Steep Rock all production came from the Hogarth open pit and amounted to 1,157,000 long tons compared with 1,301,000 long tons in 1953. Development of the Errington underground No. 1 mine which had been under way since 1950 was completed and the mine was ready for production. It will replace the Errington open pit which had reached the economic depth for open pit mining late in 1953. By June 1955 the Company had started the removal of the 50,000,000 cu. yards of silt covering the 'G' orebody lying between the Errington and Hogarth mines. Caland Ore Company Limited also proceeded to remove the silt from the 'C' orebody which it holds under lease from Steep Rock Iron Mines Limited. Production, which will eventually amount to 3,000,000 long tons annually, is expected to start in 1960.

Output from Algoma Ore Properties came from the Helen and Victoria underground mines in the Michipicoten area and in 1954 totalled 991,870 long tons compared with 1,167,000 long tons in 1953. The ore is sintered at a plant three miles from the mine. The Company continued the ore development program started late in 1953 which will make an estimated 50,000,000 tons of ore available for mining below present levels.

Marmoraton Mining Company completed the removal of 130 feet of limestone capping from its magnetite property about 40 miles east of Peterborough and began the production of a pelletized concentrate containing about 64.3 p.c. iron. Output at the rate of about 500,000 long tons a year is being shipped by train to Picton and then by boat to the parent Company's plant at Lackawanna near Buffalo, New York.

Two new sources of iron were added to the Province's available supplies during the review period. Noranda Mines Limited began the production of high grade iron oxide sinter from pyrite at its new plant at Port Robinson near Welland in southern Ontario. Production is expected to amount to 75,000 tons a year. In northern Ontario International Nickel neared the completion of the first unit of its new \$16,000,000 pyrrhotite plant near Copper Cliff from which the Company will eventually produce 1,000,000 tons of iron oxide annually, containing more than 65 p.c. iron as a byproduct. The Company scheduled shipment of its first iron ore to the steel industry before the end of 1955.

Ontario's output of cobalt comes from the cobalt and silver ores of the Cobalt-Gowganda area in northern Ontario and from the nickel-copper ores of the Sudbury district as a byproduct. Production in 1954 increased to 2,253,000 lb. valued at \$5,913,000 from 1,603,000 lb. valued at \$4,013,000 in 1953. Cobalt ore shipments from the Cobalt-Gowganda area were made mostly to Deloro Smelting and Refining Company Limited, Deloro, Ont.; a much smaller amount went to Cobalt Chemicals Limited at Cobalt. The Canadian Government's premium price plan expired on Mar. 31, 1954 but it was replaced with a similar plan involving the purchase of a limited quantity of cobalt on behalf of the United States Government. During the review period high purity electrolytic cobalt was produced for the first time in the Province at the Port Colborne refinery of The International Nickel Company.

Most of the silver comes from the Cobalt area and the remainder as a byproduct from nickel and gold mines. Output in 1954 declined to 5,444,000 oz. t. valued at \$4,532,000 from 5,155,000 oz. t. valued at \$4,330,000 in 1953.

Gold production in Ontario came from 33 gold mines in the Patricia, Thunder Bay, Porcupine, Kirkland Lake and Larder Lake areas and as a byproduct from the base metal mines in the Sudbury area. In 1954 a number of operations, including the Kerr-Addison mine, Canada's greatest gold producer, reported encouraging results from underground development work. The increase in the gold output came mainly from the Porcupine area, where most of the mines that had been on strike during the latter half of 1953 were reopened early in 1954.

Some lead and zinc production came from Jardun Mines Limited, 18 miles northeast of Sault Ste. Marie in northern Ontario, which began production in May 1955. In the Sudbury area Consolidated Sudbury Basin Mines Limited (formerly Ontario Pyrites Company Limited) continued to explore its Vermillion Lake and Errington mine properties.

The most colourful development of the period was the disclosure of very large tonnages of relatively low grade uranium ore in the Blind River district of northern Ontario and the rapid preparation for production on a large scale by the two major operators in the area, Algom Uranium Mines Limited and Pronto Uranium Mines Limited. The latter Company had reportedly outlined an orebody with a gross value of more than \$70,000,000 and had negotiated a contract with Eldorado Mining and Refining Limited for the sale of precipitates to the value of \$55,000,000 by Mar. 31, 1962. Production was to commence in September 1955 at an initial capacity of 1,000 tons a day.

Algom's two properties, Quirke Lake and Nordie Lake, were reported to have a joint gross value of more than \$300,000,000 and arrangements were made with Eldorado for the sale of concentrates valued at \$206,910,000 also, by Mar. 31, 1962. The Company

plans to bring each property into production at a daily rate of 3,000 tons, the Quirke Lake in mid-1956 and the Nordic by early 1957. Several other properties were under exploration in the Blind River area and preliminary results indicated that other orebodies may be outlined in the territory north of Lake Huron.

Encouraging results were obtained from exploration and development activity on several uranium properties in the Haliburton-Bancroft region in southeastern Ontario. At the end of the period one of these, Bicroft Uranium Mines Limited, formed from the merger of two companies operating in the area, Croft Uranium Mines Limited and Centre Lake Uranium Mines Limited, was negotiating with Eldorado for the sale of its concentrates. The Company planned to start production by September 1956 at a daily rate of 1,000 tons.

Eldorado Mining and Refining Limited installed a new refining process in its Port Hope refinery in southern Ontario to increase the recovery of uranium.

Quebec.—Quebec stands on the threshold of a most promising future in minerals. Metal mining developments in various areas leave little doubt of the Province's tremendous mineral wealth and its potentialities as a producer of iron ore and of the non-ferrous base metals in particular. Large new sources of iron ore as well as base metal prospects have been disclosed in New Quebec; developments in the Gaspé and Chibougamau areas will soon add substantial tonnages of copper to the Province's already large output, and expansion under way at most of the metal mines will be reflected in an increased production for some years to come.

In 1954 Quebec was third among the provinces in value of Canadian mineral production. Its total mining output increased 9 p.c. over 1953 to \$278,818,000 owing to the greater volume and value of metal production which rose from \$103,190,000 to \$126,213,000. Quebec is the second largest producer of copper, gold and zinc and the only producer of molybdenite, which is mined 25 miles north of Val d'Or, and of titanium ore which comes from the large deposits of ilmenite at Allard Lake. Silver, lead, selenium and bismuth make up the remainder of the Province's metal production.

Following the expenditure of over \$250,000,000 and nearly four years of unceasing effort Iron Ore Company of Canada made the first shipments of iron ore from its New Quebec-Labrador properties in June 1954. Approximately 2,119,000 long tons were produced, of which 1,782,000 tons were shipped from the port of Sept Îles to steel mills in the United States and Canada. Ninety per cent of the ore was shipped by tidewater and the remainder by way of the St. Lawrence River. The iron ore transfer terminal at Contrecoeur near Montreal was completed and iron ore shipments by way of the St. Lawrence are expected to total 1,000,000 tons in 1955 and 2,000,000 tons by 1957. The Company expects to produce 6,500,000 tons in 1955 and to arrive at an annual output of 10,000,000 tons within three years and a possible 20,000,000 tons upon the completion of the St. Lawrence Seaway.

Extensive exploration for iron ore was carried out during the review period in the Ungava Bay area and along the Labrador Trough in New Quebec and Labrador. Consolidated Fenimore Iron Mines Limited, Cyrus Eaton interests and Oceanic Iron Ore of Canada Limited are exploring concessions in the Ungava Bay area which contain large tonnages of iron bearing material of possible concentrating grade. These Companies are also studying the various problems involved in bringing their properties into production, the chief being of course transportation.

Forty miles northwest of Hull, Steel Company of Canada Limited and Pickands Mather and Company of Cleveland, U.S.A., plan to produce 500,000 tons of high grade iron ore pellets annually from an old iron mine at Bristol, output to start late in 1956.

Most of Quebec's base metal production comes from the western part of the Province, the chief source of output being the Horne mine of Noranda Mines Limited. The high price of copper and production from new properties combined to make copper the Province's leading metal in point of value. Output in 1954 increased to 83,930 tons valued at

\$48,948,000 compared with 54,920 tons valued at \$32,886,000 in 1953. Zinc increased from 100,430 tons valued at \$24,023,000 in 1953 to 107,000 tons valued at \$25,638,000 and lead declined from 9,237 tons valued at \$2,388,000 in 1953 to 7,818 tons valued at \$2,084,000 in 1954.

Noranda Mines treats ore from its Horne mine and custom ores and concentrates from other copper, gold and silver mines. It recovers the copper and precious metals from the anodes at the electrolytic copper refinery of its subsidiary, Canadian Copper Refiners Limited, Montreal East. During the review period, the Company completed its new sulphur-iron plant at Port Robinson, Ont., in which it plans to produce elemental sulphur, sulphur dioxide gas for the preparation of sulphuric acid, and iron oxide sinter from pyrite concentrates shipped from its Horne mine. Plant capacity is about 370 tons of pyrite concentrates daily from which an estimated 240 tons of sinter will be produced daily.

In another project the Company had almost completed preparations for the entry into production of the zinc-pyrite property of West Macdonald Mines Limited. The ore will be treated at the rate of 1,000 tons a day in the mill of Waite Amulet Mines, Limited, which has been redesigned as a two-circuit plant each with a daily capacity of 1,000 tons. Production from the Waite Amulet property will be reduced from 1,400 to 1,000 tons a day.

Production from Noranda's subsidiary, Gaspé Copper Mines Limited on the Gaspé peninsula, was held up pending the arrival of hydro power. Milling was started on auxiliary steam and diesel power in April 1955 at 1,000 tons daily and later increased to 1,500 tons daily. Hydro-electric power was expected to be available in August 1955 when the mine will get into full production at 6,500 tons daily. This \$40,000,000 project is about 60 miles west of the town of Gaspé where an estimated 70,000,000 tons of low grade copper ore has been outlined. Murdochville, a town named after the President of the parent Company, has been founded with all the services of modern living.

Another important source of copper and of gold, both actual and potential, is the Chibougamau area where Opemiska Copper Mines (Quebec) Limited completed its first full year of production in 1954 and a second copper-gold producer, Campbell Chibougamau Mines Limited, entered production in June 1955 at 1,750 tons a day. Opemiska shipped high grade copper concentrates containing about 7,000 tons of copper to the Noranda smelter for treatment. A third company, Chibougamau Explorers Limited, expected production in September 1955. Exploratory and development activity in the area reached record levels during the review period and hydro-electric power was delivered to the area in June 1955. A railway will be constructed from Beattyville in the Senneterre-Val d'Or district into Chibougamau and thence south to St. Felicien. Present access is by road from St. Felicien and by air.

Copper production also comes from the copper-zinc ores of Waite Amulet Mines Limited, East Sullivan Mines Limited, Quemont Mining Corporation Limited, and Normetal Mining Corporation Limited, all in western Quebec. Golden Manitou Mines Limited, a base metal and gold producer in the same area, resumed the development of a low grade copper deposit north of its main workings and scheduled production of a zinc and a copper concentrate in its converted mill for September 1955. In southern Quebec a small output of copper came from Weedon Pyrite and Copper Corporation Limited in Wolfe county and from Ascot Metals Corporation Limited in Sherbrooke county. In Brome county, Quebec Copper Corporation Limited, a subsidiary of East Sullivan Mines Limited, shipped copper concentrates containing 3,500 tons of copper to the Noranda smelter.

Barvue Mines Limited in Barraute township is the largest producer of zinc concentrates in Quebec. During the review period open pit mining operations were carried on at a rate of about 5,000 tons a day. Zinc production also came from the copper-zinc properties of Quemont, Normetal, Waite Amulet and Weedon Pyrite; the zinc-lead-copper properties of Golden Manitou and Ascot Metals, and the zinc-lead properties of Anacon Lead Mines Limited and New Calumet Mines Limited. All zinc concentrates produced in the Province are exported to the United States and Europe.

Quebec's gold production increased from 1,022,000 oz. t. valued at \$35,167,000 in 1953 to 1,099,000 oz. t. valued at \$37,428,000 in 1954. Output came from 16 lode gold mines which contributed about 72 p.c. to the production and from 11 base metal companies including Noranda and five companies that ship ore to it. No new lode gold properties came into production during the review period nor did any cease operations. Eldrich Mines Limited is sinking a 1,075 foot shaft on its property in the Noranda area.

Molybdenite production comes from Molybdenite Corporation of Canada, Limited, about 25 miles north of Val d'Or. The Company is expanding its milling rate from 400 tons daily to 500 tons daily. Shipments in 1954 increased to 376 tons compared with 162 tons in 1953. Most of the production was sold to the United States Government and the remainder went to Europe.

Quebec became Canada's first producer of lithium with the entry into production late in 1955 of Quebec Lithium Corporation's large deposit of spodumene in LaCorne township about 25 miles north of Val d'Or. A 700 foot shaft is being sunk and a mill built with a minimum capacity of 1,000 tons. A five year contract with Lithium Corporation of America Inc., covers the production of 165 tons of lithium concentrates daily.

Quebec Iron and Titanium Corporation continued to operate at Sorel its experimental smelting plant for the treatment of ilmenite ore from the deposits at Allard Lake. Production is in the form of iron and titanium dioxide concentrate. Shipments from Sorel during 1954 amounted to 118,000 tons of titanium dioxide slag containing approximately 82,000 tons of titanium dioxide, a decline from 1953 shipments. Two of the five furnaces of the treatment plant were shut down to permit investigative work directed toward obtaining greater operating efficiency and lower production costs.

The Maritime Provinces.—Metal mining activity in the Maritimes was centred mainly on the development of the properties of Brunswick Mining and Smelting Corporation Limited in the Bathurst area of New Brunswick and on widespread exploration in New Brunswick and Nova Scotia for new sources of base metals. New Brunswick, which, aside from a small output of iron ore, has had no metal mining industry of any kind, recorded its first production of base metal concentrates—lead and zinc—from the Keymet Mines Limited property 15 miles north of Bathurst.

The Province looks forward to a greatly improved economy as Brunswick Mining and Smelting pressed forward the development of the zinc-lead-pyrite Austin Brook deposit 17 miles southwest of Bathurst and the Anacon deposit of a similar type of ore five miles to the north. Combined they are estimated to contain approximately 50,000,000 tons of ore to the 1,000 foot level. Stripping of the Austin Brook deposit, from which an estimated 6,000,000 to 7,000,000 tons of ore can be recovered by open pit methods, was to be finished by the end of 1955. Underground exploration of the Anacon deposit, which will be mined entirely by underground operations, is being carried out from two levels. Production is planned on a minimum basis of 4,000 tons a day, but details hinge on the solution of the metallurgical problems involved in the treatment of the complex ore. Extensive research work is being done in a 150 ton pilot mill. Six miles to the northeast of the Brunswick Austin Brook property, New Larder "U" Island Mines Limited is sinking a 1,500 foot shaft to explore its orebody further.

Probably the most colourful development during the review period was the discovery by the American Metal Company Limited of several extensive zinc-lead-copper-pyrite orebodies on its Little River property 30 miles northwest of Newcastle. The ore is believed to be similar to the Brunswick orebodies. Drilling disclosed reserves of over 7,000,000 tons in several orebodies. Shaft sinking was started as well as investigative work on the metallurgical problems involved in the treatment of the ore.

Considerable exploratory and development work was done on two manganese properties. Strategic Materials Corporation did research near Woodstock on the production of a marketable manganese product from its low grade deposit containing large tonnages

of the ore. Canadian Manganese Mining Corporation Limited, a subsidiary of New Delhi Mines Limited, did exploratory work on its property in the Tetagouche Falls area near Bathurst.

Prospecting for uranium in New Brunswick resulted in several discoveries in widely separated localities. Two of these, one near Harvey about 25 miles southwest of Fredericton and another at Upsalquitch about 10 miles southwest of Campbellton, are being explored.

In Nova Scotia the value of metal production, all of which comes from the Stirling zinc-lead-copper mine of Mindamar Metals Corporation Limited in southern Cape Breton Island, increased from \$3,004,000 in 1953 to \$3,517,000 in 1954. Output comprised 16,985,000 lb. of zinc, 4,186,000 lb. of lead, 1,982,000 lb. of copper, 262,000 oz. t. of silver and 3,754 oz. t. of gold. Cape Breton Metals Limited did considerable work on its mining concession in the northern part of Cape Breton Island where widespread zinc occurrences were disclosed.

Newfoundland.—The chief development in metal mining during the review period was a substantial increase in the output of iron ore, resulting mainly from the entry into production of the New Quebec-Labrador properties of Iron Ore Company of Canada and to a lesser extent from the expansion under way at the Bell Island mines of Dominion Wabana Ore Limited, a subsidiary of Dominion Steel and Coal Corporation Limited. The remainder of the Province's metal production comprises zinc, lead, copper, silver and gold and comes from the operations of Buchans Mining Company Limited near Red Indian Lake in central Newfoundland. With the exception of gold the Company's output in 1954 was higher in both volume and value and, combined with the rise in the value of iron ore production, led to an increase in the value of the Province's metal production from \$27,969,000 in 1953 to \$36,747,000 in 1954. The total value of mineral production in Newfoundland in 1954 was \$42,898,000.

Iron ore production rose 40 p.c. in volume over 1953 reaching a record 3,759,000 long tons valued at \$21,749,000. Initial output by Iron Ore Company amounted to 2,119,000 long tons. (For developments in the New Quebec-Labrador iron ore fields, *see* p. 498.)

Production of direct-shipping iron ore (hematite) from Wabana mines totalled 2,526,000 long tons during 1954, an increase of 5 p.c. over 1953. Shipments however amounted to 2,156,000 long tons compared with 2,400,000 long tons in 1953 and were made as follows: the parent Company's iron and steel plant at Sydney, N.S., 556,000 long tons; United Kingdom 897,000 long tons; and West Germany 703,000 long tons. Approximately one-third of the output goes to Sydney. Dominion Wabana has contracted to sell all the remaining output during 1955 and 1956, 85 p.c. going to West Germany and the United Kingdom during the ensuing five years.

The Company continued to expand and modernize its underground and surface facilities. This included the construction of a sink-float plant to replace hand sorting of the ore and of a 9,000 foot belt conveyor to replace the present diesel truck haulage system, which will bring the total length of the Company's conveyor system to 21,500 ft. Essentially all operations are submarine, extending in some parts about four miles out under the Atlantic Ocean. Ore reserves have been estimated as high as 4,000,000,000 tons.

Buchans Mining Company milled 340,000 tons of ore in 1954. The concentrates produced contained 30,000 tons of zinc, 18,526 tons of lead, and 3,481 tons of copper compared with 28,002 tons of zinc, 17,702 tons of lead and 2,814 tons of copper in 1953. Its silver output increased from 648,000 oz. t. in 1953 to 742,000 oz. t. in 1954 but gold production declined from 7,654 oz. t. to 6,500 oz. t. for the same years. Considerable development work was done on new orebodies in the Rothermere shaft section of the mine.

Newfoundland's output of copper will be increased substantially as a result of developments in the Notre Dame Bay area on the north coast where Bathurst Mining Corporation Limited and Maritimes Mining Corporation Limited are jointly preparing two copper properties for eventual production, one at Tilt Cove on the west side of the Bay and the other at Gull Pond, 50 miles to the south. It is planned to bring the Tilt Cove property,

a former producer, into production first. Initial output of 1,000 tons by 1957 will be increased later to 2,000 tons. Exploratory drilling has outlined over 2,000,000 tons of ore averaging 2.2 p.c. copper. Several other old copper properties in the area were acquired by associated companies.

Widespread exploration was also carried on elsewhere on the Island of Newfoundland and in Labrador. Several new copper-zinc orebodies were discovered south of old workings at the York Harbour mine which was a small producer early in the century.

Subsection 2.—Industrial Minerals*

Noteworthy developments took place in the industrial mineral industries during 1955. Many of them set new production records, new deposits were opened up and new products appeared on the market. Construction activity continued at a very high level and all of the industries producing the materials of construction operated at or near capacity. Altogether about fifty industrial minerals are being produced in Canada. The highlights of that production given here will indicate the rapid advances occurring throughout the whole industrial mineral field.

Gypsum.—Production of gypsum reached a new high during the year when 4,798,200 tons valued at \$8,455,000 were shipped from Canadian quarries. This country ranks second in the world as a producer of gypsum. It is principally used by the construction industry as wallboard, wall plaster, sheathing board, lath and tile. One of the largest deposits on the North American continent came into production during 1955 when National Gypsum (Canada) Limited began shipping from its mine near Milford, N.S. This \$6,000,000 development was five years in the making from the date of the first diamond drilling. The quarry and crushing plant have a present capacity of 5,000 tons per shift. The crushed gypsum is taken 32 miles by rail to Bedford Basin and from that port is carried by ship to the Company's plants along the Atlantic Coast of the United States where it is converted into various gypsum products.

Ownership of several operating gypsum properties changed hands during the year. Victoria Gypsum Company, Limited at Little Narrows, N.S., was purchased by United States Gypsum Company, Chicago. Bellrock Gypsum Industries Limited, a Scottish company, took an option on the plant and quarry of Atlantic Gypsum Limited, of Corner Brook, Nfld., and Columbia Gypsum Company Limited of Vancouver purchased the Windermere, B.C., quarry of Columbia Gypsum Products, Incorporated, whose head office is in Spokane, Washington.

Portland Cement.—The Portland cement industry set an alltime production record in 1955 when, according to preliminary statistics, over 25,860,000 bbl. valued at more than \$64,363,000 were produced. This production however could not meet the insistent demands of the construction industry and close to 3,000,000 bbl. were imported from British, European and United States sources in an effort to overcome shortages in various parts of the country.

The program of rapid expansion in production facilities, begun early in the postwar period, continued at an accelerated pace in 1955. Canada Cement Company, Limited, which operates seven plants in five provinces and produces over 75 p.c. of the Canadian output, is building a new plant at Beachville, Ont., near Woodstock, which will have a yearly capacity of 1,500,000 bbl. and will be in operation in 1956. A new kiln, the seventh, is being added to the Company's Montreal East plant, and a new plant with an annual capacity of 1,200,000 bbl. has been completed at Fort Whyte, Man., alongside the existing plant there. Canada Cement has also nearly completed a 1,000,000 bbl. a year clinker grinding plant at Edmonton, Alta., which will grind clinker made at the Exshaw plant. This plant is so designed that it can be converted into a producing plant by the addition of a kiln. When all of these new units are in operation, Canada Cement will have a yearly productive capacity of 27,000,000 bbl. as compared with 10,000,000 bbl. in 1945.

* Prepared by M. F. Goudge, Chief, Industrial Minerals Division, Department of Mines and Technical Surveys.

The new plant of St. Lawrence Cement Company, which is situated at Villeneuve just east of Quebec City and which has a productive capacity of 1,500,000 bbl. annually, came into production in the spring of 1955. A similar plant will be built by the Company at Clarkson, Ont., west of Toronto, to be in operation early in 1957.

St. Mary's Cement Company at St. Mary's, Ont., is adding a kiln with a capacity of 750,000 bbl. a year. Inland Cement Company, financed by La Société Générale de Belgique, is building a plant at Edmonton, Alta., which will have a capacity of 1,750,000 bbl. a year. British Columbia Cement Company is adding a kiln with a capacity of 1,000,000 bbl. yearly to its Bamberton plant. Saskatchewan Cement Corporation is building a plant at Regina with a capacity of 850,000 bbl., and International Cement Company has announced its intention of building a plant at Chilliwack, B.C., with a capacity of 750,000 bbl. a year.

At the close of 1956 Canada will have a Portland cement industry capable of producing 37,000,000 bbl. annually, and when all the projected plants are in operation the capacity of the industry will be about 40,000,000 bbl. which, on a per capita basis, will far exceed that of any other nation.

Brick and Tile.—The brick industry with traditions that go back to antiquity has obtained its share of the increased business brought about by the continued upsurge in building activity. Production of brick and tile reached a new peak in 1955 when, according to preliminary statistics, the value of structural clay products made exceeded \$35,500,000. British, West German and French capital has become interested in the Canadian brick and tile industry and during 1954 and 1955 several plants were purchased with the intention of increasing the scale of production.

A new tunnel-kiln brick plant to produce buff face-brick was completed at Lantz, N.S., by L. E. Shaw, Limited during the year after tests by the Industrial Minerals Division of the Mines Branch at Ottawa proved that this clay would yield a buff brick of superior quality. It is the only large deposit known in Eastern Canada from which buff brick can be made without the addition of other materials. Extensive expansion and modernization programs are under way at many other clay products plants across the country.

Several new types of building materials are appearing on the market. Prominent among these is cellular concrete which combines lightness with strength and low thermal conductivity. The cellular concrete products at present on the market in Canada are precast units which have been cured in autoclaves. Pre-stressed concrete products are also coming on the market in increasing quantity, fostered by shortages of brick and steel.

Lightweight Aggregate.—The manufacture of lightweight aggregates from shale, clay and slag is also a new and rapidly growing industry in Canada, supplying the construction industry with lighter aggregates than have been available in the past. Seven plants are now making these products from clay and shale, and two plants are producing lightweight aggregates from blast furnace slag. Six other plants are producing expanded perlite from imported raw material and seven are engaged in expanding imported vermiculite. Perlite Manufacturing Corporation announced that it was preparing to produce perlite for the Canadian market from large deposits in British Columbia, 25 miles south of Burns Lake station on the Canadian National Railway. Perlite is a glassy volcanic rock containing about 4 p.c. of combined water. When rapidly heated to a temperature of about 1,500° F. the water is converted into steam and the rock expands into white glassy bubbles that are less than one-tenth the weight of sand or gravel. Perlite finds its principal application in wall plaster where it serves to give a light product with improved thermal and acoustical insulating properties.

Sand and Gravel.—Important changes are taking place in this industry which in 1954 had an output valued at nearly \$59,000,000, a value exceeded only by that of nine other minerals and mineral products produced in Canada in that year. Deposits of high-grade sand and gravel are becoming increasingly difficult to find in many parts of Canada and in others are of insufficient size to provide the quantities required for large engineering

works. Also, present day specifications for sand for use in concrete call for more fines and for more precise gradation in size of the sand particles than is found in most natural deposits. This has resulted in the rise of an entirely new industry to engage in the manufacture of sand from rock. One such sand-making plant is in operation in Calgary and three others are being built adjacent to the major locks and dams of the St. Lawrence Seaway and Power Project to supply the sand for the concrete.

Barite.—Despite the loss of the market for pigment raw material which occurred when titanium dioxide supplanted lithopone as a pigment, the demand for barite remains high and the output from the deposits in Nova Scotia and British Columbia remains near the record high production of 247,227 tons established in 1953. Most of the output comes from the deposit at Walton, N.S., operated by Canadian Industrial Minerals, Limited. This deposit, which ranks as one of the world's largest, was purchased in 1955 by Magnet Cove Barium Corporation of Houston, Texas. After being crushed and washed the ore is shipped by boat to plants on the shores of the Gulf of Mexico where it is ground for use in making heavy drilling muds needed to combat the high pressures encountered in drilling deep oil wells in that area.

Salt.—Rock salt of chemical grade became available to Canadian industry from a Canadian source in August 1955 when the mine of Canadian Rock Salt Company at Ojibway, Ont., commenced production. Two and one-half years of preparatory work and over \$5,000,000 were spent to bring this project into production. Facilities are available to produce 500 tons of salt per hour from a 27 foot salt bed, 1,000 feet below the surface. The output is marketed in both eastern Canada and the eastern United States for chemical purposes and for use on highways to control dust in summer and ice in winter.

Recently Malagash Salt Company, which operates a salt mine at Malagash, N.S., found a new deposit of salt of chemical grade at nearby Pugwash, and is sinking a 400 foot shaft to the deposit with the intention of operating it.

Elsewhere in Canada salt is obtained by introducing water to deeply buried salt beds and pumping up the resulting brine. Production of salt set a new record in 1955 when 1,274,000 tons valued at \$10,286,000 were marketed.

Sulphur.—Good progress is being made in the utilization of domestic sources of sulphur. No commercial deposits of elemental or native sulphur have been found in Canada but there is an abundance of pyrite, pyrrhotite and other sulphide minerals, and also of "sour" natural gas from which sulphur is obtained. No pyrite or pyrrhotite has as yet been mined solely for its sulphur content but production is obtained from byproduct material or from gases given off during the roasting and smelting of sulphide minerals. Elemental sulphur is obtained only from sour natural gas. Production of sulphur and of sulphur compounds in terms of their sulphur content exceeded 600,000 tons in 1955. This is a record high and is over two and one-half times the production of 10 years ago.

The new sulphur and sulphuric acid plant of Noranda Mines Limited at Port Robinson, Ont., which uses byproduct pyrites as its raw material, came into production late in 1954 and in September 1955 a contract was let by Noranda Mines for the construction of the largest sulphuric acid plant in Canada at Cutler, Ont., on the north shore of Georgian Bay. This plant will supply sulphuric acid to the uranium mills of the Blind River district and sulphur to the pulp mills of Northern Ontario. The same process will be used as at Port Robinson and the estimated daily output will be 500 tons of sulphuric acid, 70 tons of elemental sulphur and 350 tons of pure iron sinter.

The production of elemental sulphur from sour gas in Western Canada is increasing rapidly. Shell Oil Company of Canada Limited has increased the capacity of its plant at Jumping Pound, Alta., to 80 tons a day. Canadian Gulf Oil Company has started construction on a new gas treatment and sulphur recovery plant at Pincher Creek, Alta., which, when completed in September 1956, will produce 225 tons of sulphur per day.

After the Trans-Canada gas pipeline is completed, this plant will be enlarged and be capable of producing at least three times as much sulphur. In the near future western Canada may produce over one-half million tons of sulphur annually, a potential that is attracting the attention of major sulphur producing companies in other countries.

Lithium.—A great deal of interest is at present being taken in lithium compounds and much of that interest is centred in developments in Canada. A very large deposit of spodumene—lithium aluminium silicate—has been proved by Quebec Lithium Corporation in the Amos-Val d'Or area of Quebec. A 525 foot shaft was completed in June 1955 and a mill producing 165 tons of spodumene concentrates per day is now in production. These concentrates are exported to Lithium Corporation of America on a five year contract.

In Ontario spodumene was discovered in 1955 in the area between the Nipigon River and Port Arthur and several well-known mining companies are investigating those finds. In Manitoba active exploration is taking place in the Winnipeg River-Cat Lake area where Violamac Mines Limited has reported the development of a large tonnage of spodumene.

Asbestos.—The effects of the great expansion in productive capacity carried out during the past several years is shown in the record production of 1,055,000 tons of fibre valued at \$98,691,000 in 1955. For the first time the value of asbestos produced exceeded that of coal in the same period. Expansion in milling capacity is still in process by a number of the producers and preparations are being made to forsake open pit mining for the block caving system of underground mining as the open pits become worked to their economical limits.

Nepheline Syenite.—Production of this white rock, which consists of a mixture of feldspar and nepheline, is rapidly increasing. It competes with feldspar as a raw material for the ceramic industry. American Nepheline Limited, the original producer of nepheline syenite, is spending \$2,500,000 on a new mill at Nephton, Ont., to produce 500 tons a day, an increase of 100 tons a day over the present plant. Canadian Flint and Spar Company Limited of Ottawa, a subsidiary of International Minerals and Chemicals Corporation of Chicago, is building a mill with an initial capacity of 250 tons a day, whose production will come from the eastern end of the same large deposit worked by American Nepheline.

Subsection 3.—Petroleum and Natural Gas*

The growth that has taken place in Canada's oil industry since 1946 is effectively indicated by the fact that known crude oil and gas liquids reserves were placed at 2,415,945,000 bbl. in 1954, a figure thirty-three times greater than that estimated in 1946, and by the fact that production in the same period increased thirteen-fold. From 1952 to 1953 the reserves figure was raised by 298,665,000 bbl. and from 1953 to 1954 by 372,397,000 bbl. In 1953 crude oil took the lead in value of production among all the minerals produced in Canada and retained that lead in 1954.

Alberta accounts for about 90 p.c. of Canadian oil production, Saskatchewan and Manitoba for about 9 p.c. and Eastern Canada for less than 1 p.c.† The following figures show the number of active oil wells in each of the Prairie Provinces:—

<u>Province</u>	<u>Dec. 1953</u>	<u>June 1954</u>	<u>Dec. 1954</u>	<u>June 1955</u>
Alberta.....	4,504	4,790	5,070	5,440
Saskatchewan.....	760	881	1,094	1,359
Manitoba.....	102	168	284	406

At the end of 1954 British Columbia had almost 100 gas wells awaiting market outlets; Alberta had 471 gas wells capable of production and potential gas wells numbering 4,901; and Saskatchewan had 120 gas wells capable of production.

* Prepared under the direction of Dr. G. S. Hume, Acting Deputy Minister of the Department of Mines and Technical Surveys, by R. B. Toombs, Petroleum Engineer, Mineral Resources Division, Mines Branch.

† Crude oil and natural gas production figures are given at pp. 541-543.

Exploration and development results obtained in western Canada during the first half of 1955 indicated a new high level of activity. About 280 companies planned expenditures for the year amounting to \$400,000,000; an average of 124 seismic crews were at work covering about 260,000 sq. miles of territory, 90 of them in Alberta, the principal region of activity. There was also an increase in exploration in eastern Canada. Early in 1955 over 36,000 sq. miles were held under licence or lease by oil exploration companies and developments in southwestern Ontario oilfields and in the single field in New Brunswick showed signs of increasing the production from these sections of the country.

Details of western Canada activities in the first half of 1955 are given by provinces in the following paragraphs.

Alberta.—In Alberta exploratory drilling was carried out with success in the west-central region on the flank of the Alberta Syncline where formations of Cretaceous, Mississippian and Devonian ages were tested. Drilling in that area led to the development of the Sundre and Westward Ho oilfields and by mid-1955 pipeline transportation for these fields was being planned. West of Edmonton exploratory drilling in the Cardium sand of Upper Cretaceous age resulted in extensions to the Pembina oil area. In the Gilwood and Clear Hills districts of the Alberta Peace River region significant finds of oil were made in a formation of pre-Devonian age. In general the 1954 exploratory program was characterized by a trend from the search for Devonian reef fields towards more emphasis on exploration for Upper Cretaceous sand reservoirs of the broad stratigraphic type. In 1955 there was an important shift in exploratory drilling activity from the Pembina area westward into the area of the foothills.

Successful gas exploration in Alberta included the drilling of a well on the Savanna Creek structure, 60 miles southeast of Calgary. In this well large quantities of gas were discovered in Mississippian rocks within the eastern limits of the Canadian Rockies. Another important Mississippian gas discovery was made 13 miles south of Calgary and midway between the Turner Valley and Jumping Pound fields. Several other Mississippian gas discoveries in the foothills and adjacent areas increased the interest in exploration in this area. Within a radius of 60 miles of Edmonton a number of gas wells were successfully completed in formations of Lower Cretaceous age. One well between the Leduc and Acheson fields yielded 189,000,000 cu. feet of natural gas a day on test. Extensive drilling to test Lower Cretaceous formations was done with good results in the southeastern part of Alberta near the proposed route of the gathering system for the trans-Canada gas pipeline. A significant gas discovery was made in the Devonian D3 reef zone near Whitecourt, 110 miles northwest of Edmonton and 70 miles southeast of the Devonian oilfield at Sturgeon Lake.

Drilling to develop previously discovered oilfields was actively continued. In fact in 1955 there was more emphasis on field development drilling than on exploratory drilling, largely because of the interest in the Pembina area. The Pembina field, discovered in 1953, had over 350 oil wells by mid-1955 and was Alberta's second largest producer. This Upper Cretaceous Cardium sand field covers the greatest area of any oilfield so far discovered in the Western Hemisphere and its oil reserves may prove second only among North American fields to those of the East Texas field. By mid-1955 the field had a proven area of 670 sq. miles and half of all the drilling rigs being used for field development in Alberta were located there. Well depths ranged from 4,600 to 5,800 feet. The light gravity oil, valued at \$2.48 per bbl., is shipped to Edmonton by the 72 mile Pembina pipeline.* In the Sturgeon Lake oilfield sufficient reserves were developed to warrant construction of a pipeline to connect the field with the Trans Mountain pipeline. Drilling in the Fenn-Big Valley fields in central Alberta was the most active Devonian field work in Alberta in 1954. The Lower Cretaceous Viking sand trend, southeast of Edmonton, proved continuous and three fields were joined to form the Joarcam field. The Joffe field, six miles east of Red Deer, was a principal centre of drilling activity in 1955 and became the second largest known oil reservoir in the Viking sand.

* Details on pipelines are given in Chapter XIX, Transportation.

In keeping with good conservation practice, engineering techniques to conserve oil reservoir energy have been adopted at the Leduc, Golden Spike and Turner Valley fields and plans for other fields were under study in 1955. Such engineering techniques, which may involve the injection of either water or gas into the producing formation, insure a maximum recovery of oil.

Increasing attention is also being given to "wet gas" processing. In 1955 there were eight gas conservation plants in Alberta having a total daily capacity of 332,000,000 cu. feet of natural gas. These plants are designed to recover propane, butane and pentane; two of them also treat sulphur bearing natural gas for the recovery of sulphur.

Saskatchewan.—In 1954 there was a marked increase in drilling activity in the south-eastern part of Saskatchewan. Although there has been general exploratory activity throughout the southern part of the Province, south of Saskatoon, production prior to 1954 came largely from an area west of a line through Swift Current and Rosetown with the Lloydminster field marking the northern extent of the area. In this western area oil and gas production is obtained in large part from sands of Jurassic and Cretaceous ages.

In southeastern Saskatchewan the Midale field discovery of 1953 led to a series of other discoveries in limestone formations of Mississippian age during 1954 and 1955. By mid-1955 eight fields having a total of 96 wells had been defined. These fields produce a light-gravity oil, comparable to Alberta oil, from formations in the depth range of 3,500 to 4,600 feet. The rather small and isolated fields have required detailed drilling but the number discovered in a relatively short time has attracted much interest to this part of the Province.

Near Swift Current a total of 195 wells had been completed by mid-1955 in three of Saskatchewan's largest fields—Fosterton, Cantuar, and Success—and the medium-gravity oil from these Lower Cretaceous-Jurassic fields was being transported by pipeline to a United States refinery near St. Paul, Minnesota. The Coleville field near Kindersley, which is Saskatchewan's largest field, had 195 oil wells producing from a sand formation of Mississippian age. The oil is the heavy type similar to that produced in the Lloydminster field. The Smiley Viking sand field adjacent to the Coleville field remained the largest light-gravity oilfield in Saskatchewan and had 127 wells by mid-1955. Pressure maintenance programs for four oilfields were being planned during 1955 to insure maximum oil recovery.

Lower Cretaceous Viking sands of the Coleville-Smiley and the Brock fields are the argest sources of natural gas in the Province. In 1955 gas service from these fields was being extended northward from Saskatoon to Prince Albert.

Manitoba.—Oilfields in Manitoba centre on the town of Virden and oil occurrences so far discovered are Mississippian in age. Exploration continued throughout the south-eastern part of the Province with the principal objective of testing limestone formations which have a depth range of 1,700 to 2,600 feet. The relative shallowness of oil occurrences and the ready access to market of the light-gravity oil produced have been incentives to exploration. Manitoba recorded the greatest percentage increase of any province in drilling and production for the year 1954. A water injection program instituted in the Daly field in 1953 has proved effective and by 1955 a doubling of the ultimate recovery percentage was assured.

British Columbia.—New gas fields discovered included West Buick Creek, Montney, Red Creek, North Beaton, Gates and Nig Creek. In further development of the Fort St. John field, British Columbia's largest gas source, seven productive gas zones were found during the drilling of a deep well in 1954 and the well when completed in a formation of Permo-Pennsylvanian age was found to have a daily open flow of 71,000,000 cu. feet.

Northwest Territories.—Exploration for oil and gas increased but production as yet comes only from the Norman Wells field which was first discovered in 1920 and developed to its present stage during World War II. The first gas discovery outside of this field was made in 1955 at a location 50 miles southwest of Fort Providence.

Petroleum Refining and Marketing.—Expansion of the petroleum refining industry has paralleled the increase in crude oil production; in 1955 the crude oil capacity on a calendar day basis was close to 600,000 bbl., compared with 200,000 bbl. in 1939. More efficient refining operations and the production of higher octane gasolines have been made possible by a general cross-country installation of catalytic cracking units. More recently, most of the larger refineries have also started the installation of catalytic reforming units.

The extent of the increase in crude oil production and petroleum refining capacity is shown in the following tabulation:—

PERCENTAGES OF CANADIAN CRUDE OIL RECEIVED AT REFINERIES

<u>Region</u>	<u>1939</u>	<u>1946</u>	<u>1950</u>	<u>1954</u>
	<u>p. c.</u>	<u>p. c.</u>	<u>p. c.</u>	<u>p. c.</u>
Maritime Provinces.....	—	—	—	—
Quebec.....	—	—	—	—
Ontario.....	0.4	0.5	1	80
Prairie Provinces and Northwest Territories.....	37.0	52.5	99	100
British Columbia.....	—	—	—	88
CANADA.....	3.5	10.0	24.4	54.7
Canadian refinery capacity (barrels per calendar day).	200,020	245,865	358,875	544,750

The above Statement also indicates the progress made in the marketing of Canadian crude oil. In 1954 Prairie Provinces refineries were using domestic crude oil only, British Columbia refineries switched from imported to Canadian crude and Ontario refineries reduced their imports to one-fifth of total requirements. During 1954 Canadian refineries received 169,452,850 bbl. of crude oil of which 92,679,819 bbl., or 54.7 p.c., were from Canadian sources. The 1953 Canadian source supply was 46.0 p.c.

Total crude oil exports in 1954 amounted to only 2,344,948 bbl. In 1955 with two new United States refineries—one in the Puget Sound area of the State of Washington and another near St. Paul, Minnesota—drawing on Canadian crude sources, an appreciable increase in exports was recorded and a daily average of at least 50,000 bbl. estimated.

In 1954 actual daily crude oil production averaged 262,000 bbl., potential production had risen to about 420,000 bbl. a day by the end of the year and oil requirements for the year averaged 559,000 bbl. a day. Discovery, production and consumption trends during 1955 indicated a steady closing of the gap between potential production and oil requirements but a widening of the margin between actual and potential production. Because of the long pipeline transportation distance western Canada crude oil is not competitive with foreign crudes in the Quebec and Maritimes markets even though Canadian field prices are lower than prices of similar crudes elsewhere in the Western Hemisphere. Canadian producers must therefore rely on the growing domestic market stretching from British Columbia to Ontario and seek additional United States markets in areas within range of economic transportation.

Subsection 4.—Coal

Production of coal in Canada continued to decline during the period July 1954 to June 1955 in the face of increasing competition for markets from crude petroleum and natural gas. One of the immediate results of the falling demand for coal was the closing of No. 1B Colliery of Dominion Steel and Coal Corporation at Glace Bay, N.S., on June 30, 1955. Over 700 men were employed in this one colliery.

In 1954 the industry recorded its fourth consecutive substantial decrease in production, recording a decline of over 987,094 tons from the 1953 level to 14,914,000 tons valued at \$96,600,000. Nova Scotia contributed about 39 p.c. of the total production, Alberta 33 p.c., Saskatchewan 14 p.c., British Columbia 9 p.c. and New Brunswick 5 p.c. The decline was greatest in Alberta where it amounted to 18 p.c., British Columbia being next with 13 p.c. Output in Nova Scotia, New Brunswick and Saskatchewan was slightly higher than in 1953.

Canada's consumption of coal in 1954 declined 5,352,000 tons to 32,788,000 tons mainly because of the continued substitution of fuel oil, diesel oil and natural gas for coal in domestic and building heating, for railway use and power production. About 56 p.c. of the coal consumed was imported compared with 60 p.c. in 1953. The reduction was mainly in bituminous coal imported from the United States. Coal sales made by retail fuel dealers decreased 4 p.c., coal used for industrial purposes decreased 9 p.c. and railway consumption 22 p.c. The latter decline was partly the result of less traffic but was mainly attributable to the conversion of steam locomotives from coal to oil and to the steadily increasing use of diesel locomotives. In 1954 the CNR reported the delivery of 100 additional diesel electric locomotives and the CPR had 44 on order. The CPR also ordered an additional 100 units which, when delivered, will bring its total number of diesel locomotives in use to 509.

The use of oil for domestic and building heating purposes has increased by over 140 p.c. since 1947 while the consumption of coal and coke has decreased by about 32 p.c. for the same period on a weight basis. During 1947 the oil consumed estimated as the heat equivalent in terms of coal amounted to 20.3 p.c. of the total fuel used; by 1954 this amounted to over 42 p.c.

The consumption of briquettes increased from 836,000 tons in 1953 to 962,000 tons in 1954, of which 72 p.c. was for railway use. However the steady changeover from coal to oil burning locomotives led to the closing of one of the major locomotive briquette producers in Alberta.

The coal industry is endeavouring to maintain its present market position by reducing costs of production and by producing better coal. Underground operations have been mechanized to a great extent and eastern collieries particularly have been assisted by the use of the Dosco Miner, a machine developed by the Dominion Steel and Coal Corporation of Nova Scotia which is capable of cutting coal from the longwall face without the aid of explosives and of loading it onto conveyors at the rate of 500 tons per eight hour shift. The more extensive use of strip mining methods is also a cost saver. Strip mining is practised in all provinces except Nova Scotia and about 34 p.c. of the 1954 output was produced by this method. Practically all of the output in Saskatchewan was strip mined, 44 p.c. in Alberta, 76 p.c. in New Brunswick and 18 p.c. in British Columbia. On an average the output per man-day in strip mining was 12.5 tons compared with 2.6 tons for underground.

In its efforts to produce better quality coals the industry continued to direct its attention to the use of modern methods of beneficiation such as cleaning, drying, dust-proofing, freeze-proofing and the briquetting of fines. The beneficiation of fines continues to be a major problem and during 1954 additional equipment for the cleaning and drying of fines was installed at certain western collieries.

The federal Department of Mines and Technical Surveys assists the industry by carrying out a group of research projects directed at developing uses for the finer sizes of western Canadian bituminous coals that are particularly friable. One such project relates to the use of coal fines in the metallurgical industry. The Department also is continuing the study of the phenomena of bumps and outbursts occurring in certain coal mines in western Canada and in the Maritimes with the long range objective of evaluating the causes of these phenomena so that mining at depth may be made safe and economical. Detailed stratigraphic and palaeontological studies have been conducted in or near coal-fields of Nova Scotia and New Brunswick to assist in the precise correlation of coal bearing

strata and their contained coal seams. The Department maintains an office at Sydney, N.S., in co-operation with the Nova Scotia Department of Mines and the Nova Scotia Research Foundation to assist in the development and prolong the production life of the Sydney coalfield.

Details on coal in the respective coal producing provinces, follow:

Nova Scotia and New Brunswick.—Nova Scotia produces high-volatile and medium-volatile bituminous coking coals in the Sydney, Cumberland and Pictou areas and some non-coking bituminous coal in the Inverness area. Volume of production in 1954 was slightly higher than in 1953, amounting to 5,843,000 tons valued at \$51,938,000.

Many of the major operations have been mechanized in order to reduce production costs. Several Dosco Miners are in use and a number of new wash plants have been built to clean, size and oil the coal to meet marketing specifications. Dominion Steel and Coal Corporation, the largest operator, temporarily halted the construction of a 6,225 foot inclined tunnel into its submarine workings at Glace Bay which was started a few years ago to increase output and reduce transportation costs. It was planned to equip the tunnel with a belt-conveyor system to bring the coal to surface and a single track road for use in transporting men and material to and from the surface by rope haulage. A similar tunnel is being built at the Princess Colliery at Sydney Mines.

New Brunswick coal output comes mainly from the Minto area and in 1954 amounted to 781,000 tons of high-volatile bituminous coal compared with 721,000 tons in 1953. A minor tonnage came from the Beersville area.

Much of the output from the two provinces is used locally for industrial and domestic purposes. The remainder, amounting to 39 p.c. of the output in 1954, is shipped to central Canada for commercial and railway use.

Saskatchewan.—This Province produces only lignite coal, chiefly from the Bienfait and Roche Percee fields in the Souris area. Production in 1954 amounted to 2,117,000 tons valued at \$3,962,000 compared with 2,021,000 tons valued at \$3,834,000 in 1953. Approximately 53 p.c. of the output in 1954 was shipped to Manitoba for domestic and industrial use. The output of briquettes, which are made from carbonized lignite and are used entirely for domestic purposes, amounted to 41,000 tons in 1954, a slight decline from the 1953 production.

Alberta.—Alberta produces almost all types of coal including a relatively small tonnage of semi-anthracite which in 1954 came from the Cascade area. Coking bituminous coal ranging from high to low volatile is produced in the Crowsnest, Nordegg and Mountain Park areas, mainly for railway and industrial consumption. Lower rank bituminous non-coking coals are produced in the Lethbridge, Coalspur and Saunders areas and in several other areas of the foothills. The coal in the Drumheller, Edmonton, Brooks, Camrose, Castor and Carbon areas is classed as subbituminous and that in the Tofield, Redcliff and several other areas is on the border of subbituminous and lignite. These coals are used mainly for domestic and commercial purposes but an increasing proportion is being used industrially.

Production declined from 5,917,000 tons valued at \$32,110,000 in 1953 to 4,871,000 tons valued at \$26,569,000 in 1954. Since the discovery of the Leduc oil field in 1947 coal output in Alberta has declined 40 p.c. from a production of 8,071,000 tons, a clear illustration of the marked inroads made by crude petroleum into coal marketing outlets. About 49 p.c. of the output in 1954 was bituminous and 51 p.c. subbituminous and lignite, mainly the former. During the review period the only operating mine in the Nordegg area suspended operations and the one remaining in operation in the Mountain Park area curtailed production.

The output of briquettes, which are made from the semi-anthracite coals of the Cascade area and the medium-volatile bituminous coals of the Crowsnest and Mountain Park areas, amounted to 637,000 tons in 1954 compared with 666,000 tons in 1953.

British Columbia.—Bituminous coking coal, ranging from high to low volatile, is mined on Vancouver Island and in the East Kootenay (Crowsnest), Telkwa and Nicola areas. Small quantities of subbituminous coal have been produced in the Princeton field.

Production in 1954 amounted to 1,258,000 tons valued at \$7,735,000 compared with 1,443,000 tons valued at \$8,863,000 in 1953. Output in 1954 was 29 p.c. lower than in 1947, the year in which the Leduc oilfield was discovered.

Medium-temperature oven (byproduct) coke for industrial consumption is manufactured chiefly in the Crowsnest area. A new briquetting plant started operations in the area during 1953 and in 1954 produced over 150,000 tons of railway briquettes from the medium-volatile bituminous coals of the area.

Section 2.—Government Aid to the Mineral Industry*

Subsection 1.—Federal Government Aid

The Department of Mines and Technical Surveys.—The Federal Department of Mines and Technical Surveys came into being on Jan. 20, 1950 in the reorganization of the former Department of Mines and Resources. The Department has five branches—Surveys and Mapping Branch, Geological Survey of Canada, Mines Branch, Dominion Observatories, and Geographical Branch. The Department's functions include the administration of the Emergency Gold Mining Assistance Act and of the Explosives Act.

Surveys and Mapping Branch.—The Branch provides the base maps required for use in the development of Canada's natural resources, produces and distributes all Canadian aids to navigation, is responsible for legal surveys of federal lands and provides a national system of levelling and precision surveys for use as geodetic control by federal, provincial and private agencies.

The Geodetic Survey provides the original surveys that form the framework or basic control for mapping throughout Canada and for engineering and surveying projects related to natural resources development. Survey stations are established at fairly regular intervals across Canada and are marked by permanent monuments whose latitudes, longitudes and elevations above mean sea level are determined with a high degree of accuracy. The determination of geographical position by astronomical observations for mapping purposes in northern areas is being superseded by Shoran trilateration in which the adaptation of radar is meeting with success.

The Topographical Survey provides topographical maps that show all significant natural and artificial features fundamental to the study and economic development of mineral and other natural resources. The Field Survey Section is responsible for the field surveys that provide ground control for mapping from aerial photographs, and the Air Survey Section plots and produces maps from these aerial photographs. The National Air Photographic Library indexes, preserves and distributes prints for all aerial photography done by or for the Federal Government. The Topographical Survey also administers the Canadian Board on Geographical Names.

The Legal Surveys and Aeronautical Charts Division makes and records legal surveys of federal Crown lands in the Yukon and Northwest Territories, the National Parks and Indian lands and reserves. This Division prepares aeronautical charts (for which the preparation of base maps involves planimetry derived from tri-camera aerial photography and altimetry derived from radar measurements) and electoral maps and prepares and distributes flight manuals.

The Canadian Hydrographic Service is responsible for the charting of the coastal and inland navigable waters of Canada, the analyses of tides and tidal current phenomena and the investigation of water-surface elevations of the St. Lawrence-Great Lakes waterway. The resultant data are published in the form of official navigation charts, volumes of Sailing Directions, Tide Tables and Water Level Bulletins.

* Revised under the direction of Dr. G. S. Hume, Acting Deputy Minister, in the Editorial and Information Division, Department of Mines and Technical Surveys, Ottawa.

The Map Compilation and Reproduction Division prepares, draughts and reproduces maps, charts and plans for lithographic printing in multicolour. The work includes the preparation and photo-reproduction of air chart bases, the reproduction and printing of air information for aeronautical charts, the preparation and printing of topographical maps and the reproduction and printing of hydrographic charts.

The Branch had 18 geodetic, 25 topographic, 12 legal survey and 18 hydrographic parties in the field in 1955.

Geological Survey of Canada.—The primary function of the Geological Survey is to obtain information on the geology of Canada that will be of assistance in the search for and development of mineral deposits. The results of its activities also provide a basis for the appraisal and conservation of Canada's mineral resources generally, including water supplies, for soil surveys and for the solution of geological problems that frequently arise in construction projects. Reports issued by the Geological Survey include: memoirs with fairly complete descriptive accounts of the geology of particular areas, accompanied as a rule by geological maps; bulletins dealing with problems rather than areas; papers issued as soon as possible after the close of the field season, treating separately of each area and summarizing the information acquired; and the Economic Geology Series reports, dealing in a comprehensive way with mineral deposits of a particular type. Coloured geological maps are issued on various scales from one inch equalling a few hundred feet to one inch equalling eight or more miles, the common standard scales being one inch to one mile and one inch to four miles. Preliminary maps showing the geology in pattern are issued shortly after the field season ends for those areas where the search for metals or minerals is active.

In 1955 the Geological Survey had 70 parties in the field, 17 fewer than in 1954. However the increased use of aircraft will result in coverage of an area greatly exceeding that of any previous year and will almost complete the geological reconnaissance of the Canadian Shield in the Northwest Territories south of latitude 66°. The work undertaken included a helicopter reconnaissance of the geology of the Queen Elizabeth Islands in Canada's far north. This project, known as *Operation Franklin*, was the largest of its kind ever attempted.

The Precambrian Division is responsible for mapping and studying the rocks of the Canadian Shield and of the Arctic Islands and the Post Precambrian Division for mapping and studying the rocks of the Appalachian and Cordilleran regions and the unconsolidated materials that mantle the bedrock throughout Canada. These studies help to establish the geological history and structure of the regions and the information is used as a guide in the search for mineral deposits.

The Stratigraphy Division includes stratigraphic palæontology, the geology of fuels (oil, natural gas and coal), ground water and engineering geology, subsurface geology and research on coal. Its function is to establish the character, age, thickness and correlation of both exposed and concealed sedimentary formations and to map the distribution and structure of these formations with the object of determining the economic possibilities of prospective oil, gas and coal bearing areas of Canada.

The Mineralogy Division makes mineralogical, geochemical and petrological studies of Canadian mineral deposits and associated rocks. Laboratories provide mineral identifications for the public, supply officers of the Survey with mineralogical, geochemical and chronological data, and permit research on the genesis of ores, fuels and rocks. Systematic mineral collections are maintained and mineral and rock collections are prepared for use by prospectors and educational institutions.

The Mineral Deposits Division conducts special field studies of mineral deposits with particular regard to economic possibilities, origin and the establishment of clues for prospecting for similar deposits. Reports and other information on Canadian mineral deposits are compiled and coded and special reports on deposits and prospecting published. The Division acts as official agent of the Atomic Energy Control Board in conducting research

on uranium deposits and in receiving and compiling reports from companies operating under exploration and mining permits from the Board, and maintains a laboratory for checking radiometric assays and identifications of radioactive minerals.

The Geophysics Division gathers, studies and compiles geophysical data throughout Canada, particularly those relating to the existence of orebodies. Fundamental research is carried out in some phases of geophysical work and all electronic equipment of the Geological Survey is maintained by this Division.

Mines Branch.—The Branch is concerned in the main with the technological problems of the mineral industry and maintains well equipped ore testing, mineral dressing, fuel research, ceramic, radioactivity, industrial minerals and physical metallurgical laboratories.

The Mineral Dressing and Process Metallurgy Division serves Canada's mineral industry through tests, investigations and research on all types of Canadian ores. The main purposes of these activities are to devise economic and efficient methods of processing ores—a service of special benefit to new mining ventures and particularly to those developing low grade or complex deposits—and to assist mine operators in solving problems encountered in mill practice.

The Radioactivity Division is concerned with investigations of radioactive ores, particularly with the development and application of methods whereby marketable concentrates may be produced from individual uranium ores. The primary purposes of the Division's technical services and laboratory facilities are to help bring new properties into production by determining methods suitable for treatment of particular ores and to encourage the search for uranium deposits. Extensive experimental and development work is conducted on the treatment of ores and products from the properties of Eldorado Mining and Refining Limited, a Crown company.

The work of the Industrial Minerals Division consists of tests, research and investigative work on industrial minerals, including water used for industrial purposes. The Division makes field studies of deposits, examines industrial processes utilizing them and conducts research into methods of beneficiating minerals from deposits of marginal and submarginal quality to bring them to the standards demanded by modern industry.

The Fuels Division studies the type, quality and uses of all fuels. It makes studies of production methods largely for the purpose of devising cheaper and more efficient methods of mining, preparing, processing and utilizing coals. Work in the field or laboratories includes: the investigation of methods of mining, particularly of rock pressures in relation to the economical mining of coal at depth, and of coal preparation such as the cleaning and utilization of the low grade finer sizes of bituminous coal which predominate in Canadian mining operations; investigations into the making of coke for foundry and other metallurgical uses and into the increased use of Canadian coal in domestic stokers; high pressure hydrogenation tests on coal for the production of synthetic liquid fuel and hydrogenation as applied to the refining of oil from the bituminous sands of Alberta; and analyses of crude oils and natural gas products.

The Physical Metallurgy Division aids the metal industries through the development of new alloys, new manufacturing techniques and new applications and in activities aimed toward improving present practices in metal fabrication. It serves the Department of National Defence by extensive research and investigative work concerned broadly with the development of defence materials and prototype equipment and with the metallurgical problems of that Department. The Division also handles the metallurgical problems of the atomic energy project at Chalk River, Ont.

The Mineral Resources Division provides a mineral information service that is freely used by government departments, mining and allied industries, and others interested in mining or its significance in the Canadian economy. A mineral resources index inventory is maintained of all known occurrences and of mines, both active and potential. The Division makes economic studies of different phases of the mining industry. It gives technical advice as required for the administration of the Emergency Gold Mining Assistance Act and prepares reports on request to aid in the administration of such

matters as: tax exemptions on new mining properties; tax deductions as an encouragement to prospecting for base metals, other minerals and petroleum; and tax allowances for the drilling of deep test wells for oil in unproven fields.

*Dominion Observatories.**—The two main units of the Dominion Observatories are the Dominion Observatory at Ottawa, Ont., and the Dominion Astrophysical Observatory at Victoria, B.C. Permanent magnetic observatories are maintained at Agincourt, Ont., Meanook, Alta., and at Resolute Bay and Baker Lake, N.W.T. Seismic stations for recording earthquakes are operated at Victoria, Horseshoe Bay and Alberni, B.C.; Ottawa and Kirkland Lake, Ont.; Seven Falls and Shawinigan Falls, Que.; Halifax, N.S.; Saskatoon, Sask.; and Resolute Bay, N.W.T. (See also pp. 43-55.)

The Dominion Observatory, Ottawa, Ont., is responsible for the time service of Canada which involves nightly astronomical observations of star positions and radio broadcast services for distributing accurate time to all parts of Canada. Other astronomical activities centred at Ottawa include upper atmospheric studies by means of meteor observations, studies of the sun and its effect on earthly conditions and mathematical studies of the atmospheres of the sun and stars. The geophysical work, also administered from Ottawa, includes the magnetic survey of Canada with emphasis on aids to air and sea navigation, as well as field and observatory work of interest to the geophysical prospector. The methods of seismology are employed to study important aspects of the earth's crust in Canada and to assist in worldwide investigations of the earth's interior. Gravity observations are carried on throughout Canada with a generally similar purpose, special attention being paid to methods of locating mineral deposits.

The Dominion Astrophysical Observatory, Victoria, B.C., is devoted to fundamental research into the physical characteristics of the sun, stars, planets and the material of interstellar space. Its 73 inch reflecting telescope is one of the largest in the world and through its use many important contributions have been made to astronomical knowledge.

The Geographical Branch.—The function of the Branch is to organize and make available all the geographical data on Canada that might be of use in promoting the economic, commercial and social welfare of Canada. The work is of two kinds—the compilation of geographical material of national significance, and geographical surveys in the field. The chief project at present is the compilation of an Atlas of Canada.

The Dominion Coal Board.†—The Board was established by the Dominion Coal Board Act (R.S.C. 1952, c. 86) which was proclaimed on Oct. 21, 1947. By this Act the Board was constituted a department of government to advise on all matters relating to the production, importation, distribution and use of coal in Canada. The Board is also charged with the responsibility of advising upon and administering transportation subventions.

Accessory to these principal duties the Board is empowered to undertake research and investigations with respect to:—

- (1) the systems and methods of mining coal;
- (2) the problems and techniques of marketing and distributing coal;
- (3) the physical and chemical characteristics of coal produced in Canada with a view to developing new uses therefor;
- (4) the position of coal in relation to other forms of fuel or energy available for use in Canada;
- (5) the cost of production and distribution of coal and the accounting methods adopted or used by persons dealing in coal;
- (6) the co-ordination of the activities of Government Departments relating to coal;
- (7) such other matters as the Minister may request or as the Board may deem necessary for carrying out any of the provisions or purposes of the Act.

In addition the Dominion Coal Board Act provides authority in the event of a national fuel emergency to ensure that adequate supplies of fuel are made available to meet Canadian requirements.

* Information on the work conducted by the Dominion Observatories is given in greater detail in the special article "Geophysics in Canada", at pp. 44-47.

† Prepared under the direction of W. E. Uren, O.B.E., Chairman of the Dominion Coal Board.

At the outset the Board was concerned with the readjustment of the Canadian coal mining industry to peacetime conditions and the implementation of the recommendations of the Royal Commission on Coal (1946). On the Board's initiative, the system of transportation subventions, designed to equalize the competitive position of Canadian and imported coals in Central Canada markets, was reorganized and extended. As a result of the revised Government assistance production reached record heights and the movement of Canadian coals to the Ontario and Quebec markets from eastern and western Canada increased greatly. Employment also increased as did average production per man-day.

Starting in 1952 new economic and technological developments began to have an adverse effect on the situation. It became evident that the Canadian coal industry was being faced with problems that could not have been foreseen by the Royal Commission. The greatly expanded development of oil and natural gas in the western provinces has resulted in growing inroads by these fuels into the markets for locally produced coal. With the extension of pipelines and a plentiful supply of cheap imported residual oils the impact of competing sources of energy on coal markets throughout Canada has been increasingly felt. Dieselization of the railways and conversion of coal burning locomotives to oil has drastically cut and threatens to virtually eliminate in the not too distant future one of the main traditional outlets for Canadian coal. The situation has been made worse by other factors including increased transportation costs on the movement of Canadian coals and a widening price spread at the pithead in favour of the imported products.

As a result of these conditions, which have been aggravated by a succession of mild winters, the Canadian coal industry reached a critical stage during the past two years. The decline in coal mining has occurred despite progressive and substantial increases in the financial assistance extended to it by the Federal Government. Subvention payments have risen from \$4,600,000 in 1951-52 to \$11,300,000 in 1954-55 and in the latter year exceeded those in 1953-54 by \$1,500,000. The Board, in its studies and recommendations, has kept pace with developments and the Government, fully cognizant of the situation, is currently seeking as sound a solution as possible to the difficulties confronting the coal industry. The Board's recommendations as to a Canadian coal production policy have been under study by an ad hoc committee on coal subvention policy, composed of deputy ministers of the departments concerned, preliminary to Government decision.

As agent of the Minister of Mines and Technical Surveys the Board continued to handle applications for loans under the Maritime Coal Production Assistance Act (R.S.C. 1952, c. 179) and to administer the loans granted thereunder. The Board also continued to administer payments under the Canadian Coal Equality Act (R.S.C. 1952, c. 34) which provides a subsidy on Canadian coal used in the manufacture of coke for metallurgical purposes. During the year ended Mar. 31, 1955, 453,646 tons were bonused at a cost of \$224,555.

The Dominion Coal Board maintains a continuous review of Canada's energy requirements. An Interdepartmental Committee on Energy, composed of representatives from the Board and departments and agencies of the government concerned, has been established to centralize all information concerning sources of energy and to investigate their relation to the national economy. Furthermore the Board, in co-operation with the Division of Fuels of the Department of Mines and Technical Surveys, initiated in 1953 a series of studies on power production in Canada with the object of evaluating the possibilities for greater use of Canadian coals in the steam generation of electricity and the increased local markets for these coals that would arise from the production of more and cheaper power. The surveys are also concerned with the over-all energy demand, the interrelation of the various energy sources and the future coal requirements.

The Board since its inception has worked toward the co-ordination of the activities of various government departments and other bodies relating to coal. On the matter of technical research as related to the marketing and distributing of coal, close liaison has been maintained with the Division of Fuels of the Department of Mines and Technical Surveys. Dominion-provincial conferences on coal research have been held annually since 1949 for the purpose of co-ordination and exchange of ideas. An Interdepartmental

Committee on the Supply to the Armed Forces of Fuel and Equipment for Heating was set up in 1949 to advise on the purchase and supply of fuel to the Armed Services. In addition the Board has advised purchasing agents of government departments on questions connected with the buying of coal.

In a wider sphere the Board has met on occasion with the Coal Policy Committee of the Provincial Ministers of Mines and has given consideration to recommendations made by the latter body relating to coal. It has also kept contact with trade and other associations concerned with the various phases of the Canadian coal industry in order to foster better mutual understanding of governmental and private endeavour. Pursuant to the recommendations of the Royal Commission the Board has continued to work for a reduction of customs duties and sales tax on coal mining machinery and has maintained its efforts to create a uniform system of coal mine cost-accounting.

The Dominion Coal Board consists of seven members including the Chairman who is its Chief Executive Officer with the status of a deputy minister. The Board is responsible to and subject to the direction of the Minister of Mines and Technical Surveys.

Subsection 2.—Provincial Government Aid*

Newfoundland.—The Newfoundland Government, through its Mines Branch, provides several valuable services to those interested in prospecting and mining. It will supply certain geological maps of specific areas to interested parties. It will identify specimens sent in from Newfoundland and Labrador and will assay by chemical means those that appear to have some mineral content. If good specimens from a known area warrant it and a request is made for further help a geologist from the Department of Mines and Resources will visit the locality and give advice. Prospecting and mining permits are issued by the Department and claims are registered.

Nova Scotia.—Under the provisions of the Mines Act (R.S.N.S. 1954, c. 179), the Government of Nova Scotia may assist a mining company or operator in the sinking of shafts, slopes, deeps and winzes and the driving of adits, tunnels, crosscuts, raises and levels. This assistance may take the form of work performed under contract, the payment of bills for materials and labour or the guarantee of bank loans. Any such work must be approved by the Department of Mines. The Government is also authorized to assist the mining industry to procure power on the most economical basis and may guarantee the Nova Scotia Power Commission against any loss incurred on account of capital investments made for that purpose or revenue. Mining machinery and equipment that may be used in searching for or testing and mining minerals may be made available through the Government. Such equipment is under the direct supervision of the Chief Mining Engineer.

The Government of Nova Scotia is also empowered to make any regulations considered necessary for increasing the output of coal. Such regulations cover the appropriation, on payment, of unworked coal lands, operation of coal mines, loans or guarantees for loans. Close co-operation is maintained with the Federal Government in carrying out federal regulations made to secure increased production and economical distribution of coal from the mines of the Province.

New Brunswick.—There are five divisions under the Mines Branch of the Department of Lands and Mines. The *Mineral Lands Division* administers the disposition of Crown mineral rights including the issuing of prospecting licences, recording of mining claims, issuing of mining licences and leases and other matters pertaining thereto. Detailed and index claim maps are prepared for distribution. The *Mine Inspection and Engineering Division* administers the safety regulations governing operations under the Mining Act. Regular inspections of all mines are performed. Laboratory facilities are maintained. It is the responsibility of this Division to approve equipment used in mines. The *Geological Division* carries on general and detailed geological mapping and investigation. Maps and

* Compiled from material supplied by the Provincial Governments.

reports are prepared for distribution. Mineral and rock specimens are examined for prospectors. Preliminary examinations of mineral prospects are performed where requested and circumstances warrant. The *Mine Assessment Division* is responsible for collection of mining tax and royalties and preparation of statistics concerning mineral production. The *Bathurst Office Division* serves as recording office for northeastern New Brunswick. In addition claim maps as well as topographical, geological and aeromagnetic maps are available for inspection and distribution. The staff is prepared to provide information concerning the Mining Act and the use of various types of maps.

Quebec.—The Mining Act (R.S.Q. 1941, c. 196) authorizes the Quebec Department of Mines to build, maintain and improve roads needed for mining development. Such work is done by contract under the supervision of departmental engineers. The Act gives the Department considerable latitude in this respect. Certain major roads have been built to new mining districts and completely paid for; on the other hand if a particular property requires a branch road from an established highway the owner may be required to contribute a portion of the cost. To prevent the development of uncontrolled settlements in the vicinity of operating mines the Department regulates the use of land and permits the establishment of well organized communities. The municipal organization of such communities is jointly administered by the Department of Mines and the Department of Municipal Affairs.

The Department maintains well equipped laboratories for the benefit of prospectors, geologists, engineers and mine operators. The facilities include equipment for mineralogy, petrography, ore dressing, and analysis by wet or dry assays, spectrography or X-ray. Qualitative and mineralogical determinations are made free but quantitative analyses are made for a fee according to a tariff schedule. The Mining Act provides free coupons to be used by prospectors in paying for such analyses.

At Val d'Or in western Quebec the Department maintains a sampling and treatment plant where tests may be made on bulk samples and where precious metals may be recovered for prospectors at cost price. The treatment plant, which is fully equipped to carry out a wide variety of pilot-scale ore dressing tests, is at the disposal of mine owners who wish to establish mill-flow sheets. At Thetford Mines in the heart of the asbestos district the Department maintains a laboratory where classification of asbestos is made according to standard designations or grades. The Province has authorized the establishment of research laboratories to assist mining and metallurgical enterprises in the processes and techniques of extracting, transforming and utilizing ores.

The Department undertakes geological mapping and inspection. The work is divided between two branches, one responsible for reconnaissance (areal) mapping, the other doing detailed mapping in mining districts and inspection of individual deposits or properties. Field parties are headed by geologists or mining engineers. The published reports on these investigations are distributed free upon request. During the field season about 30 parties are maintained in different sections of the Province. Offices, in charge of resident geologists, are maintained in mining districts, to collect, preserve and compile geological information disclosed by mining explorations and individual sheets of the compilation are made available to the public.

The Department employs inspectors whose duties are almost exclusively concerned with the safety of workmen in operating mines. Two Mobile Mine Rescue Stations are also operated and a mine rescue training program conducted.

In the field of education for prospectors five-week courses at university level are organized each year at Laval and Montreal Universities. University scholarships are granted each year to deserving undergraduates and postgraduate students in mining, geology and metallurgy, thus contributing to the training of qualified engineers for the benefit of the mining industry. Lectures are given to prospectors at different localities throughout the Province.

Ontario.—The Ontario Department of Mines renders a multiplicity of services of direct assistance to the mining industry within the Province, as briefly enumerated below.

Mining Lands Branch.—This Branch handles all matters dealing with the recording of mining claims, assessment work, etc., and the final issuance of title to mining lands. As a service to the mining public individual township maps are prepared and kept up to date showing lands open for staking and recorded and patented claims therein. As new surveys are made or later data become available maps are revised in keeping with such information. District Mining Recorders maintain offices at strategic locations throughout the Province.

Geological Branch.—A continuing program of geological mapping and investigation is carried out by the geological staff of the Department. Detailed reports and geological maps of the areas studied are made available to the public. In many of the active areas of the Province resident geologists are engaged to gather and make available to the public, information concerning geological conditions, exploration and development within their respective districts. One geologist specializing in industrial minerals is maintained on the staff to examine deposits of this type, to investigate methods of treatment and recovery of such minerals and to compile data on the uses, specifications and markets for such products. Collection and dissemination of information on ground water resources is also a function of the Geological Branch. During the winter months courses of instruction for prospectors are held in various centres throughout the Province.

Laboratories Branch.—The Provincial Assay Office located in the East Block of the Parliament Buildings, Toronto, carries out wet analyses and assays of metal and rock constituents on a custom fee basis and also renders the same service free of charge to holders of valid assay coupons issued for the performance of assessment work on mining claims. The Timiskaming Testing Laboratories situated at Cobalt, in addition to performing fire assays and chemical analyses, conducts a bulk sampling plant mainly to assist the producers of the area in the marketing of the cobalt-silver ores. A Cable Testing Laboratory, wherein all hoisting ropes in use at the mines are periodically tested, is operated under the supervision of the Inspection Branch.

Inspection Branch.—The main function of this Branch is the regular examination of all operating mines, quarries, sand and gravel pits and certain metallurgical works with a view to ensuring proper conditions of health and safety to the men employed. District offices to serve the local areas are maintained in the major mining centres of the Province. Mine rescue stations in the principal mining sections are operated under the supervision of the Inspection Branch.

Exhibitions.—The Department each year presents displays pertaining to mining within the Province at such exhibitions as the Central Canada at Ottawa, the Canadian National at Toronto and at other centres from time to time.

Publications Branch.—All maps and reports of the Department are distributed through the agency of the Publications Branch located at the main office of the Department.

Library.—A mining library for the use of the Department and the public is maintained within the Department. This library is comprised mainly of publications and maps of the Federal and Provincial Governments of Canada as well as of numerous periodicals and bulletins from the United States.

Mining Roads.—The most recent service of the Department is the provision of mining roads. In general two classes of road building are envisioned under this program. The first class of road contemplated is a mining access road, financed solely by the Department, for the purpose of opening up favourable areas for exploration; the second class of road, undertaken jointly by the Department and local mining operators, is intended to assist in the provision of required service roads to such operators. Construction and supervision of the mining roads is carried out by the Department of Highways.

Manitoba.—The Mines Branch of the Manitoba Department of Mines and Natural Resources offers four main services of assistance to the mining industry: maintenance, by the Mining Recorder's office at Winnipeg and The Pas, of all records essential to the granting and retention of titles to every mineral location in Manitoba; compilation, by the geological staff of the Branch, of information pertinent to mineral occurrences of interest both in the past and the present and expansion of this information by a continuing program of geological mapping; enforcement of mine safety regulations and, by collaboration with industry, introduction of new practices such as those concerned with mine ventilation and the training of mine rescue crews which contribute to the health and welfare of mine workers; and maintenance of a chemical and assay laboratory to assist the prospector and the professional man in the classification of rocks and minerals and the evaluation of mineral occurrences.

Saskatchewan.—The assistance given to the mining industry by the Saskatchewan Government consists of: the maintenance of a geology department, under a principal geologist; resident geologists stationed in or near the principal mining areas; geological survey parties and reports; prospectors' school and prospectors' assistance plan.

The Geology Department has its headquarters at Regina. The principal geologist and staff are available at all times to give information and other help to interested parties.

A resident geologist is stationed at Uranium City so as to give all possible assistance to prospectors in this area. During the summer months geological survey parties study and map attractive areas and prepare reports which are made available to anyone interested. The prospectors' school gives basic training in geology, mineralogy and prospecting and exploration techniques to future prospectors. Prospecting has become a skilled and specialized trade and instruction in this field will help young men get a start in a profession very vital to the mining industry of Canada. The prospectors' assistance plan, which is intended to encourage prospecting, assists bona fide prospectors by way of equipment and transportation and provides technical advice regarding geologically favourable areas. Courses on identification of minerals and the use of the geiger counter are conducted at various centres in northern Saskatchewan which are largely settled by Indians and *métis*.

Alberta.—Alberta Government assistance to the mining industry is diversified in character. The Mines Division of the Department of Mines and Minerals regulates coal mines and quarries and maintains standards of safety by inspection and certification of workers. The Workmen's Compensation Board also maintains safety standards and trains mine rescue crews. The oil and gas industries are served in a similar way by the Petroleum and Natural Gas Conservation Board. Its regulatory measures however are also concerned with the prevention of waste of oil and gas resources and with giving each owner of oil and gas rights the opportunity of obtaining a fair share of production. This Board compiles periodic reports and annual records which are of invaluable assistance in oil development in Alberta. The mining industry is also served by the Research Council of Alberta which has made geological surveys of most of the Province and has carried forward projects concerned with the uses and development of minerals. The Council has studied the occurrence, uses and analysis of Alberta coals and their particular chemical and physical properties, the use of coals in the generation of power, the upgrading and the cleaning of coal and has also studied briquetting, blending, abrasion loss, shatter and crushing strength, asphalt binders and dust-proofing of coal. Studies have been made of glass sands, salt, fertilizers, cement manufacture and brick and tile manufacture.

The Province from time to time has had Commissions examine various aspects of the mining industry when it was considered that their findings would be of assistance in developing such industries. The Province, together with the Canadian Association of Oil Well Drilling Contractors and the Western Canada Petroleum Association, maintains a detailed supervisory and safety training program concerned with the drilling of oil and gas wells. Of assistance also to mining companies and oil companies are the special deductions provided for in the Alberta Corporation Income Tax Act. These follow the parallel provisions in the Federal Income Tax Act.

British Columbia.—The Department of Mines of British Columbia provides the following services: detailed geological mapping as a supplement to the work of the Geological Survey of Canada; free assaying and analytical work for prospectors registered with the Department; assistance in the field to the prospector by departmental engineers and geologists; grubstakes, limited to a maximum of \$500, for prospectors; assistance in the construction of mining roads and trails; and inspection of mines to ensure safe operating conditions.

Section 3.—Mining Legislation

Federal Mining Laws and Regulations.—The Federal Government administers the mineral lands of the Yukon Territory and the Northwest Territories as well as those within Indian reserves and in National Parks.

Mining Acts and Regulations covering the Yukon and Northwest Territories are administered by the Lands Division, Northern Administration and Lands Branch, Department of Northern Affairs and National Resources. Grants issued for federal lands (the property of the Federal Government) in these regions reserve to the Crown the mines and minerals underlying such lands.

Mining rights on vacant and certain other federal lands may be acquired by entry or lease for a period usually of 21 years, renewable for further periods of like duration, on the terms and conditions specified in the various Acts and Regulations relating to federal lands.

The disposal of minerals occurring in Indian reserves is subject to the consent of the Indians occupying the reserve and to treaties relating thereto.

The Acts and Regulations governing mining and quarrying on federal lands are summarized in Report No. 828, entitled *Mining Laws of Canada*, issued in 1950 by the Mines Branch, Department of Mines and Technical Surveys, Ottawa. This publication also lists all the laws and regulations pertaining to mining on federal lands. Copies of these individual Acts and Regulations may be obtained by applying to the Northern Administration and Lands Branch mentioned above. Another publication of interest in connection with mining regulations and available from the aforementioned Mines Branch is entitled *Summary Review of Dominion Tax and Other Legislation Affecting Mining Enterprises in Canada*.

Provincial Mining Laws and Regulations.*—All Crown mineral lands lying within the boundaries of the several provinces (with the exception of those within Indian reserves and National Parks which are under the jurisdiction of the Federal Government) are administered by the respective provincial governments.

The granting of land in any province except Ontario and Nova Scotia no longer carries with it mining rights upon or under such land. In Ontario mineral rights are expressly reserved if they are not to be included. In Nova Scotia all minerals belong to the Crown except limestone, gypsum and building materials and, in granting land from the Crown, the right to these minerals goes with the title. In Newfoundland mineral and quarry rights are expressly reserved. Some early grants in British Columbia, Alberta, Saskatchewan, Manitoba, New Brunswick, Quebec and Newfoundland also included certain mineral rights. Otherwise mining rights except in Newfoundland must be separately obtained by lease or grant from the provincial authority administering the mining laws and regulations. Mining activities may be classified as placer, general minerals (or veined minerals and bedded minerals), fuels (coal, petroleum, gas) and quarrying. Provincial mining regulations under these divisions are summarized as follows:—

Placer.—In those provinces in which placer deposits occur there are regulations defining the size of placer holdings, the terms under which they may be acquired and held and the royalties to be paid.

* Compiled from material supplied by the provincial governments.

General Minerals.—These minerals are sometimes described as quartz, lode, or minerals in place. With the exception of British Columbia the most elaborate laws and regulations apply in this division. In all provinces except Alberta a prospector's or miner's licence, valid for one year, must be obtained to search for mineral deposits, the licence being general in some areas but limited in others. A claim of promising ground of a specified size may then be staked. This claim must be recorded within a time limit and payment of recording fees made except in Quebec where no fees are required. Work to a specified value per annum must be performed upon the claim for a period of up to ten years. There is no time limit in British Columbia but \$500 assessment work, of which a survey may represent one-fifth, must be performed and recorded before a Crown grant may be obtained. In Quebec a specified number of man-days of work must be performed and the excess may be carried forward for renewals of licence. Before mining can be commenced a mining concession must be purchased for which it is necessary to produce an engineer's report indicating the presence of an orebody. The taxation applied most frequently is a percentage of net profits of producing mines or royalties. In the Province of Newfoundland the provincial mining tax has been modified since Confederation on Mar. 31, 1949 to conform with the provincial obligations under the Federal-Provincial Tax Agreement. No other form of taxation or royalty now exists.

Fuels.—In provinces where coal occurs the size of holdings is laid down, together with the conditions of work and rental under which they may be held. In Quebec ordinary mining claims give rights to all mineral substances and to their development, and stakings for combustible natural gas, salt, coal, mineral oil or naphtha, or iron sands may cover 1,280 acres per claim. Royalties are sometimes provided for. Acts or regulations govern methods of production. In the search for petroleum and natural gas an exploration permit or reservation is usually required. However in Alberta, Saskatchewan and British Columbia leases usually follow the exploration reservation whether or not any discovery of oil or gas is made because exploration costs are applicable in part on the first year's rental. In other provinces except Manitoba the discovery of oil or gas is usually prerequisite to obtaining a lease or grant of a limited area, subject to carrying out drilling obligations and paying a rental, a fee, or a royalty on production.

Quarrying.—Regulations under this heading define the size of holdings and the terms of lease or grant. On Quebec private lands the quarry belongs to the owner; on Crown lands mineral rights belong to the Crown and may be obtained in accordance with the provisions of the law although the rights to exploit peat or marl must be obtained by special licence. In British Columbia quarry rights are not reserved in Crown grants.

Copies of mining legislation including regulations and other details may be obtained from the provincial authorities concerned.

Section 4.—Statistics of Mineral Production*

The importance of mineral production as compared with other primary industries in Canada is indicated in Chapter XVII and its part in the foreign trade of Canada is dealt with in Chapter XXII.

Subsection 1.—Value and Volume of Mineral Production

Historical Statistics.—Definite records of the annual value of mineral production go back to 1886 only, although actual production began with the earliest settlements. The figures given in Table 1 are not strictly comparable throughout the whole period as minor changes have been adopted in methods of computing both the metallic content of ores sold and the valuations of the products. Earlier methods resulted in a somewhat higher value than those now in use would have shown. However the changes do not interfere with the general usefulness of the figures in showing the broad trends in the mineral industry.

* Revised in the Mining, Metallurgical and Chemical Section, Industry and Merchandising Division, Dominion Bureau of Statistics.

Except for the 1920-30 period the value of Canada's mineral production practically doubled each decade since the turn of the century. From \$64,000,000 in 1900 it rose to \$107,000,000 in 1910 and \$228,000,000 in 1920. In 1930 it was \$280,000,000, rising to \$530,000,000 in 1940, \$1,045,000,000 in 1950 and \$1,488,382,091 in 1954. Similarly, the revised index of physical volume of output from Canadian mines (*see* p. 526) advanced from 37.6 (average 1935-39 = 100) in 1920 to 63.9 in 1930 and 125.7 in 1940. In the next decade however the volume gain was not quite so rapid, the index standing at 145.4 in 1950 and 209.7 in 1954.

1.—Value of Mineral Production 1886-1954

1932.....	191,228,225	18.19						

¹ Beginning with 1931, exchange equalization on gold production is included.

² Includes value of Newfoundland production from 1949.

Current Production.—New records were established by the mineral industry in Canada during 1954 when the value of total production reached \$1,488,000,000 which was a gain of nearly \$152,000,000 or 11.4 p.c. over the \$1,336,000,000 of the preceding year. The total value in 1954 was treble that of 1944. All provinces showed greater mineral values than in 1953 and each of the classifications—metals, non-metallies, fuels, and structural materials—reached a new high in total values. Crude petroleum increased by \$43,000,000, copper was up \$25,000,000 and nickel increased nearly \$20,000,000; however a decline of \$6,000,000 was shown for coal and for zinc.

Metals produced in 1954 were valued at \$799,916,000, an increase of 12.8 p.c. over the \$709,000,000 of 1953. Gold production of 4,366,000 oz. t. valued at \$148,765,000 was higher than in 1953, although the price per ounce troy was lower. The settlement of strikes in the earlier part of the year permitted the gold mines to resume production. The production of nearly 303,000 tons of copper was encouraged by the demand which maintained the price at a fairly high level. Nickel production of 161,000 tons valued at \$180,000,000 was 12 p.c. higher in tonnage than in 1953 and lead increased from 194,000 tons to 218,000 tons, valued at \$8,000,000. The volume of zinc declined from 402,000 tons to 376,000 tons and was valued at \$90,207,000. Iron ore shipped amounted to 7,362,000 tons in 1954, a new high in Canadian output. Shipments from the new iron mines in New Quebec and Labrador counterbalanced the lessened exports to steel plants in the Great Lakes area. Silver, a byproduct of many non-ferrous metal mines, increased by 3,000,000 oz. t. over the production of 1953.

Mineral fuels were valued at \$353,000,000, an increase of nearly 12 p.c. over the \$314,181,000 in 1953. Crude petroleum continued to lead all other minerals in value of production. The output was over 96,000,000 bbl. valued at \$244,000,000. Natural gas volume was up 20,000,000 M cu. feet to 121,000,000 M cu. feet. The conversion of coal burning equipment by railroads and industry has adversely affected the coal mining industry. In 1954 the coal output was 14,914,000 tons which was nearly 1,000,000 tons lower than the preceding year.

TOTAL VALUE OF MINERAL PRODUCTION 1946-54 COMPARED WITH CERTAIN PRECEDING YEARS

PROVINCIAL DISTRIBUTION 1954

MILLIONS OF DOLLARS
800 —

The value of other non-metallic minerals was \$131,000,000. The greater portion of this was derived from the sales of 924,000 tons of asbestos valued at \$86,000,000. Salt and sulphur increased in total value and there was a greater tonnage of fluorspar and sodium sulphate shipped. Shipments of barite, gypsum, soapstone and talc were approximately the same as in the preceding year.

A new high was reached for structural materials at \$204,983,000 as compared with \$187,202,000 in 1953. The tonnage of stone increased disproportionately in 1954 owing to the large volume used in the construction of the Canso Causeway, N.S. Stone used for buildings, ballast, concrete aggregate, highways, etc., was valued at \$39,857,000.

Analysis of Current Value and Volume.—To assist in clearer and simpler interpretation of the trends in mineral production in Canada over the past ten years the percentage of the total value contributed by each principal mineral in each year is given in Table 3. Values upon which percentages in this table are based are the annual values of mineral production, expressed in Canadian currency, as shown in Tables 1 and 2.

3.—Percentage of the Total Value Contributed by Principal Minerals 1945-54

¹ Includes minor items not specified.

The total volume of mineral output attained a wartime peak in 1941 when the production index* stood at 132. Principally because of the steady recession in the mining of gold and other principal metals during the next five years the index gradually declined and reached a ten year low point of 97 in 1946. Since then, sharp gains in the production of petroleum and other non-metals together with moderate increases in metals output, resulted in a sustained advance to a record high level of 210 in 1954.

4.—Indexes of the Volume of Production of the Principal Mining Industries 1945-54

(1935-39=100)

NOTE.—Comparable figures from 1935 are given in the 1954 Year Book, p. 523.

Subsection 2.—Provincial Distribution of Mineral Production

Provincial distribution of mineral production value showed only slight changes in 1954 from the 1953 figures. Ontario still remained the leading producer with a 33.4 p.c. contribution to the total value of output (34.9 p.c. in 1953). In 1940 this Province accounted for 49.4 p.c. by value of Canada's mineral production but this percentage has since steadily declined. In 1954 Ontario led in production of cobalt, copper, gold and nickel.

Quebec and Alberta shared second place in production value in 1954 with 18.7 p.c. of the total for each province and British Columbia, which at one time ranked second, came third with 10.7 p.c. production value. Alberta gained second place with its expansion of

* The construction of this index, which is a component of the revised index of industrial production, is described in DBS Reference Paper, *Revised Index of Industrial Production, 1935-51*.

crude petroleum and natural gas output. British Columbia accounted for 78.6 p.c. of Canada's lead production value, 40.3 p.c. of zinc, and 34.8 p.c. of silver; Quebec also contributed 3.6 p.c., 28.4 p.c. and 15.8 p.c. in value to these three minerals. Nova Scotia and Saskatchewan followed with 4.9 p.c. and 4.6 p.c. of Canadian value of production, mainly from coal, barite, gypsum, sand and stone for Nova Scotia and fuels, copper, zinc, silver, sodium sulphate and pitchblende products for Saskatchewan. Newfoundland and Manitoba's share of the national mineral production value increased from 2.5 p.c. and 1.9 p.c. respectively in 1953 to 2.9 p.c. and 2.4 p.c. in 1954. New Brunswick's mineral production, valued at 0.8 p.c. of Canada's total, was derived from gypsum, peat moss, fuels and structural materials.

5.—Value of Mineral Production by Province 1945-54

NOTE.—Figures for 1899-1910 are given in the 1933 Year Book, p. 345; for 1911-28 in the 1939 edition, p. 323; and for 1929-44 in the 1946 edition, p. 323.

1 Pitchblende products, etc., are not included.

Subsection 3.—Production of Metallic Minerals

The metals of chief importance in Canada are nickel, copper, gold, zinc, lead, iron, silver and those of the platinum group. These metals are dealt with individually in the following paragraphs. In addition there are a number of metals produced in minor quantities, principally as byproducts in the treatment of metalliferous ores (see Tables 2 and 6).

Nickel.—A new high was reached in 1954 in volume and in total value of nickel produced. The 161,000 tons produced were valued at \$180,000,000 and included refined nickel, nickel in oxides and salts, and nickel in matte exported. Export shipments amounted to 91,400 tons of refined nickel and 65,800 tons of nickel in matte.

The major portion of the output came from the Sudbury, Ont., district where smelters are operated by The International Nickel Company of Canada and Falconbridge Mines Limited. Three other mines in the area shipped ore or concentrates to the Falconbridge smelter: Nickel Rim Mines, Milnet Mines, and Nickel Offsets Limited. The Sherritt Gordon Mines Limited shipped nickel and copper concentrates from the Lynn Lake mine in Manitoba to the firm's refinery at Fort Saskatchewan, Alta., and to other smelters in Ontario and Quebec.

7.—Quantity and Value of Nickel Produced 1945-54

NOTE.—Figures for 1889-1910 are given in the 1929 Year Book, p. 368; for 1911-28 in the 1939 edition, p. 342; and for 1929-44 in the 1946 edition, p. 333.

Year	Quantity	Value	Year	Quantity	Value
	tons	\$		tons	\$
1945.....	122,565	61,982,133	1950.....	123,659	112,104,685
1946.....	96,062	45,385,155	1951.....	137,903	151,269,994
1947.....	118,626	70,650,764	1952.....	140,559	151,349,438
1948.....	131,740	86,904,235	1953.....	143,643	160,430,098
1949.....	128,690	99,173,289	1954.....	161,279	180,173,392

Copper.—Copper produced in Canada in 1954 amounted to 302,700 tons valued at \$175,700,000, a 19·5 p.c. increase in volume and a 16·4 p.c. increase in value. All provinces showed increased production: greatest quantity gains were recorded in Quebec with a 52·8 p.c. increase, Manitoba 30·4 p.c., Newfoundland 23·7 p.c. and Saskatchewan 18·3 p.c. The copper mined at the newly operating Lynn Lake property helped raise the Manitoba total. Ontario mines produced about 141,000 tons and Quebec mines nearly 84,000 tons. Mines in Newfoundland and Nova Scotia exported concentrates to foreign smelters.

8.—Copper Production by Province and Total Value 1945-54

NOTE.—Figures for 1886-1910 are given in the 1916-17 Year Book, p. 272; for 1911-28 in the 1939 edition, p. 335; and for 1929-44 in the 1946 edition, p. 331.

¹ Includes one ton valued at \$536 produced in N.W.T.
² Includes 383 tons valued at \$218,663 produced in Nova Scotia and 3 tons valued at \$1,969 produced in N.W.T.

³ Includes 788 tons valued at \$471,962 produced in Nova Scotia.
⁴ Includes 991 tons valued at \$577,868 produced in Nova Scotia.

Gold.—The settlement of the labour disputes in northern Ontario and Quebec permitted a greater output of gold bearing ore. There was 4,366,440 oz. t. produced in 1954 compared with 4,055,723 oz. t. in 1953. Nearly all the provinces showed an increase in output. Gold was bought on the basis of \$35 (United States) per oz. t. and, as the Canadian dollar was at a premium through the year, the average price in Canadian funds was \$34.07.

9.—Quantity and Value of Gold Produced by Province 1945-51

NOTE.—Values are calculated at world prices in Canadian funds. Figures for 1862-1910 are given in the 1916-17 Year Book, pp. 268-269; for 1911-28 in the 1939 edition, pp. 336-337; and for 1929-44 in the 1946 edition, p. 332.

Lead.—Estimated lead production in 1954 amounted to 218,495 tons, an increase of 13 p.c. over 1953. The 1954 total included the lead in base bullion produced in Canadian smelters and the computed recoverable content of ores and concentrates exported. British Columbia accounted for 79 p.c. of the total, and its output moved up from 148,817 tons in 1953 to 171,768 tons in 1954. The Mackeno Mine in Yukon Territory and its output added to that of the United Keno Mines brought the total for the Territory to 16,883 tons. In Quebec the total production for the Province declined about 15.4 p.c. Nova Scotia's only lead producer increased its output of the preceding year by 14.6 p.c. Total refined lead production was about 166,000 tons. Canadian consumers used about 68,000 tons and 116,409 tons of piglead were exported.

10.—Quantity and Value of Lead Produced from Canadian Ores 1945-54

NOTE.—Figures for 1887-1910 are given in the 1929 Year Book, p. 367; for 1911-28 in the 1939 edition, p. 341; and for 1929-44 in the 1946 edition, p. 333.

Zinc.—The production of zinc in 1954 amounted to 376,491 tons valued at \$90,207,285, a decline of 25,271 tons from the alltime high of 401,762 tons of 1953. Average price remained about the same in both years.

In 1954 all provinces except Saskatchewan and British Columbia showed some increases in zinc production over 1953, Yukon and Ontario making the highest gains.

Refined zinc output, including zinc refined from foreign ores, amounted to 213,775 tons in 1954.

Zinc concentrates from Newfoundland, Nova Scotia and Eastern Canada were exported for treatment but a large portion of the zinc ores mined in British Columbia and some from Yukon Territory were treated in the smelter at Trail, B.C.

11.—Quantity and Value of Zinc Produced 1945-54

NOTE.—Figures for 1911-28 are given in the 1939 Year Book, p. 347, and for 1929-44 in the 1946 edition, p. 335.

¹ Estimated foreign smelter recoveries and refined zinc produced in Canada.

Iron Ore.—During 1954 the producers of iron ore shipped 7,361,598 short tons valued at \$49,666,507, an increase in both volume and value over the previous year.

In the Labrador-New Quebec area production commenced in June 1954 and the first shipment was loaded at the port of Seven Islands at the end of July.

In Ontario production came from the Hogarth open pit mine of Steep Rock Iron Mines Limited while the Errington underground mine was readied for production. Output from Algoma Oil Properties came from the Helen and Victoria underground mines in the Michipicoten area. At Marmora the stripping of the limestone overburden from the magnetite ore was nearly completed.

Mining was suspended in the Iron Hill mine in British Columbia in 1954 but the Texada mine continued production at about the same rate as previously.

12.—Iron Ore Shipments and Production of Pig-Iron, Ferro-Alloys and Steel Ingots and Castings 1945-54

NOTE.—Figures for 1886-1910 are given in the 1936 Year Book, p. 373; for 1911-28 in the 1939 edition, p. 340; and for 1929-44 in the 1946 edition, p. 333.

¹ Includes production of 1,272 tons in British Columbia.

Silver.—Silver production continued its upward trend in 1954 amounting to 31,100,000 oz. t. as compared with 28,300,000 oz. t. in 1953. The larger contributors were British Columbia with nearly 11,000,000 oz. t. and Yukon Territory with 7,000,000 oz. t. In the extreme eastern and western areas of Canada silver is recovered from silver-lead-zinc ores; in Ontario it occurs in the nickel-copper, silver-cobalt, and gold ores; in Quebec it comes from copper-gold-silver and silver-lead-zinc ores; and in Manitoba and Saskatchewan the complex ores of copper-gold-silver-zinc yield sizable quantities of silver.

13.—Quantity of Silver Produced by Province and Total Value 1945-54

NOTE.—Figures for 1887-1910 are given in the 1916-17 Year Book, p. 271; for 1911-28 in the 1939 edition, p. 345; and for 1929-43 in the 1946 edition, p. 334.

¹ Includes relatively small quantities produced in Alberta.

Metals of the Platinum Group.—Included in this group are platinum, palladium, rhodium, ruthenium and iridium. Nearly all the platinoids produced in Canada come from the nickel-copper ores in the Sudbury area of Ontario. The platinum group residues are recovered from the electrolytic tanks in the nickel refinery at Port Colborne, Ont. The nickel-copper matte shipped by Falconbridge Nickel Company Limited contains some platinum-group metals which are recovered at the refinery in Norway. Production in 1954 amounted to 154,000 oz.t. of platinum valued at \$12,900,000 and 189,000 oz.t. of palladium, rhodium, etc., valued at \$7,900,000.

The industrial uses of the platinum metals have expanded in recent years particularly for electrical and chemical equipment, jewellery, and medical and dental appliances.

14.—Quantity and Value of Platinum and Palladium¹ Produced 1945-54

NOTE.—Records of the platinum production go back to 1887 but, prior to 1921, the amounts were comparatively small and the basis of calculation was not comparable with that now used. Figures for 1921-39 are given in the 1940 Year Book, p. 340, and for 1940-44 in the 1951 edition, p. 513.

¹ Includes also iridium, rhodium, ruthenium.

² Figures include an accumulated revision for previous years.

Subsection 4.—Production of Non-metallic Minerals (excluding Fuels)

The most important minerals in this group are asbestos, gypsum, salt, and sulphur; it also includes numerous other items such as magnesitic dolomite, peat moss, quartz, sodium sulphate, fluorspar, barite, nepheline syenite, feldspar, silica brick, mica, soapstone and talc, and graphite (see Tables 2 and 6).

Asbestos.—The producers of asbestos shipped about 924,000 tons valued at \$86,400,000 in 1954 as compared with 911,000 tons worth \$86,000,000 in 1953. A modernization and expansion program was under way in Quebec and a new mine in British Columbia was progressing favourably at the end of the year.

15.—Quantity and Value of Asbestos Produced 1945-54

NOTE.—Figures for 1896-1910 are given in the 1911 Year Book, p. 424; for 1911-28 in the 1939 edition, p. 354; and for 1929-44 in the 1946 edition, p. 353.

Gypsum.—The production of gypsum was higher in 1954 than in 1953 by 109,000 tons, a result of continued demand by the building trades. Nova Scotia mines accounted for 80 p.c. of the Canadian total.

16.—Quantity of Gypsum Produced by Province and Total Value 1945-54

NOTE.—Figures for 1926-43 are given in the 1943-44 Year Book, p. 321. The 1944 figures are given in the 1955 Year Book, p. 527.

¹ Includes 8,660 tons valued at \$54,881 produced in Newfoundland.

² Includes 26,531 tons valued at \$117,208 produced in Newfoundland.

³ Includes Newfoundland production of 26,653 tons valued at \$124,385.

Salt.—Salt is obtained from brine wells in the Provinces of Ontario, Manitoba and Alberta but in Nova Scotia it is recovered by mining rock-salt and by evaporation from brine. Domestic production is sold principally to the dairy, meat-curing and canning industries, to fisheries, to highways and transport departments, to agriculturists for use as a soil sweetener, to chemical industries, and as table salt. About 50 p.c. of the salt production is used in making caustic soda, soda ash and related chemicals.

17.—Quantity of Salt Produced by Province and Total Value 1945-54

Sulphur.—Sulphur production statistics include the sulphur content of pyrite shipped and the sulphur content of the sulphuric acid and sulphur dioxide made from smelter gases. For statistical purposes the elemental sulphur, recovered during the treatment of natural gas, is not included in the mining industry as it is considered that these treatment plants are more closely allied to the chemical industry.

In 1954 the producers of sulphur shipped 532,000 tons, 174,000 tons more than in 1953; in the earlier year there were large shipments of pyrite from stockpiled production of previous years.

18.—Quantity and Value of Sulphur Produced 1945-54

NOTE.—Figures for 1926-44 are given in the 1946 Year Book, p. 355.

Subsection 5.—Production of Fuels*

Coal.—Coal mining continues to be affected adversely by the substitution of fuel oil, natural gas and electricity for heating and power purposes. Output dropped off in 1954 for the fourth successive year, amounting to 14,900,000 tons compared with 15,900,000 in 1953. The principal decline was in Alberta where output dropped to 4,859,000 tons from 5,900,000 tons in 1953. Output in Nova Scotia was 5,840,000 tons against 5,780,000 in the preceding year and there was a slight increase in Saskatchewan's production.

* Information on the coal reserves of Canada is given in the 1950 Year Book, pp. 516-518.

19.—Coal Production by Province 1945-54

NOTE.—Figures for 1874-1910 are given in the 1911 Year Book, p. 419; for 1911-28 in the 1939 edition, p. 348; and for 1929-44 in the 1946 edition, p. 347.

The sources of coal consumed in Canada in the years 1945-54 are shown in Table 22 and detailed figures of coal made available for consumption in 1953 and 1954 are given in Table 23; the difference between the totals of the two tables in the same year is accounted for by the fact that coal received may be held in bond at Canadian ports and not cleared for consumption until required, and coal received in previous years may be taken out of bond (cleared for consumption) in a later year. Normally the coal made available for consumption is greater than the apparent domestic consumption as coal is landed at Canadian ports and re-exported or ex-warehoused for ships' stores without being taken out of bond but, while remaining in bond at the port, it is available for domestic consumption if required.

22.—Consumption of Canadian and Imported Coal in Canada 1945-54

NOTE.—Figures for 1886-1910 are given in the 1921 Year Book, p. 354; for 1911-28 in the 1939 edition, p. 350; and for 1929-44 in the 1946 edition, p. 349.

¹ Coal reaching Canadian ports whether or not it is cleared through customs, exclusive of 104,216 tons of imported briquettes in 1953, and 122,966 tons in 1954.

Petroleum.—A special article on the Canadian crude petroleum situation up to the end of 1951 is given in the 1952-53 Year Book, pp. 524-527. That information is brought up to the end of 1952 in the 1954 Year Book, pp. 540-544, to June 1954 in the survey at pp. 492-494 of the 1955 edition, and to June 1955 at pp. 505-508 of the present volume. Information on oil and gas pipelines in Canada is included in Chapter XIX.

In 1954 Canadian crude oil production totalled 96,080,345 bbl., an increase of 32.8 p.c. over the 1953 production of 80,898,897 bbl. Western Canada accounted for 99 p.c. of the total and Alberta yielded 87,714,000 bbl. or 91 p.c. There was an increase in Saskatchewan in 1954 with a yield of 5,400,000 bbl., and Manitoba, which had no production previous to 1951, showed a yield of 2,148,000 bbl. in 1954.

24.—Quantity and Value of Crude Petroleum Produced by Province 1945-54

PRODUCTION OF CRUDE PETROLEUM AND NATURAL GAS FOR CANADA AND THE PROVINCE OF ALBERTA 1945—54

Natural Gas Production.—Alberta accounts for almost 90 p.c. of Canada's production of natural gas. It is estimated that the total output for all provinces was almost 121,000,000,000 cu. feet in 1954 of which 107,000,000,000 cu. feet was from Alberta wells. Ontario's production amounted to over 10,000,000,000 cu. feet in 1954. (*See also* the survey of the petroleum and natural gas industry up to June 1955, pp. 505-508, and the article on the construction of pipelines in Canada, Chapter XIX.)

25.—Quantities of Natural Gas Produced by Province 1945-54

NOTE.—Figures for 1920-28 are given in the 1940 Year Book, p. 347, and for 1929-44 in the 1946 edition, p. 350.

Subsection 6.—Production of Structural Materials

Production of structural materials is dependent upon the activity of the construction industry; output in 1954 reached a record value of \$203,980,000. This group includes clay and clay products (brick, drain tile, sewer pipe, etc.), cement, lime, sand, gravel and stone.

26.—Value of Structural Materials Produced by Province 1945-54

NOTE.—Figures for 1926-44 are given in the 1946 Year Book, p. 355.

Clay Products.—The sales value of clay products produced in 1954 was the highest recorded. Common clays suitable for the production of building bricks and tile are found in all the provinces; production is greatest in Ontario and Quebec. Stoneware clays are produced largely from the Eastend and Willows areas in Saskatchewan and shipped to Medicine Hat, Alta., where, utilizing the cheap gas fuel, they are manufactured into stoneware, sewer pipe, pottery, tableware, etc. Stoneware clay also occurs in Nova Scotia and, although it has not been developed extensively for ceramic use, some is used for pottery. Two large plants and a few small plants manufacture fireclay refractories from domestic clay in British Columbia, Saskatchewan and Nova Scotia. Deposits of high-grade, plastic, white burning clays occur in northern Ontario and deposits yielding high-grade china clay have been found along the Fraser River in British Columbia but these have not been used on a commercial scale. Ball clays of high bond strength occurring in the white mud beds of southern Saskatchewan have not been developed to any extent.

27.—Value (Total Sales) of Clay Products Produced by Province 1945-54

NOTE.—Figures for 1926-44 are given in the 1946 Year Book, p. 356.

Cement.—The production of cement has almost doubled since 1947 and imports have also been relatively high during the same period. The largest production is in Quebec and Ontario although there are active plants in most of the provinces.

28.—Quantity and Value of Production, Imports, Exports and Apparent Consumption of Cement 1945-54

NOTE.—Figures for 1910-28 are given in the 1939 Year Book, p. 356, and for 1929-44 in the 1946 edition, p. 356.

¹ 'Production' as used here means quantity and value of sales.

² The barrel of cement equals 350 lb.

Sand, Gravel and Stone.—Deposits of sand and gravel are numerous throughout Eastern Canada with the exception of Prince Edward Island where gravels are scarce. The local needs for these materials are usually supplied from the nearest deposits as their cost to the consumer is governed largely by the length of the haul. This accounts for the large number of small pits and the small number of large plants. Every province except New Brunswick and Prince Edward Island produces natural bonded sand but some grades particularly suitable for certain industries demand a much higher price than ordinary sand. Quebec and Ontario contributed 74 p.c. of the total quantity of sand and gravel in 1952. The greater part of the output is used in road improvement, concrete works and railway ballast, and most of the commercial plants are equipped for producing crushed gravel, a product that can compete with crushed stone.

The stone industry has two main divisions, stone quarrying and the stone products industry. The granite, limestone, marble, sandstone and slate quarries of Canada yield high grade structural and decorative materials and also supply requirements for chemical and other allied industries. The gross value of stone of all varieties produced in Canada in 1954 totalled \$39,857,134 as compared with \$30,613,051 in 1953.

Section 5.—Industrial Statistics of the Mineral Industry

The scope of the annual statistics on mineral production published by the Dominion Bureau of Statistics includes a general review of the principal mineral industries such as the copper-gold, silver-lead-zinc, and nickel-copper industries as well as a section on metallurgical works. Additional data published at irregular intervals include such features as numbers of employees, wages and salaries paid and net value of sales.

The figures for 'net value of shipments' of industries given in Tables 30 and 31 are, in each table, the settlements received for shipments by producers and the additional values obtained when the smelting of ores is completed in Canada, less the cost of materials, fuel, etc. The totals indicate more nearly the actual returns to the different industries than do the values for the minerals in Table 2 of this Chapter where, with respect to copper, lead, zinc and silver, values are computed by applying the average prices for the year in the principal metal markets to the total production from mines and smelters with no reduction for fuel, electricity and other supplies consumed in the production process. Some imported ores and concentrates are treated in Canadian non-ferrous smelting and refining works, especially in the production of aluminum, where imported ore only is used, and of cobalt which comes mainly from African ores. The net sales of these plants include therefore the net value of the metals recovered from these imported ores and to this extent the net sales shown in Tables 30 and 31 include products of other than Canadian origin.

Section 6.—World Production of Certain Metallic Minerals and Fuels

Table 32 shows the production of certain metallic minerals and fuels in the different countries of the world for the year 1953. These figures are taken from the *United Nations Statistical Yearbook 1954* which presents production figures for 1934-53 for a much more extensive list of mining and quarrying industries. The 1953 figures are provisional and have been converted from kilograms to ounces troy for gold and from metric tons to short tons for the other metals and fuels shown.

32.—World Production of Certain Metallic Minerals and Fuels 1953^p

NOTE.—Where dashes occur throughout this table they indicate that no figures were given in the *United Nations Statistical Yearbook*, either because there was no production or because the quantity was not available.

Section 1.—Water Power Resources and Their Development*

Canada, a land of many lakes and rivers, has been abundantly endowed by nature with great water power resources which are well distributed across the country. In most sections adequate precipitation and favourable topography result in numerous rivers on which falls and rapids frequently occur and offer excellent opportunities for the development of hydraulic power; with the exception of the prairies of the middle west, water power resources of importance are found in virtually every part of the country. In British Columbia, where precipitation is high, the rivers flowing down the Pacific slope of the Rocky Mountains offer many fine power sites. Alberta, although a prairie province, also has mountain streams from the Rockies and great reserves of undeveloped power on its large northern rivers. The Canadian Shield of Precambrian rock, which forms an arc around Hudson Bay, covers a portion of the Northwest Territories and northern Saskatchewan as well as a large part of Manitoba, Ontario, Quebec and Labrador; it is a rough, forest covered, well watered area characterized by innumerable lakes and by rivers with many falls and rapids. The water power of the Great Lakes-St. Lawrence River System forms part of the vast resources of Ontario and Quebec upon which their status as the principal manufacturing provinces of Canada is dependent and which compensate in large degree for the lack of indigenous coal. In New Brunswick, Nova Scotia and on the Island of Newfoundland precipitation is moderately heavy and the rivers, though not large, afford numerous possibilities for power developments of moderate size. In Labrador the potential resources of the Hamilton River are outstanding.

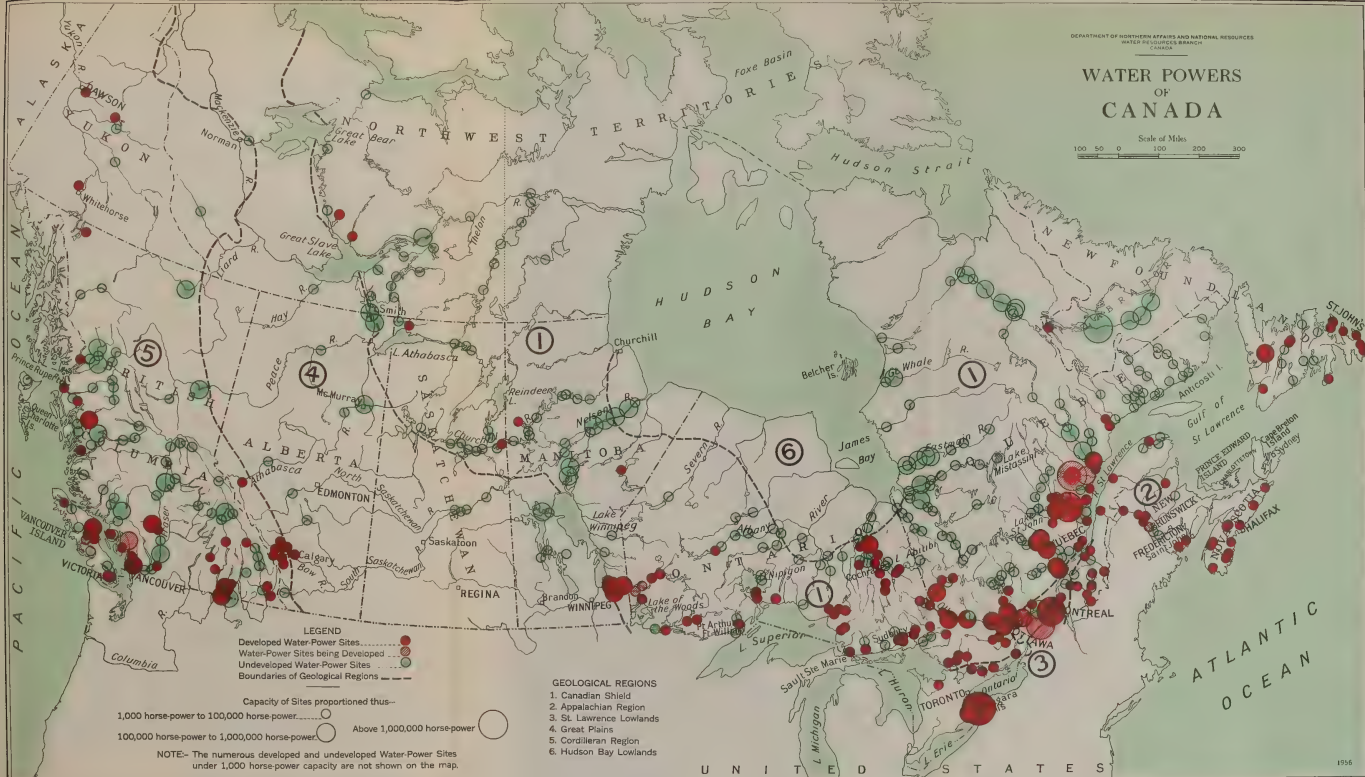

An accurate comparison of Canada's water power resources and their development with those of other countries† is not possible owing to incomplete world statistics and differing bases of tabulation. However from figures available at the end of 1953 it appears that Canada ranks second among the countries of the world in total installed capacity, being exceeded only by the United States; in installation per thousand population Canada
